DC Power Supplies

Up to K W Range. Current limit, voltage limit, filtered, highly regulated.

Error Signal Detectors

These solid state circuits are designed to drive external or built-in relays. Time delays built in to avoid tripping due to pickup signals, low hysteresis. Wide magnitude of voltage ranges available.

Gain Control Amplifiers

Automatic gain control for 400 Hz servo ste with transfer function of 26 divided by t co trol voltage. Other transfer functions av ab on request.

Gyro Wheel Supplies

Gyro Wheel Supplies can be provided t dri gyro-motors ranging in frequency from 0 3200 Hz. Units are specifically desig d drive 2 phase gyro motors and their res ct pick-off windings.

Phase shift between outputs are held to 9 ± degree. Oscillator stability is better than ' p degree C.

Manufacturer of the widest range of Frequency Control Components: Crystals ● Crystal Oscillators ● Crystal Filters ● LC Filters ● Tuning Forks Fo Oscillators ● Ovens ● Coils ● Servo Amplifiers

BULOVA SERVO PRODUCTS

DC SERVO AMPS...2.5w to 2,500w

RIES

DCAM SERIES

DCAR SERIES

Here's a line of servo amps packaged for flexibility and priced for system saving. It's another example of Bulova's unique capability in producing quality servo products at a price lower than you can make or buy.

Available from 2.5w to 2.5 Kw — Styled in flat pack, modular or rack mount — to meet industrial or mil-spec — able to operate from AC or DC — to include power supply when required.

FEATURES:

- Adjustable Gain
- Current Limiting
- Voltage or Current Feedback
- Wide Bandwidth
- Low Cost

DESIGNED TO DRIVE:

- DC Torque Motors
- Low Inertia Motors
- DC Servo Motors
- Servo Valves
- Deflection Coils

Bulova also offers a complete line of AC servo products, including servo amplifiers, modulators and demodulators, plus a line of power supplies.

DCA SERIES

UNITED TECHNICAL PUBLICATIONS

Buy CLIFTON QUALITY

ELECTRONIC MODULES

ion signs and manufactures power supplies (regulated and un-
lat), signal comparators, summing and isolation amplifiers,
le dual channel amplifiers, amplifiers and resolvers chains,
a w e variety of similar items. Call Clifton for quality electronics.

SERVO AMPLIFIERS

Clifton amplifiers include a wide variety of 0°-180° and 90° units, summing, isolation and booster amplifiers. Many of these have been especially designed to work compatibly with Clifton motors or resolvers. Call Clifton for sophisticated amplifier-resolver chains.

FLIGHT INSTRUMENTATION & CONTROL SUB-ASSEMBLIES

Clif can custom design and build flight instrumentation and serv packages to meet your special needs. As examples of our com tence, shown above are (left to right): Dual Vertical Scale DC Torquer Type Indicator, Automatic Stabilization Actuator, Dual-Channel Synchro Transmitter Amplifier, Symbolic Pictorial Indicator for Area Navigation Systems. What's your special need?

S/D, D/S CONVERTERS

Com sed of reliable, all solid state circuitry mounted on easily in-
ere ngeable printed circuit boards, these low cost converters can be
use o interface any type of synchro outputs to digital computers,
ea ts, displays or printers. Or, conversely, they can convert a
sig computer output to 3 or 4 wire synchro signals. Although de-
sig especially for the process control and machine tool fields, this
sys n can easily be modified for military applications.

DIGITAL INDICATORS

Using a serial BCD input signal, these indicators are designed to be used in conjunction with Air Transport Inertial Navigation System (INS) or Distance Measuring Equipment (DME) type equipment. All are fully compatible with the requirements of ARINC Specifications 561-2, 568 and those covering Air Transport Indicators.

In operation, each indicator recognizes the address of a specific function parameter, decodes the serial BCD data, and provides a digital display of the information. Important design advances in the areas of fault monitoring and detect circuitry plus central dimming capabilities are incorporated into the basic indicator design philosophy.

SEE SECTION 3500, page 1640 for a description of our wide line of Synchros, Servo Motors and Torquers.

SERIES 506, 506A
SYNCHRO COORDINATE CONVERTERS

Series 506 and 506A Synchro Coordinate Converters, through the use of coordinate transformation techniques, convert an X-Y recorder into a synchro recorder for plotting polar and rectangular beam patterns (signal levels vs. synchro shaft angle).

FEATURES:

- Synchro angle offset control
- No moving parts
- Front panel zero and calibrate controls
- Compatible with most 60 Hz synchros such as 15CX6, 23TX6 (400 Hz units also available)

APPLICATIONS:

- Antenna testing
- Range and bearing plotting
- Calibration of underwater and airborne acoustical devices
- Measurements of electromagnetic and acoustical fields

SPECIFICATIONS

Rectilinear Beam Plots (506A only)

Converts linear (V) vs. AC Synchro (θ) to linear V vs. Linear θ

DC Signal Input: Direct feed thru to recorder
AC Synchro Input: 115/90 v 60 Hz, 1X (36x usable for highest accuracy)
X Output: 0 to +4.5 vdc
Full Scales: 18° and 36° with 36X synchro; 90°, 180° and 360° with 1X synchro.
Acuracy: ±0.02° for 18° and 36° scales; 0.15° for 90° and 180° scales; ±0.3° for 360° scale.

Polar Beam Patterns (506 or 506A)

Converts linear (V) vs. AC Synchro (θ) to V sin θ vs. V cos θ

DC Signal Input*: 0 to +5 vdc
AC Synchro Input: 115/90 v 60 Hz, 1X
Y Output: ±(0 to 2.2 v) from origin of +1.4 v
X Output: ±(0 to 2.2 v) from origin of +2.2 v
Accuracy: ±1% fs Radius; ±1° in angle
AC Power Input: 115 v, 60-400 Hz, 0.1 amps rms approx.
Mechanical — Size: 3½" high x 17" deep x 19" wide for rack mounting
Weight: 18 pounds; shipping, 27 pounds

SERIES 505 DISPLAY COORDINATE CONVERTER

Series 505 Display Coordinate Converter is an interface device which provides coordinate transformation of inputs for plotting on X-Y recorders. It performs an integrated series of functions, selectable by a front panel mode switch. Depending on the recording mode chosen, the 505 selects the proper coordinate system, sets the gains, and injects the proper axes offsets in accordance with preset controls. In addition, the operator may select special conditions for his application, such as scale expansion of signal level or synchro angle, or axis offset of the signal input.

The Series 505 Display Coordinate Converter performs all of the functions of the Series 506 and 506A. In addition the 505 has provisions for plotting one function against the log of a second function (e.g.: output vs log frequency), as well as plotting x-y data.

APPLICATIONS:

- Complex plane or other X-Y plots, imaginary vs. real, or other DC vs. DC signals.
- Response
  Level, phase or immitance vs. frequency, log frequency or other functions
- Response Reference Comparison
  Provision for subtraction of curve follower output from input signal for recording deviation from precalibrated standard.

SPECIFICATIONS

Presents linear vs linear plotting with preset gain and offset

Converts linear vs. linear to: linear vs. linear, linear vs. one decade log, linear vs. two decade

Rectilinear Beam Plots (Same as for 506A)
Polar Beam Patterns (Same as for 506 & 506A)
Linear vs. log
DC Signal Input*: 0 to +5 vdc**
DC (Frequency) Input*: 0 to +10 vdc; +1 to +10 v for one decade log; +0.1 to +10 v for two decade log
Y Output: 0 to +2.5 vdc, adjustable
X Output: 0 to +5 vdc, adjustable
Accuracy: Linear ±0.1% fs; Log ±1% of reading. Calibrated offsets from −40 db to +20 db in steps of 10 db, and selection of 20, 50 and 100 db full scale on the Y axis when using dc logarithmic input signal (e.g. from Dranetz Model 220 Log Sampling Voltmeter).

Linear X-Y Plotting
DC Inputs*: Two - each ±5.0 vdc
X & Y Outputs: each 0 to +2.5 vdc, adjustable
Accuracy: ±0.1% fs
Suitable for use with Dranetz 202 or 202A Vector Component Computer
AC Power Input: 115 v, 60-400 Hz, 0.1 amps rms
Size: 3½" high x 17" deep x 19" wide for rack mounting
Weight: 18 pounds; shipping, 27 pounds

* Suggested levels — will accommodate ±25% gain and offset variation
** Additional input for subtraction of curve follower output. −5 vdc (relative) available for connection across curve follower potentiometer.

See Section 2900 for our pages on Test Instruments.

TING MODULES

Series CM Computing modules consists of the CM-1000 DC Log Amplifier; CM-1100 Phase Generator; CM-1200 Phase to DC Converter and CM-1300 Phase Sensitive Detector. All are packaged in low-profile, flat package for printed circuit mounting.

-40, CM-1000-60 DC LOG AMPLIFIERS

1000 Log Amplifier transforms DC signals to an output volt- rtional to the logarithm of the input voltage. With input to 10 volts (40 db range), the output error is less than from the specified equation $V_{out} = 5 + 5 \log V_{in}$ volts. From volts (60 db), the error is less than ±0.2 db. The unit is r an 80 db range at slightly reduced accuracy by the use of rimming. Internal temperature regulation provides tight con- e log characteristic over the specified temperature range. and offset are also externally programmable.

ES:

- nmable gain and offset
- roseconds response time
- 80 db dynamic range

TIONS:

- Conditioning
- nversion — db output
- Spectrum Analysis
- Useful for scaling DVM's

AND CM-1110 SYNCHRO TO PHASE CONVERTERS

odel CM-1100 converts the output of a 3-wire or 4-wire to variable phase square waves. This module, using an AC , produces three square wave outputs: a reference signal, a re signal (a signal shifted 90° from reference) and a signal y an angle equal to the shaft angle. The CM-1110 is similar -1100 except that it does not produce reference outputs and ed for systems where the reference is already available. ting of one side of a 4-wire synchro resolver is permissible, e Generator will operate from the 4-wire resolver through an network (see data sheet). When used with a 3-wire or torque transmitter, a Scott-T transformer must be em- Used with a CM-1200 or CM-1300 module, the phase gen- ll convert a synchro signal to a DC analog, or to sin and cos s for rectangular coordinates. Its new conversion method matched phase shift networks for variable and reference to assure an accurate output. Matched filters for the ref- nd variable channels makes the phase generator insensitive or distortion. High input and low output impedances e system loading effects.

RES

- and waveform filtering
- es with and w/o reference phase
- atible with CM-1200 and CM-1300

ATIONS:

- Conditioning
- to Rectangular Conversion
- Synchro to Analog Conversion
- Synchro to Digital Conversion

00 AND CM-1210 PHASE TO DC CONVERTERS

M-1200 series module converts an input of two square waves same frequency to a DC output proportional to the phase the signals. The Model CM-1200 produces full scale output °, 720°, to 1440°, selectable by means of external jumpers, luding provision for externally resetting the output to corre- o less than 360°. The CM-1210 produces a single full scale for 360°. When used with a CM-1100 module, the two combine ert a synchro output to a DC signal proportional to shaft angle. ut drive is compatible with CM-1100 or TTL logic levels.

RES

- rammable Ranges 360°, 720°, 1440°
- patible with CM-1100

ATIONS:

- al Conditioning
- hro to Digital Conversion
- Synchro to Analog Conversion

00 PHASE SENSITIVE DETECTOR

CM-1300 series Phase Sensitive Detector produces DC outputs onding to real and imaginary components of an AC signal, as inputs, three phase related square waves and a DC level. tputs from the CM-1300 are equivalent to E cos θ and E sin θ. al gain and offset adjustments for each output channel are at the factory. Provisions are made for external changes of settings. Internal filters provide maximum harmonic rejection.

URES

- patible with CM-1100
- ules available for 60 or 400 Hz operation
- Harmonic Rejection

ICATIONS:

- al Conditioning
- gation Plotting
- sducer Pattern Measurement
- Antenna Pattern Recording
- Polar to Rectangular Conversion

pplication information on any of the CM MODULES, request c bulletins.

FEATURES:

- Temperature stabilized
- Integrated circuit design
- Reverse voltage protection
- Printed circuit mounting
- 32-125°F operating temperature range
- Meet MIL-E-16400
- Input Power: ±15 Vdc ±2%

SPECIFICATIONS

Input Signal (DC): CM-1000-40 - +0.1 to +10 v
CM-1000-60 - +0.01 to +10 v
Input Impedance: 50 K ohms
Output Signal (DC): Single Ended (0.25 V/DB)
CM-1000-40 — 0 to +10 v and 0 to −10 v
CM-1000-60 — −5 to +10 v and +5 to −10 v
Push Pull: Center tapped at ground
CM-1000-40 — 0 to +20 v, or 0 to −20 v (0.5 v per db)
CM-1000-60 — −10 v to +20 v, or +10 v to −20 v (0.5 v per db)
Output Impedances: 75 ohms approx
Output Loads: 10 K ohms and higher
Accuracy: CM-1000-40 — ±.15 db referred to input
CM-1000-60 — +.2 db referred to input
Response time for 20 db step: 25 microseconds (slew rate of 200 v/ms)
Temperature Coefficient: <.006DB/°F
Package Size: 3″ x 2.5″ x 0.625″
Weight: 4 ounces

SPECIFICATIONS

Signal Input Levels (Simultaneous):
#1, 3 v ±10% AC (representing sine of shaft angle)
#2, 3 v ±10% AC (representing cosine of shaft angle)
#3, 3 v ±10% AC Reference (CM-1100 only)

Output:
#1, 20 v p-to-p square wave (phase variable with shaft angle)
#2, (CM-1100 only) 20 v p-to-p square wave locked in phase with reference signal
#3, (CM-1100 only)20 v p-to-p in quadrature with output #2

Accuracy: ±12 minutes of arc

Temperature Coefficient: ±0.01 minutes of arc per °F

Slew Rate: 1000°/second at 60 Hz — 7000°/second at 400 Hz

Frequency: CM-1100-60 and CM-1110-60, 60 Hz, ±5%
CM-1100-400 and CM-1110-400, 400 Hz, ±5%

Output Load: 2KΩ or higher (DC coupled)

Size & Weight: 3″ x 4.5″ x 0.625″; 7 oz.

SPECIFICATIONS

Input Signals: Reference & Variable Phase
A. Direct Coupled from CM-1100 or any phase related pair of square wave signals 15 v p-p to 25 v p-p
B. TTL logic levels (+4 and 0 v, 4 ma sinking logic)
Input Impedance: A. 2K; B. 4 ma sinking logic at 0 v.
DC Output Signal: +3.6 volts full scale (provisions for external adjustment of offset and gain)
Output Impedance: 50 ohms maximum
Range: CM-1200: 0 - 360°, 0 - 720°, or 0 - 1440° CM-1210: 0 - 360°
Temperature Coefficient: ±0.005% FS per °F
Frequency: CM-1200-60 and CM-1210-60: 60 Hz ±5%
CM-1200-400 and CM-1210-400: 400 Hz ±5%
Rise/Fall Time (10% - 90% points): CM-1200-60: 200 ms
CM-1200-400: 30 ms
Accuracy: ±12 minutes of arc per 360 degree cycle
Size and Weight: 3″ x 4.5″ x .625″ — 7 oz.

SPECIFICATIONS

Input: #1, 20 v p-to-p square wave variable phase
#2, 20 v p-to-p square wave reference phase
#3, 20 v p-to-p square wave in quadrature with #2
#4, 0 to +5 v dc

Output: E Cos θ, 0 to ±10 vdc; E Sin θ, 0 to ±10 vdc

Frequency: CM-1300-60: 60 Hz ±5%; CM-1300-400: 400 Hz ±5%

Accuracy (at 25°C): ±1 degree (angle); ±2% fs (Magnitude)

Temperature Coefficient: Magnitude: ±0.05% fs per °F

Size & Weight: 3″ x 4.5″ x 0.625″; 7 oz.

See Section 2900 for our pages on Test Instruments.

SERVO COMPONENTS

INSTRUMENTS, AMPLIFIERS and ACCESSORIES

FOR MILITARY AND INDUSTRIAL CONTROL SYSTEMS

SERVO AMPLIFIERS

- *DC, pot and synchro inputs*
- *60 and 400 ∿ outputs*
- *Hybrid 972A (.5 cu in, 9 watts) to Triac 893A (800 watts)*
- *160 different models*

SERVO TESTERS

- *100C, general purpose use*
- *103A, prod and field test*
- *Frequency and transient response*
- *For DC and AC servos*

SYNCHRO AMPLIFIERS

- *929R, 90V./line, 400 ∿ stators*
- *820A, 90V./line, 60 ∿ stators*
- *Buffer CX's from CT and TR loads*
- *High accuracy and fast response*

SERVO DEMONSTRATORS

- *Laboratory experiments*
- *Industrial training*
- *Synchro and pot data*
- *60 and 400 ∿ models*

SYNCHRO DIRECTORS

- *Generate 1 and 36 speed stator voltages*
- *Constant velocity and harmonic motion modes*
- *Computer programmed*
- *60 and 400 ∿ stator outputs.*

Write for Catalog of our COMPLETE Servo Line.

GAP
INSTRUMENT CORP.

COMPLETE SYSTEM CAPABILITY

☐ SOLID STATE ☐ ELECTRO-MECHANIC

SERVO

Pre-engineered Servo-Pax miniaturized modules which provide highly reliable, transistorized, high density servos for military and industrial systems.

ACTUATORS — A servo Rotary Actuator System for aircraft camera positioning that combines high torque and accuracy in its output. High density package with digital circuits capable of providing an increase in discrete output positions.

INDICATORS — A compact analog servo unit, providing a visual readout of electrical input data. A wide selection of these units is available to meet many variations of military and commercial specifications.

ANALOG

Generation of complete systems to meet a a plicable M16 specifications for • Navigati ASW • Fire Control • Missile Tracking • S • Computers • Simulators • Nuclear Co

RELATIVE VELOCITY COMPUTER TEST SET — A ground support equipment for testing a variety of inertial alignment computer systems with capability of complete self-test. A hybrid system employing analog and digital electro-mechanical and solid state circuitry.

OWN SHIPS MOTION SIMULATOR A shipboard navigation and fire control training equipment using electro-mechanical computing techniques capable of simulating all surface maneuvers of ships of the fleet.

DIGITAL Converters

A to D . . . D to A To meet your interface requirements, GAP has a complet of prototype converters which can be custom-designed for your individual applic Available as both solid state and electro-mechanical units, they feature multi- multi-channel operation with a variety of visual displays available. Two of the are the Model S3289 and Model S3290.

DIGITAL CONTROL TRANSFORMER MODEL S3290
Containing 4 independent and multiplexed channels with data storage, each channel performs the exact function of an 11CT4 synchro with the mechanical shaft angular position replaced by a 13 bit binary word. By retaining the 3 wire stator angle input and providing a difference angle output voltage, all electrical parameters of the 11CT4 synchro have been maintained to permit direct replacements of 11CT4 synchros for direct digital control of servo systems, where a control transmitter (11CX4 or equivalent) is the driven element. Units are available with different channel specifications to meet military and commercial requirements.

48 CHANNEL SYNCHRO/ DIGITAL CONVERTER SOLID STATE/MODEL S3289
Model S3289 is a high speed all solid state synchro to digital converter using medium scale integrated circuits and precision etched resistors. A 48 channel multiplexer switches any one of the input channels in synchro to digital converter where a ratio mea ment is made between Sine θ and Cosine θ to ob as a 12 bit parallel binary output. All signal and ence inputs are transformer isolated.

The S3280 series of converters can accommoda to 64 synchro or revolver input channels. The ser designed using a modular-function concept which mits a wide variety of customer modifications easily incorporated.

GAP INSTRUMENT CORP. is a designer/producer of precis electro-mechanical components, servo/digital/analog systems a remote-positioning devices for control, computation, display a simulation.

MAG TECH DC TORQUE MOTORS, TACH GENERATORS

Direct Drive

Magnetic Technology DC torque motors are designed to produce high torque at low speeds, making them ideal for direct coupling to the driven load. Elimination of gearing and associated backlash results in maximum servo coupling stiffness, increased torque to inertia ratio at the load shaft and precise positioning resolution.

Fast Response

High flux density in the magnetic circuit results in low armature inductance and low electrical time constant.

Permanent Magnet Field

Maximum torque with minimum input power and weight results from the PM field. It also enables motors to be maintained under standby conditions without dissipation of power or generation of heat.

Specifications for typical models

PMC SERVO MECHANISMS & COMPONENTS

PREDESIGNED MECHANISMS

A complete line of off-the-shelf components for assembling an unlimited variety of geared mechanisms. Gear ratios to 78,125:1, zero-backlash spring-loaded gears and torque-limiting slip clutches are featured. Assembled units meet design and materials requirements of MIL-E-5400 and MIL-E-16400.

For complete data and catalog of stocked components, request Bulletin 102.

CUSTOM DESIGNS

PMC specializes in design and manufacture servo mechanisms and mechanical modules to user requirements for airborne, ground support, communications, fire control and other critical applications. The units shown below are typical of the mechanisms designed and manufactured for military and industrial equipments.

Short lead time delivery on both prototypes and production quantities.

ADJUSTABLE LIMIT SWITCHES & STOPS

0-10, -20, -40 revolutions without snap action switch, 0-25 revolutions with snap action switches actuated just before mechanical stops. All models infinitely adjustable with single external screw. SPDT snap action switch rated 7A, 250V.

Limit Stop
Series LS 100
5/8 and 7/8" dia.

Limit Stop And Switch
Series LS 300
15/16" dia.

For complete data, request Bulletins 103 and 104

CAM SWITCHES

Adjustable-In-Motion

PMC's patented cam switch design incorporates in a single component all the functions of a conventional plate cam, cam follower and snap-action switch, eliminating the need for separately-mounted cam mechanisms and switches and their associated hardware. Externally-adjustable dwell angles can be set to any position with respect to the shaft. All models available as single- or multi-switch types, with ganged switches independently adjustable.

Model CS 402 Miniature Cam Switches

Miniature units designed and manufactured to military and aerospace specifications.

Diameter: 1-1/16", equivalent to to BuOrd Size 11
Length: 0.8", one switch, plus 5" per switch
Dwell Angle: 3° to 357°
Switch: SPDT
Rating: 5A, 250VAC, 30VDC
Multi-Switch Models: up to 10 switches
Shaft: 0.125" dia.

For complete data, request Bulletin 106

Model CS 601 Subminiature Cam Switches

Subminiature units for airborne, space vehicle and other applications where size and weight are critical.

Diameter: 0.75", equivalent to BuOrd Size 8
Length: 0.730" one switch, plus 0.437" per switch
Dwell Angle: 3° to 357°
Switch: SPDT
Rating: 7A, 250VAC, 30VDC
Shaft: 0.125" dia.
Multi-Switch Models: up to 8 switches

For complete data, request Bulletin 09

Model CS 501 High-Power Cam Switches

Industrial types for control, cycling and sequencing of machine operations. End- or side-mounting, with or without switch covers. Dials permit visual adjustment of switching points and dwell angles.

Dwell Angle: 5° to 355
Diameter: 3.5"
Length: 3" one switch, plus 1.5" per switch
Shaft: 0.5" dia.
Switches: SPDT, DPDT. Special types to requirements
Ratings: to 25A and 60 V inrush current to 75A.

For complete data, request Bulletin 08

Servo Development Corp.

SYSTEMS

ELECTROMECHANICAL • SOLID STATE
COUNTERS • SERVOMECHANISMS
AIRCRAFT INSTRUMENTS • TIMERS

SERVO & ELECTROMECHANICAL DEVICES

Devices include display and positioning servos with output shaft torques up to 200 oz-inches, signal conversion servos providing electrical outputs with stringent static and dynamic requirements for use in special purpose airborne analog computers. These systems have been produced using DC torquers, stepper motors and AC servo motors.

TIMERS & INTERVALOMETERS

This line of sophisticated digital, solid state and electromechanical timers, intervalometers, programmers and clocks are used for navigational aids, fire control and weapon release systems. Outputs vary from switch closures to complex pulse trains. Timing cycles from milliseconds through hours with accuracies better than .005% are available. Manual or remote programming can be provided.

DIGITAL DEVICES

Solid state pulse generators, comparators and programmers are custom designed to commercial and military specs. These devices can accept analog, digital or pulse signals and process these depending upon application. Pulse outputs are available to the multi-ampere range with rise and fall times down to the nanosecond region.

AIRCRAFT INSTRUMENTS

SDC produces a line of air data, temperature and engine instruments for both military aircraft and commercial jet transports. The air data indicators are designed to operate from Air Data Computer outputs and temperature instruments from resistance probes. These indicators are supplied with DC Torquer drives as well as conventional AC servo motors.

COUNTERS MECHANICAL & ELECTROMECHANICAL

SDC offers a catalog line of low torque, high-speed mechanical instrument counters. These counters are used in our Microjuster® series, which is an accurate manual input device that generates electrical signals proportional to a digital counter display. These signals can be synchro or analog output.

Automatic and manual resettable pulse counters are available.

VERNITRON TORQSYN® REMOTE POSITIONERS

The complete gearless servo system in one small package

The Torqsyn Remote Positioner is an integrated system that combines a synchro transformer, torque motor, amplifier, stabilization network in a single package. The Torqsyn thus can simplify design, procurement, assembly and maintenance and improve reliability. Size 23 and size 16 and housings are available. Torqsyn converts input synchro data into accurate shaft position. High input impedance allows it to be driven by low power signal sources.

The Torqsyn Remote Positioner may be used to drive potentiometers, encoders, resolvers, indicators, etc. In several models, either 60 Hz or 400 Hz signals may be accepted.

Complete subsystems and assemblies incorporating Torqsyn units

Synchro Signal Amplifiers

- ☐ Accepts synchro signal from any transmitter
- ☐ High impedance input
- ☐ Drives large synchro transmitter
- ☐ Frequency change possible from driving to driven transmitter
- ☐ Can drive multiple receivers
- ☐ Single or multiple channels

Indicator Packages

- ☐ High impedance input
- ☐ High accuracy (10 minutes)
- ☐ No current feedback to source
- ☐ May be driven by low power source such as digital to synchro outputs

Typical Torqsyn Performance Characteristics @ 25°C

ERNITRON YNCHROS AND ESOLVERS

ndard Synchros

- ne sizes 8 thru 45
- est Mil-Spec designs (modifications as you require)
- uracies down to 3 minutes
- gle and double ended shafts
- nless steel or aluminum housings
- minal block or lead types
- shless units
- dem units
- nsmitters, receivers, differentials, receiver/ nsmitters, linear synchros (induction pots)

ndard Resolvers

- Weps frame sizes 8, 11, 15 and 23
- uracies to .05% on computing types and 20 seconds
- data transmission units
- est Mil-Spec designs (modifications as you require)
- ying voltage, frequency and impedance levels
- mmed and Tuned Resolvers
- ase shifters
- eep resolvers
- mperature compensated units
- ushless resolvers
- solver chains (booster and boosterless)

Pancake Synchros and Resolvers

- ☐ Single speed — Accuracies to 10 seconds, Sizes 1.2″ to 13.4″ O.D.
- ☐ Multi-speed — Accuracies to 3 seconds, Sizes 1.5″ to 13.4″ O.D., Speeds — 2X to 72X
- ☐ Dual, triple combinations of speeds, in wide range of sizes and speeds. Also available with brushless torque motors
- ☐ True brushless or flex lead designs, single or multi-speeds
- ☐ Cartridge assemblies in stainless steel, aluminum, beryllium or titanium to meet unique requirements
- ☐ Temperatures from −65°F to +500°F. Space applications — hard vacuum — 10^{-14}Torr

rtia Motor Standard Series
JKMM-25EM

(B). Minertia Motor Junior Series
JKCM-150EM

Minertia Motor®

HIGH PERFORMANCE D-C SERVOMOTOR

"Slotless Armature"

CHARACTERISTICS:

1. Low armature inertia
2. High maximum torque
3. High torque to inertia ratio
4. High power rate
5. Short Mech. time constant
6. Short Elect. time constant
7. Smooth operation in wide speed range
8. Superior commutation performance
9. Superior linearity of torque vs. speed performance

APPLICATIONS:

1. Machine Tools
   - N/C servo drive in milling machines, Lathes and drilling machines
   - Tracer system in milling machines, Lathes and drilling machines
2. General industrial machines
   - Radar and antenna drives
   - Edge position control for steel mill and textile
   - Electrode positioners
3. Computer peripheral equipment
   - Magnetic tape transports capstan drive
   - Line printer paper feed
   - Card sorters

Jan. 29, 1970

cteristics & Ratings of *Minertia Motor*

MM Minertia Motor Standard Series — Mech. time constant s about 3 to 4 millisecond.

CM Minertia Motor Junior Series — Moderate performance for general servo application.

SM Minertia Motor Super Series — Mech. time constant is around one millisecond.

AIRPAX

CIRCUIT PROTECTORS & GLASS-TO-METAL SEALS

TYPE APG CIRCUIT PROTECTORS

Airpax APG type protectors provide reliable, low cost circuit protection for industrial applications and ground support military equipment. Combining the mechanism of the military approved Airpax AP protector with the delay system and coil structure of the larger APL type, these devices have all of the plus features which characterize Airpax circuit protectors. Toggle action is trip free, making it impossible to hold the circuit closed against a fault.

The APG line offers series, shunt and relay configurations with a choice of delays and ratings. Delay is magnetic-hydraulic by using an iron slug that moves in an oil-filled cylinder. Ratings are from 20 milliamperes to 30 amperes, 250 volts maximum at 60 or 400 Hz and 50 volts DC maximum. A SPDT auxiliary switch, for remote signaling or alarm, rated at 5 amperes up to 30 volts DC and 10 amperes, 250 VAC maximum, can be supplied with series trip types.

APG two and three pole assemblies have single toggle handles, a unique feature which simplifies mounting. These assemblies can be furnished with a mix of ratings, delays and internal circuit configurations, providing maximum versatility.

UPG types have UL listings as recognized components.

TYPE APL CIRCUIT PROTECTORS

Ruggedly constructed to provide dependable protection under the most severe conditions of use, the Airpax type APL circuit protector has its actuating mechanism housed in a molded phenolic case.

The handle opens and closes a circuit, under normal load conditions, similar to an ON-OFF switch. On overload the internal mechanism trips and forcibly returns the handle to the OFF position. The internal contacts will not remain closed in the presence of an overload, even though the handle is held in the ON position since the protector is "trip free."

Variants of the APL type are the UPL and MPL. Both are available with extended delay times to accommodate high inrush or motor starting currents without tripping. They are listed by the Underwriters' Laboratories as recognized components.

APL protectors have full load current ratings from .050 to 50 amperes. They operate up to 50 VDC or 250 VAC maximum, 60 or 400 Hz. The trip current rating is unchanged over the rated operating temperature span.

The hydraulic dash-pot, included in the trip mechanism, provides a wide choice of delays to meet various circuit requirements. An inertia trip type is also available for delaying the protector armature movement on short time transients.

GLASS-TO-METAL SEALS AND PREFORMS

Exacting customer specifications are met with quality, glass insulated terminals manufactured by Airpax. A wide variety of terminals are producible and glass can be color coded for identification. Leads can be kovar, sleeved solid copper or tubular. A large choice of standardized pins, lugs, and in-house manufactured preforms permits quick delivery to your specific needs. All glass preforms and ceramic filled glasses are available to seal-manufacturing companies. Our engineering department will assure a seal to meet your requirement with a detailed analysis of your seal problem.

Catalogs are available on circuit protectors and glass seals. Please contact Airpax Electronics, Cambridge Division, Cambridge, Maryland 21613. Phone: (301) 228-4600. Telex: 8-7715. TWX: (710) 865-9655.

ALCOSWITCH®

DIV. OF ALCO ELECTRONIC PRODUCTS, INC.

MST SERIES MINIATURE TOGGLE SWITCHES

he original Alcoswitch Series of high quality ultra-miniature ggle switches combines high current capacity and long life in ½" case. Slim, bat handle or optional plastic caps(*) are proded. Terminals and contacts are solid silver. Case material is ack phenolic resin; 1/4-40 threaded bushing. Rated 5 amps at 5 VAC. SPDT and DPDT types have life cycle of over 80,000 n-off operations. High voltage barriers between terminals and ontacts. Rated 5 amps @ 115 VAC.

MSTA SERIES MINIATURE TOGGLE SWITCHES

This new Alcoswitch "MSTA" Series fills a need for those who want the best product possible at an optimum price. Similar in appearance and specs to the Alco "E" Series but without the waterproof feature. Has the important features wanted in a good miniature: turret terminals, extra-wide contacts, heavier current capabilities, low-loss, high heat and high impact case construction. "No Tear" shoulder on bushing. 6A 125V/3A 280 VAC.

MSTE SERIES MINIATURE TOGGLE SWITCHES

E SERIES

The new "E" Series has the most-wanted features in miniature switches. Waterproof 'O' rings are located inside the toggle and on the shoulder. A mechanical shoulder on the bottom of the bushing prevents "tear-offs" when a single mounting nut is employed. High voltage barriers between terminals inside as well as outside. Case has a new, superior plastic material capable of withstanding a higher impact; guards against accidental damage. Low-loss case has extremely high resistance between terminals and case ground, and its high temperature coefficient is ideally suited for prolonged soldering and printed circuits. Turret type terminals are used for simplified wiring or for P.C. Extra-wide, solid silver contacts are bonded, not riveted, on copper-silver plated terminals. Long-life cycle over 100,000 On-Off operations at operating conditions (SPDT). Rated 6 amps @ 125 VAC.

MSTG SERIES MINIATURE TOGGLE SWITCHES

Mustang

The Mustang Series is for designers who prefer the feel of a larger toggle switch but have space limitations behind today's compact panel. The familiar ultra-miniature Alcoswitch ½" case is utilized, however the Mustang mounting requirements are the same as the larger switches with 15/32" bushings. This new Alcoswitch concept is a behind-the-panel space-saver in all Mustang models and it is especially true in the 3 Pole and 4 Pole Series where non-miniature switches are bulky in size. The Mustang switches have the most-wanted features as itemized in the "E" Series story (at left) with the exception of the waterproof 'O' rings. The case construction is of low-loss, high impact and high temperature materials with turret terminals and silver contacts. 6 amps @ 125 VAC.

MINIATURE CYLINDRICAL TOGGLE SWITCHES

New design cylindrical case for miniature toggle switches when a positive feel and reliability are prerequisite in the smallest size possible. All metal construction and high impact terminal insulator allows use under all environmental conditions. Rated 10 amps @ 125 VAC. Internal contact resistance; under 20 milliohms @ 2-4 VDC, 1 amp. Life 40,000 on-off operations. Contact material, silver on copper. U/L Approval available on special order.

ILLUMINATED PUSH BUTTON SWITCHES

MSPN-206 DPDT

MSPN Illuminated Push Button Switches are snap-action types capable of handling a high current rating for its small size. DPDT action in a miniature case with separate connections to its replaceable T-1¾ grooved base lamps. Side terminals for simplified wiring or P.C. use. Metal construction, phenolic case, solid silver contacts. 6 amps @ 125 VAC. Mounts in 15/32" dia. hole. Wide choice of plastic buttons. **TRANSPARENT** colors: Red, Amber, Blue, Green, Clear. **TRANSLUCENT:** Red, Yellow, Green, White. Uses grooved base lamps.

KEYBOARD MAGNETIC REPULSION PUSH BUTTON SWITCHES

Momentary push button switches designed for data entry in modern electronic equipment. Ceramic magnets eliminate springs and allow for a very unusual touch that is light and snappy with little change in pressure over very long periods of service. Contacts are glass-encapsulated reeds for long-life. Plunger is keyed and non-rotating. Metal case withstands abuse and serves as a shield. Rated 100 mA @ 50 VDC, resistance 100 milliohms. Contact bounce 1 millisecond. Plunger travel 5/64". Operating force, under 2 ozs. Life, 10 million.

MINIATURE ROTARY SWITCHES

MRA Adjustable-Stop Rotary Switches are miniature types rat 500 mA @ 125 VAC. Features: adjustable-stop; non-shorting; 3 spacing; up to 4 poles on single deck; solid silver termin and contacts. Types with suffix **S,** ⅛", dia. shaft less kno Bushing, ¼-40.

MRA 12-Position Rotary Switches are slightly larger than sta dard MRA Series has ⅛" shaft and 30° spacing. Other spe similar to MRA Series. Knobs not included. Type MRA-1-12S c be converted to an adjustable-stop switch when used wi KCVS-500 knob (see Alco knob listings).

MSRE Waterproof Rotary Switches are non-adjustable. Simil to MRA Series but feature internal and external 'O' rings. Or piece metal case construction, and terminals are epoxy seale ⅛" shaft. Ideal for printed circuits. Supplied less knob. Rat 500 mA @ 125 VAC. Can be converted to an adjustable-st switch when used with KCVS-500 knob (see knob listings).

MINIATURE PUSH BUTTON MOTOR START SWITCHES

Alco Miniature Power Switches combine a compact size, modern appearance and functional flexibility to meet today's control needs and mount in a 1" hole. Rated to carry to carry 6 amps @ 230 VAC. These switches may be used to control circuits independently or with optional relays. All models supplied with a single (N.O.-N.C.) contact block but have provisions for additional (SU) blocks thereby converting to DPDT, 3PDT, 4PDT.

3-Way Selector Power Switch is the same basic model as above but instead has a bar knob with pointer. Electrical and physical specifications are the same. Available in black only.

Key-Lock Push Button type is an accident-proof power switch that has its own key lock to prevent unwanted operations of machines and controls. The switch functions only when the key disengages the lock. Same specs as the series described above.

*Push button models are equipped with spare (snap-on) colored buttons offering a choice of use in red, black, or green.

LOCKING — MODULAR SECTIONS

This series is similar in appearance and specifications to the SB series described to the right. This group differs because a bar is installed that provides a single locking operation. Overall length varies depending on the number of switches involved, each spaced 0.700" apart. Same SBB type keys are used (not supplied) and may be ordered separately. Note, removal of locking bar converts this switch into a momentary model.

Model	Number Positions	Description	One-24	25-99	100-499

SBL-12	12	Locking	24.70	19.76	—

Above switches are supplied less keys; order from listing at right.

REED SWITCH OPERATED KEYBOARD BANKS

Now designers can be assured of highest reliability in data processing equipment. Short strokes provide a smooth operation of the switch plunger resulting in one of the finest keyboard actions obtainable. It is also suitable for test equipment, communication gear, and many other applications. All details of this switch line are designed for light pressure (5 ounces), operator's convenience, and positive input of data with long life under heavy office type of usage. Highly efficient "single-pole open circuit' reed switches are used assuring reliability and extremely long life expectancy. Square light grey keys (19/32") have an industry standard 0-9 marking and format. All switch positions contain a "positive lockout" between sections and rows. This feature prevents more than one position from operating at the same time. This basic keyboard system is designed for flexibility and can be customized to meet the special needs of quantity users. Up to 12 switches may be installed in the basic module in any combination including momentary, or lockout design.

MOMENTARY MODULAR SECTIONS

This modular idea is a simple concept, which allows the design engineer to create his own custom push button layouts. Highly efficient single pole "normally-open" reed switches aer used throughout thus assuring reliability and an extremely long life expectancy. Light pressure (5 ounces) and short strokes result in optimum operators' convenience and positive input of data. The basic module allows use of one to three switches in either momentary or alternate "push-ON-push-OFF" action. Stacking allows any number of these switch sections to be used in a group by themselves or with our matching keyboard assemblies SB-032, SB-033, SB-034, SB-035. Standard size switch Keys are available separately in various colors, either single or extended Keys which span 2 or 3 switches. Note: that by use of wider keys it is also possible to form 2 or 3 pole switch functions.

INDEPENDENT LOCKING — MODULAR SECTIONS

New series of inline keyboard switch modules are similar to the SB Series described above except these switches have alternate action, independent of each other. When one switch is depressed, it remains that way regardless of the switching action of the rest of the module. Same SBB type keys are used.

MULTIPLE SWITCHES T 596

FEATURES:

- Illuminated or non-illuminated
- Up to 6 PDT contacts per station
- All contacts are inside of switch
- Self-cleaning slide action contacts
- From 2 to 11 stations in one frame
- Easy front or back panel mounting
- PC or solder lug terminals
- Square buttons can be mounted in tight parallel rows to form a

SERIES T-596 MULTIPLE SWITCHES

For front panel, chassis, or PC board mounting using 4-40 screws. Up to 6 PDT silver-nickel self-cleaning slide-action contacts. Occupies less than one square inch of panel space. Only 1½" depth behind panel. Long-life special nylon parts used throughout. Pushbutton switches can be furnished with round ⅜" diameter or square ⅞" x 13/16" with 0.827" center-to-center spacing, in white, black, red, yellow, green, or blue buttons. Square buttons may be engraved or hot stamped. Illuminated pushbutton switches are available using lamps, which are accessible from front. Special unbased lamps in 6, 12, 24 v 1 watt are available all over the world. Prices per station approximately $2.50 for non-illuminated; $4.50 for illuminated (1-9 pcs).

SPECIFICATIONS

Contact Rating: 1 amp at 30 vdc or 0.2 amp at 11
Contact Arrangement: Two, four, and six form C conta
Life Expectancy: 10^5 mechanical; 5 x 10^4 at rated loa
Ambient Temperature Range: −20°C to +60°C.
Dielectric Strength: Under room conditions, 500v rms.
Insulation Resistance: Under room conditions, 10^9 ohr
Terminals: Solder lugs or PC terminals.

SWITCHING SYSTEMS

ANNRS AND MULTIPLEXERS

re a rge number of analog signals are to be measured they be nned or multiplexed into one common output device, h as igital Voltmeter. A.D.D.S. supply a complete range of s, ding switches for low level signals, such as thermo- ples, wire strain gain, bridge measurements, high frequency coaxial switching, guarded switching and many others from stock and will build to special requirements.

The units are designed with a unique modular construction enabling the basic unit to be expanded in groups of 10 channels by an extensive selection of switching modules.

ANER CONTROLS

el 1 — 100 Channel Control to accept 100 switches of 1, 2, 3 or 4 poles in modules of 10 channels.

el 1 — 1000 Channel Control to accept 1000 switches of 1, 2, 3 or 4 poles in modules of 10 channels.

el 5 — 1000 Channel Control to accept 1000 single pole switches in compact modules of 50 channels.

el 15 — Duo Control to accept 50 channels of analog switches and 50 channels of programming by plug-in pin boards.

el 2 — 1024 Channel Binary Control to accept 1024 switches of 1, 2, 3 or 4 poles in modules of 8 channels.

PASION MODULE CHASSIS

se its are rack mounted and wired to accept standard modules ex ding the basic control unit.

el 52 — Front panel mounted with connectors in rear to accept 10 modules each of 10 channels.

el 34 — Rear panel mounted with connectors in rear to accept 10 modules each of 10 channels.

el 83 — Front panel mounted with connectors in rear to accept 16 modules each of 8 channels for use with binary control unit.

L) STATE SWITCH MODULES

le 00 — 10 Channel FET solid state module for 10 Kc switching rate.

SCANNER MODULES

Model 605 — 10 Channel Single wire reed switching.

Model 485 — 10 Channel two wire reed switching.

Model 483 — 10 Channel three wire reed switching

Model 484 — 10 Channel four wire reed switching.

Model 476 — 10 Channel two wire plus guard switching. 120 dvb common mode rejection and less than 1 microvolt noise for low level signals.

Model 518 — Same as Model 476 plus control wire for programming.

Model 624 — 10 Channel, 2 wire, plus guard with flying capacitor filtering.

Model 559 — 50 Channel single wire reed switching.

The above modules are also available with mercury wetted reed relays.

SCANNER/A.D. CONVERTER COMBINATIONS

Model 022 — This combination of Scanner and A/D Converter has capacity for 10 channels of switching using reed relays up to 500 samples/second or solid state multiplexing up to 10 Kc. The A/D Converter has 3 digit plus sign resolution at 10 Kc.

Model 032 — This has the features of the Model 022 but the A/D Converter has 4 digit plus sign resolution at 10 Kc.

REED RELAY MATRICES

REED RELAY MATRICES

For switching multiple path signals, using reed relays for signal switching and TTL compatible logic for controls.

Each path can be selected in nanoseconds from X, Y and select pulses which latch the control logic and the reed relay switch.

The switched path simulates a 50 ohm impedance coaxial line, terminated in 50 ohm connectors to give minimum signal distortion and crosstalk at frequencies exceeding 10 MHz.

Options include electrical readout of crosspoint selected.

TYPICAL APPLICATIONS

Controlled switching in automatic testing of integrated circuits, printed circuit modules, logic modules.

Routing of R.F. signals, telemetry signals.
Programming video signals.
Computer interface to automatic equipment.

Model 056-003 — 10 x 10 x 1 Matrix with Coax signal connectors.

Model 056-103 — 10 x 10 x 1 Matrix with Coax signal connectors and electrical readout of crosspoint selected.

Model 056-006 — 10 x 10 x 2 Matrix.

Model 056-106 — 10 x 10 x 2 Matrix with crosspoint readout.

Model 056-009 — 10 x 10 x 3 Matrix.

Model 056-109 — 10 x 10 x 3 Matrix with crosspoint readout.

RF SWITCHES

AMPHENOL
THE BUNKER-RAMO CORPORATION

Series 303 High Isolation Microwave Switches

Compact coaxial switches, with superior isolation characteristics over entire operating range, particularly suitable where crosstalk interference must be minimized. Other units are also available, please request additional information and specifications.

CHARACTERISTICS

ELECTRICAL: Frequency Range: standard size and economy 0-12.4 GHz, miniature (303-10179-00) 0-18 GHz. **Characteristic Impedance:** 50 ohms. **Crosstalk (isolation):** 60 db at 12.4 GHz (standard) and at 18 GHz (miniature). **SWR:** 1.5:1 at 12.4 and 18 GHz respectively. **Insertion loss:** 0.5 db maximum. **Contact resistance:** 60.0 milliohms. **RF Power rating:** 100 watts at 1 GHz (power off during switching). **High RF Voltage rating:** 1000 V peak at 60 Hz. **Switching time:** operate 15 ms maximum: release: 10 ms maximum.

MECHANICAL: Minimum life: 1,000,000 cycles.

ENVIRONMENTAL: Temperature range: —55°C to 55°C. **Moisture resistance:** 10 day cycle. **Shock:** operating: 10 g's; non-operating: 100 g's. **Vibration:** operating: Test Cond. B, 10 to 55 cps; non-operating: 20 g's, 10 to 2000 cps. **Altitude and cold:** 0 to 70,000 ft.

Coaxial Relays

Precision coax units. Maximum time to operate and release is 20 milliseconds. Gold-plated, fine silver contacts assure reliable low-level operation. Minimum life expectancy is 1,000,000 cycles, when switch is operated at speeds of less than 10 Hz. Switches are impedance matched to 50-ohm cable, though loss is negligible with 75-ohm cable. Operation is break-before-make. All materials are corrosion resistant.

Units meet applicable portions of military connector specifications as follows: BNC — Mil-C-3608 and N — Mil-C-71.

E TRANSFER

BUSS AGX FAST ACTING FUSES
¼ x 1 inch, glass tube, "quick-acting" type, 1/500 to 2 amp.

BUSS AGC AND MTH GLASS TUBE FUSES
¼ x 1¼ inch. AGC: 2½, 3 amps. MTH: 4, 5 or 6 amp.

BUSS AGC GLASS TUBE FUSES
¼ x 1¼ inch. 4 to 30 amp.

BUSS INDICATING FUSES
¼ x 1¼ inch, ¾ to 30 amp., and 1³⁄₃₂ x 1½ inch, 1/10 to 30 amp. Silverplated pin pops out when fuse is blown and provides quick, positive identification of faulted circuit . . . by visual signal, by activating an alarm, or both.

FUSETRON MDL DUAL-ELEMENT FUSES
¼ x 1¼ inch, glass tube "slow-blowing" 1/100 to 30 amp.

BUSS ABC CERAMIC TUBE FUSES
¼ x 1¼ inch, ¼ to 30 amp. For circuits having fault current capacity up to 25,000 amp. at 125 volts or 10,000 amps. at 250 volts

BUSS GJV PIGTAIL FUSES
¼ x 1½ inch, glass tube, with 1¼ inch leads of No. 20 tinned wire. ¹⁄₁₆ to 6 amp.

BUSS SFE STANDARD FUSES
⅝ to 1⁷⁄₁₆ inches in length, glass tube, 4 to 30 amp. Fuses of different amperages are of different lengths—to make it impossible to insert too large a size.

FUSETRON FNM FIBRE TUBE FUSES
1³⁄₃₂ x 1½ inch, dual-element "slow-blowing" 1/10 to 30 amp.

FUSETRON FNA SIGNAL OR VISUAL INDICATING FUSES
1/10 to 10 amp. Silver-plated pin pops out when fuse is blown and provides quick, positive identification of faulted circuit . . . by visual signal, by activating an alarm, or both.

BUSS SUB-MINIATURE GMW FUSE AND HWA FUSEHOLDER
Fuse size only .270 x .250 inches. Fuse has window for visual inspection of element. Fuse may be used with or without holder. 1/200 to 5 amps. Fuses and holders available to meet military specifications.

GFA TRON SUB-MINIATURE PIGTAIL FUSES
Body size only .145 x .300 inches. Glass tube construction permits visual inspection of element. Hermetically sealed. Twenty-three ampere sizes from 1/100 thru 15 amps.

BUSS GMT FUSES—HLT FUSEHOLDERS
Signal Indicating, Alarm Activating. For multiple circuit apparatus where space is at a premium. Holders take panel mounting space of only ¼ inch horizontal by 1¹⁵⁄₃₂ inches vertical. 18/100 to 10 amp.

BUSS HIGH VOLTAGE FUSES
For protection of circuits up to 20 KW on d.c. and 30KVA on a.c. 1/16 to 2 amp.

BUSS QUALITY
SMALL DIMENSION
FUSES and FUSEHOLDERS

FOR THE PROTECTION OF ALL TYPES OF ELECTRONIC & ELECTRICAL CIRCUITS & DEVICES

The complete BUSS line of fuses includes dual-element "slow-blowing," single-element "quick-acting" and signal or visual indicating types . . . in sizes from 1/500 amp. up—plus a companion line of fuse clips, blocks and holders.

Only a representative listing is shown here of the thousands of different types and sizes of fuses and holders available from BUSS.

All standard items are easily obtained through your BUSS distributor—but if you don't find what you want, get in touch with us.

When special fuses, fuse clips, fuse blocks or fuseholders are required, our staff of fuse engineers is at your service to help in selecting or designing the fuse or fuse mounting best suited to your requirements.

For detailed information on the complete BUSS line write for BUSS bulletin SFB.

BUSSMANN MFG. DIVISION, *McGraw-Edison Co.,* **St. Louis, Mo. 63107**

For fuses and fuseholders of unquestioned high quality

FUS RON TYPE N FUS AND FUS OLDERS

¼ x inch, 0 to 1¼ amps. and ⅛ x ⅛ inch, 1-3/10 to 7 amp. Glass be, "slow-blowing". Especi suitable for protection of T ars on fuses mat lots in holder to sa uard against use wrong size type fuse

BU IN-THE-LINE FU HOLDERS

For inch fuses, ¼ ¼ inches long.

BS IN-THE-LINE PL EL MOUNTED FE & HOLDER CO BINATIONS

H older makes it si e to protect w variety of de es or equipment, in ing fluorescent fu es. Should fu open, entire fu knob a bly is re ed.

SS PANEL MOUNTED SEHOLDERS

Indicating Series HJ, and HCM. For ¼ x 1, 1¼ and 9/32 x inch fuses.

SS PANEL OUNTED SEHOLDERS. RIES HPC

13/32 x 1⅜ and x 1½ inch fuses. o available in tary type.

BUSS PANEL MOUNTED FUSEHOLDERS

Lamp Indicating Series HK and HJ. For ¼ x 1 and ¼ x 1¼ inch fuses.

BUSS SPACE SAVER PANEL MOUNTED FUSEHOLDERS

Fuseholder only 1⅝ inches long . . . extends just 29/32 inch behind front of panel. Takes ¼ x 1¼ inch fuses. Holder rated at 15 ampere for any voltage up to 250.

BUSS SHIELDED PANEL MOUNTED FUSEHOLDERS

Prevent radio frequency interference. Available to take two size fuses ¼ x 1¼ inch and ¼ x 1 inch fuses. Meet performance specs of both MIL-I-6181D and MIL-F-19207B.

BUSS PANEL MOUNTED FUSEHOLDERS. VISUAL INDICATING SERIES HLD.

For ¼ x 1¼ inch BUSS GBA fuses (or GLD fuses) ¾ to 5 amps. Transparent knob permits visual indicating pin on open fuse to be seen.

BLOCKS FOR BUSS FUSES

All types available for every application. Single pole, multiple pole, small base, full base, molded base, laminated base, porcelain base for fuses from ¼ x ⅝ inches up. Also signal fuse blocks and special blocks of all types.

BUSS AIRCRAFT FUSES

Mechanical Indicating —Limiter type. Meet rigorous requirement of high speed, high performance aircraft. 1 to 60 amp.

FUSETRON ACK STUD MOUNTED FUSES

1 to 300 amp., dual-element type.

LIMITRON KTK HIGH INTERRUPTING CAPACITY FUSES

1 3/32 x 1½ inch, 1/10 to 30 amp. For circuits having fault current capacity up to 100,000 amps. AC only.

TRON RETCIFIER FUSES. For protection of Semi-Conductor Rectifiers and like applications.

Provide extremely fast opening on overload and fault currents, with a high degree of restriction of let-thru current. Many types and sizes available. Ampere ratings from 0 to 600.

C&K Subminiature Switches

C&K Components manufactures the most complete line of subminiature switches in the world. The "Specialty of the House" — and what this catalog is all about — is our diversified line of subminiature toggle and pushbutton switches. We make them in just about every shape, size, and configuration imaginable, so they're readily adaptable to a multitude of uses.

C&K high-quality, reliable switches combine maximum performance with minimum weight and size, and are available in one, two, three and four pole models. All of our switches feature rugged construction and simple mounting. This adds up to long-term, trouble-free operation.

Now, more than ever, when you want dependable, top-quality switches at a low price, specify C&K. We're the people who would rather switch than fight.

Momentary Pushbutton Switches

General Specifications

Contact Ratings: Gold contact surfaces on copper alloy terminals (epoxy sealed terminals are standard). 1 Ampere resistive load @ 115 VAC — 28 VDC. Designed for use in dry (very low energy) circuits

Insulation Resistance: 1000 megohms minimum. **Dielectric Strength:** 1000 volts rms at sea level.

Electric Life: 60,000 cycles minimum at full load. **Mechanical Life:** 100,000 make-and-break cycles minimum.

Operating Force: 1.76 oz min per pole. **Release Force:** 1.0 oz min per pole.

Max. Allowable Force on Plunger: 10 lb. **Pushbutton:** Nylon Plunger and cap.

Mounting Bushing: Cadmium w/ clear chromate over brass. High torque to withstand 12 in-lb with no distortion or loosening of parts.

Housing: Stainless steel. **Case Material:** General purpose phenolic.

CTS CORPORATION ELKHART, INDIANA

Rotary Selector Switch

WHY ENGINEERS SPECIFY CTS ROTARY SWITCHES

CTS Reliability. The heart of selector switch reliability is the wafer. CTS offers two wafers with uniquely reliable characteristics. The CTS selector switch 212 wafer is of a molded, glass alkyd, rivet-free construction which will not break if dropped or jarred. It eliminates mechanical shifting of stator circuitry and terminals and allows the construction of more compact switches. Automated manufacture provides unprecedented uniformity. In each production run, all switches are identical, terminal placement is exact and permanent—the result is trouble-free assembly into your circuit. The CTS 216 wafer employs the more conventional "clip" terminals but utilizes unbreakable glass reinforced alkyd for both the rotor and stator. The precision molded stator incorporates strut spacers to evenly space the contacts and eliminate radial shifting as well as a rib design to increase insulation resistance. Tight quality control on both wafers and detents from the raw material stage through final assembly and packaging assures you of the fine quality and reliability associated with all CTS products.

CTS Design Flexibility. CTS selector switches provi sands of variations of shorting and non-shorting including mixed shorting and non-shorting circuit com within the same pole. Design flexibility's further enha a wide selection of index assemblies, two wafer cons which can be intermixed on the same switch and attac manufactured power switches and variable resistors. C offers a one-source supply for the complete switch

CTS Military Switches. CTS types 211, 212 and 215 a able to meet the requirements of MIL-S-3786C, type S

CTS Switches are Made to Your Exact Specificati orders received for CTS selector switches are hand vidually and are custom manufactured to your exact s tions. The majority of applications can be met with which are custom designed from parts shown in this giving you the advantages of lower cost and faster

On special applications our engineering staff is at posal for designing the best and most economical s meet your exact requirements.

ELIMINATE DOWN-TIME ON ROTARY & THUMBWHEEL SWITCH

and also get accurate, precise control

UNLIMITED APPLICATIONS CDI switches offer fast sure settings and quick read-out for computer, automated and control equipment, and for test and programming applications, etc.

QUICK SERVICEABILITY Unique 5-second wafer replacement obsoletes other switches. Simply lift out old wafer, slip in new wafer. No unsoldering . . . no disassembling . . . no wire removing.

EXTREME VERSATILITY Regardless of size or shape needed CDI is well prepared to meet your every switch requirement.

THUMBWHEEL SWITCHES

C•D•I

Digital and Binary. Meet MIL-S-22710. For critical reliability applications. Available with internal lighting MIL-L-25467A. Switch modules with panel and switching elements separately sealed for complete protection are available. Bezel types have no visible screws when rear mounted.

PUSHBUTTON SWITCHES

NEW MINI 10-POSITION ADD/SUBTRACT

Retrofits most miniature thumbwheel switch panel openings. 8 & 12 positions available. Simply push one button to add, the other to subtract. Each decade mounts on ½" centers. Over 1,000,000-operation service life.

C•D•I

ROTARY SWITCHES

C•D•I

For critical reliability applications. Meet MIL-S-22710. Removable wafers permit quick changing of programs, configurations, circuits. CDI patented switches with dust covers available in sizes 2" x 2", 3" x 3" and 4" x 4" with lengths to accommodate up to 36 wafers. Operation may be manual, motor or solenoid.

CHERRY

THE LONG LIFE LINE OF PRECISION SWITCHES

WHAT'S BEHIND THE COMPLETE LINE OF CHERRY PRECISION SWITCHES

SPECIALIZATION

Our only product is switches. During the past 17 years we have produced more than 100 million switches. This specialization has resulted in development of an unusually-comprehensive product line.

SERVICES

Whether you need a simple modification of an existing switch or an entirely new design, Cherry's staff of competent engineers, are ready to give prompt, professional assistance with your switch problems.

FACILITIES

Our modern plant is equipped with tool room, including die and model shops; punch press department using advanced, progressive die techniques; plastic molding of both thermosetting and thermoplastic materials; Swiss-type screw machines; printed circuit and precision metal plating departments for expanded capabilities in manufacture of high density switching devices; a complete laboratory with extensive capabilities in electrical and mechanical endurance testing.

1 1/2 HP 250 VAC

E20 SERIES
20 Amp. 125-250 VAC
1 HP 125 VAC
2 HP 250 VAC

** Not available in 20 amp.

CHERRY Precision Switches

PANEL MOUNT PUSHBUTTON

Snap in mounting in choice of momentary, reset or "cheat" interlock action. Also available with special actuator to accept auxiliary push buttons.
Switch Body — 1¼" x 1" x 1/16".
Electrical Rating — 10 Amps., ¾ H.P., 125/250 VAC.

E69-10A Auxiliary Push Button

E69-00A Basic Momentary Action

E69-20A Push-Pull (Reset)

E69-30A Momentary & "Cheat" Interlock

*Also available with gold crosspoints contacts for low energy circuits (E68 series).

OPEN SWITCHES

Many variations in actuators, panels, terminals, circuitry, forces and electrical ratings.

Basic Open — Panel 2⅛" x 7/16" x 3/32".
S23 Ligh Force Series
5 Amp. 125 VAC.
S25 Standard Force Series
10 Amp. 12 VAC, 5 Amp.
250 VAC — ¼ H.P. 125-250 VAC.

-00T

Miniature Open — Panel 1 1/16" x ¾" x 3/32".
S30 Series — 10 Amp. 125 VAC, 5 Amp.
250 VAC, 1/6 H.P. 125-250 VAC.

-00W

Stack Type — Rating 7½ Amp. 125 VAC, 5 Amp. 250 VAC

S37 Series — Single Pole
Body — 1 41/64" x 57/64" x 3/16".

S36 Series — Double Pole
Body — 1 41/64" x 53/64" x 3/16".

Stock Switches are available in momentary or maintained contact action.

SUBMINIATURE MODULES

Special molded case design provides 2, 3, 4 and 5 circuit control in less space than individual ¼" thick switches fastened side-by-side.

E62-02HM 13/32" thick

E62-04HM ⅞" thick

E62-03HM 43/64" thick

E62-05HM 1 5/64" thick

Rating: 10.1 Amp. 125/250 VAC, ¼ H.P. 125 VAC.

GOLD CROSSPOINT CONTACT SWITCHES

Gold Crosspoint Contact Switches are availabl in these 5 types.

E21-00A Light Force Miniature

E53-00B Low Torque Coil

E63-00A Subminiature

E68-00A Panel Mount Pushbutton

S31-20P Miniature Open

Electrical Rating — 0.1 Amp., 125 VAC.

CONTACT DESIGN INNOVATION

FOR POS SWITCHING ENERGY SOL CIRCU

The Cherry point" conta uration . . . contact pr right angles other) provid mum contact and minimu of contact c terference.

- Solid state compatibility... high reliability in lo switching applications from 5 to 100 milliamperes 30 volts.
- Long life... measured in millions of operations.
- Extremely low insertion resistance... far below 50 ohms.
- Very high force per unit area contact pressure.
- Reduced susceptibility to contact closure interf from foreign particles.
- Reed switch reliability with snap-action switch uti

THUMBWHEEL ROTARY SWITCH

7 Digit Assembly with End Caps

Single Module

- Inline readout.
- Coded electrical outputs including BCD with complement and 2 commons in subminiature size.
- Modular construction.
- Choice of color combinations, coding, termination, readout symbols and front or back mounting.

LEVERWHEEL ROTARY SWITCH

A New Concept in Fingertip Control

All the advantages of a thumbwheel plus:
- Instant manual reset.
- Minimized decision time.
- Reduced operator fatigue.

CONTACTS — WE Alloy No. 1 (69% gold, 25% silver, 6% platinum).
WIPERS — Beryllium copper.
PRINTED CIRCUIT BOARD — G10 Glass filled epoxy plated with nickel and 100 millionths gold.
CASE, LEVERS, END CAPS AND WHEELS — Polycarbonate high impact.

MINIATURE SIZE: 1.865″ high x ½″ wide x 2⅞″ long.
SUBMINIATURE SIZE: 1⅛″ high x ½″ wide x 2¼″ long.
ELECTRICAL RATING: 115 V AC or DC at .125 Amp., Current carrying only 3 Amp., AC or DC.

MATRIX SELECTOR SWITCHES

MANUAL SWITCHING SIMPLIFIED
Presentation of the switching function in rectangular c nates provides the operator with a complete, panorami of the switching grid to facilitate rapid circuit selecti minimize error. No need for pins, clips or cumbersome as required in most programming devices.

C10-20A BASIC TEN POSITION TYPE . . . offers 100 select stations in 10 x 10 arrangement. Other arrangements of 10 position type includes 20, 30, 40 and 50 slider rails to provide 200, 300, 400 and 500 crosspoints.

C10-01A BASIC TWENTY POSITION TYPE . . . offers 200 select stations in 20 x 10 arrangement. Other arrangements of 20 position type include 20, 30, 40 and 50 slider rails to provide 400, 600, 800 and 1000 crosspoints.

ELEVEN STANDARD UNITS include one 48 position slider rails (2784 crosspoints), five 10 position types an 20 position types. In addition many custom designs c furnished with reasonable artwork and tooling set-up ch

SWITCHES THAT MASTER JOB REQUIREMENTS STANDARDS OR SPECIALS – YOUR DESIGN OR OURS

SNAP-IN SNAP ACTION ROCKER SWITCHES. Available in single and double pole, lighted and unlighted, maintained and momentary, 2 and 3-position. The momentary-lighted versions are the industry's lowest cost "lighted pushbutton" switches. Snap-in assembly saves labor, as well as material costs. Ask for data sheets on the 26 & 27 Series.

HALF-BY-HALF KEYBOARD SWITCHES. For printed circuit mounting. Available in SPST-NO, SPST-NC, SPDT and alternate circuit variations. Low bounce, low cost, and in the two-terminal versions, bifurcation provides extra high reliability. A variety of standard pushbuttons fit on the plunger. Ask for data sheets on the 34-Series.

LEAF SWITCHES designed to customer specs if desired, or quoted on existing customer design. Reliable delivery dates (customer references supplied on request). Versatile in-house tooling – will produce 90% of all existing leaf switches with no tooling charge. Ask for the "Leaf Switch Design Guide."

DELUXE INDICATOR LIGHTS. Lamp and lens replaceable from panel front. Two-terminal versions are standard. Midget and submidget flange-based lamps used. Many options, lens shapes, colors, and variations available. Ask for data sheets on the 33 Series.

SUBMINIATURE SLIDE SWITCHES. World's n life slide switches w snap action in som SPDT and DPDT . . . in switch measuring only .25' .50" long x .30" wi SPST versions han amp inductive l 120V 60 Hz. N brids are continually being born. Ask for data No. 23-021.

HI-DENSITY MULTI-POLE MODULAR SWITCHES can be p.c. boards as is combination; e.g., t 3P3T 3-position s 4PDT and 6PDT s are available in p push-off versions, n tary versions, push half-rocker button, of any make-before-break or break-before-mak bination of poles. These are so reliable, they're the latest fighter-bombers. Ask for data sheets 23-004 Series.

QUALITY PRODUCTS THROUGH CREATIVE ENGINEERING

STANDARD SLIDE SWITCHES

Wide Range of Basic Types Available

TOP ACTUATED SLIDE SWITCHES

Available from current rating of 3.0 amps AC 0.5 amps DC at 125 volts to 11.0 amps AC at 125 volts, and 8.0 amps DC at 12 volts.

Types include 1 pole, 2 pole, 3 pole and 4 pole in two positions, three positions and four positions. Detent or spring return action.

Variety of mounting options, terminal choice and supplemental features available. Request bulletin 2085-68.

"SYDEWYNDER®" SIDE-ACTUATED SLIDE SWITCHES

Available as single and double pole in 2 positions or 3 positions. Current rating 3.0 amps AC 0.5 amp DC at 125 volts. Mount with two mounting holes on 1⅛" centers or snap into printed circuit board. Variety of knob lengths and colors available. Particularly suitable for applications where switch actuation from side of switch saves extra mechanical assembly. Request bulletin 2085-68.

SWIDGET® MINIATURE SLIDE SWITCHES

Available in types having up to 3 poles and 4 positions. 2-position switches mount on .812" centers; other switches have slightly longer mounting centers. Side or top actuated. Detent or spring return. Variety of terminals and knob sizes. Rated at 0.5 amp AC/DC at 125 volts. Request bulletin 2093-70.

"SWIDGET® JR." SUB-MINIATURE SLIDE SWITCHES

Available as SPDT and DPDT. Mount on 0.562" centers. Overall length .762". Rated 0.5 amp AC/DC at 125 volts. Request bulletin 2093-70.

ROCKER SWITCHES

Dress up your unit with handsome CW rocker switches. Four basic rocker superstructures can be added to most CW models. Types include 2-position switches with one, two, three or four poles, in a variety of mountings, rocker knobs and features. Rated from 3.0 amps AC 0.5 amp DC at 125 volts, to 11.0 amps AC at 125 volts and 8.0 amps DC at 12 volts. Request bulletin 2085-68.

C-W products assure high reliability at reasonable prices. Full cooperation on custom engineering, field service, emergency stocking and special models.

See Sec. 4700 for complete line of C-W-Resistors, Wire Wound, Potentiometers, and Specialties.

CLARE-PENDAR™ KEYBOARDS

THE FIRST LSI/MOS KEYBOARD

A single MOS package contains all of the encoding circuitry for this simple and reliable new keyboard. Two-key-rollover, delayed strobe, even or odd parity, positive or negative logic are all standard features. DTL and TTL compatible, most applications require only 200 mw total power. Dual and Tri-function ASCII keyboards are available from stock.

KEYBOARD SWITCHES

The S-820 Keylogic switch is a new generation in reliable reed keyboard switches. Unique square design and frame mounting assures precise keytop alignment and easy switch replacement from front of panel. Lighted versions, five keytops shapes and seven colors make the Keylogic series the most versatile keyboard switch family available.

LIGHTED GANGSWITCHES

Clare-Pendar is the worldwide leader in quality lighted gangswitch assemblies. Choose from wiping action or snap action switch types, up to six poles, and single-light or multi-light lenses. A wide variety of mechanical interlocking and solenoid-held actions are available. Call your Clare-Pendar sales engineer for a demonstration and design assistance.

DATA ENTRY AND CALCULATOR KEYBOARDS

Small keyboards with any key layout are a Clare-Pendar specialty. A wide range of standard components permit custom designs to meet your needs: lighted switches, up to two N.O. reed contacts, five button shapes and seven colors, hard contact or BCD output. Several 10 and 12 key types available from stock.

CUSTOM SWITCH AND LIGHTED DISPLAY ASSEMBLIES

Custom gangswitch assemblies for large volume use are a specialty, of Clare-Pendar. Inter-locking assemblies using standard switches often can solve a tough control problem. Our military approved light and optics lab can obtain solutions for your display problems. For practical and responsible design assistance, call on Clare-Pendar.

SWITCHLIGHTS

CLARE-PENDAR™

SWITCHLIGHTS

Clare-Pendar is the **full line** switchlight supplier. Two pole and six pole wiping action switches feature 100,000 cycle life and low contact bounce for logic level applications. Two snap action models cover the higher current ranges. Three solenoid assist models offer added flexibility. All of these switches can be used in Clare-Pendar standard gang-switch frames or in custom frames for your special requirements. A wide variety of lens shapes, styles, colors, and display modes is available.

SNAP-IN PANEL MOUNT SWITCHLIGHTS

Adapters in several sizes permit economical snap-in panel mounting of all Clare-Pendar switchlights. A series of snap-in (integral switch) single-lights offers an unusual combination of economy and low bounce performance for computer and peripheral equipment applications.

MINIATURE SWITCHES

This peanut size switch comes in three models: lighted, unlighted, or industrial and military approved (QPL 8805/64). The momentary snap action mechanism assures positive action. Your choice of button color and mounting bezel.

COOK ELECTRIC PRESSURE SWITCH

The bellows sensor, providing fine control of field adjustments, is designed for long life capability. The open construction provides for economy while still maintaining Cook Electric quality.

Rugged construction is offered with the integral welding switch bracket to the pressure sensor housing.

Materials: Nickel plated brass housing and bracket. Phosphur bronze or berylium copper bellows.

Switch Output: UL rating, 15 amp, 125, 250 or 480 VAC screw terminals.

PART NUMBERS

Internal Thread Inlet ¼-18 NPT	External Thread Inlet ¼-18 NPT	Pressure Range Adjustment
714-0101	714-0201	Vac. Gage to 15 PSIG
714-0102	714-0202	5 to 25 PSIG
714-0103	714-0203	15 to 50 PSIG

FEATURES

- Field Adjustability
- Economy
- Rugged Open Construction
- 15 ampere UL Switch Rating
- Long Life
- Inlet mounting any attitude

DIAPHRAGM PRESSURE SWITCHES FOR ECONOMY AND FASTER DELIVERY

CUSTOM SET FOR PNEUMATIC AND HYDRAULIC APPLICATION

ENCLOSURES SOLVE ENVIRONMENT REQUIREMENTS

For absolute pressure requirement . . .
Cover is hermetically sealed and evacuated.

For gage pressure requirement in degrading environment . . .
Cover is hermetically sealed with standard atmosphere.

For differential pressure requirement . . .
Cover is vented to reference port.

All covers are drawn non-corrosive stainless steel. On hermetically sealed units integrity is assured by glass-to-metal sealing of the connector.

10SL-3P connectors are normally furnished. Other connectors can be provided on special order. A "commercial" protective cover is also available for even greater savings when the advantages of a sealed, stainless steel cover are not required.

	TYPE 716	TYPE 717	TYPE 718
Pressure Range of Setting	100 To 3000 PSIA	3 To 10 PSIA 20 To 500 PSIA	10 To 100 PSIA
Setting Tolerance	±3% at a specific temperature ±10% over ambient temperature range		
Dead Band Average	20% of setting		
Proof Pressure	4500 PSIA	2.5 x setting minimum	2.5 x setting minimum
Burst Pressure	7500 PSIA	5 x setting minimum	5 x setting minimum
Ambient Temperature	−65°F To 275°F		
Switch Contact Form	SPDT		
Current Rating	5 amp resistative at 28 VDC or 115 VAC		
Vibration	10G at 55 to 2000 CPS		
Shock	15G—11 MS MIL-E-5272C Procedure V		
Cycling Life	50,000 cycles minimum at .25 amp 25,000 cycles minimum at 5 amp.		
Weight	0.3 lb.	0.3 lb.	0.5 lb.

FEATURES

- Military reliability in accuracy and repeatability of setting.
- Zero leakage.
- Corrosion protection.
- Long system life.
- Versatility in your system design.
- New economy.
- Fast delivery.

718 717 716

TYPE 719 ADJUSTABE PRESSURE SWITCH for INDUSTRIA APPLICATIONS

A field proven pressure capsule has bee to a fully adjustable pressure switch.

Three pressure ranges are available all requirements.

Adjusting the pressure setting can with a spin tight wrench, box wrench tools. Settings in a range of 25:1 are with the lower range switch.

The sheet metal cover is held in pla screws and is readily removed for eith ing the pressure setting or connecting the screw terminals on the snap switc ber grommet is provided for open can be removed to accept ½" condui

Nothing interferes with the easy installation of the wiring to the pressu

This compact switch may be panel mounted or mounted directly on Standard fittings are ¼" NPT, male or female as desired.

Part Numbers Female Thread ¼"-18 NPT	Mate Thread ¼"-18 NPT	Nominal Setting PSIG	Setting Range - PSIG Minimum Act	Minimum Deact	Maximum Act	Maximum Deact	Dead Band Max. PSIG
719-0001	719-0011	10	3.5	0.5	25.0	22.0	6
719-0002	719-0012	60	21.0	1.0	125.0	105.0	30

Population Explosion

this case, the "explosion" represents the largest array f-the-shelf" switches and relays in the industry . . . with bility measured in hours — rather than weeks or months.

name it . . . standard or special. Toggle or rocker. utton or slide. Rotary or snap-acting. Illuminated or luminated. Avocado green or harvest gold. Military or ercial. Electro-mechanical or solid state.

usands of "in-stock" devices . . . a nationwide network of authorized distributors . . . 48-hour availability on popular, standard items . . . field help from 90-plus field offices . . . design innovation. That's our world. And only some of the reasons why Cutler-Hammer should be your No. 1 source for switches and relays — if we aren't already.

For more information, contact our nearest sales office or stocking distributor. For a complete line catalog — a big 104-pages — write Cutler-Hammer, Dept. EEM, 4201 North 27th Street, Milwaukee, Wisconsin 53201.

witch No.1 More than just switches: prompt availability, field help, innovation, quality assurance too.

CUTLER-HAMMER

SPECIALTY PRODUCTS DIVISION, Milwaukee, Wis. 53201

Cunningham: hallmark for reliabilit in multi-point, high-density switching and scanning.

Cunningham's 16-year experience in switching can help you solve problems in high-frequency communications, data acquisition, logic control, computer-controlled telemetry, audio, antenna, radar, component test equipment, and low-level instrumentation.

Our complete line of crossbar and reed matrix switches makes it easy to tailor units to your specific requirements. We can also produce scanners, subassemblies, packaged switch modules and components for switching systems—using latest modern techniques for compactness and reliability.

Cunningham Hystareed™ Magnetic Latching Relay

Operates without permanent magnets or holding current. Latches and stays latched as required. Will not change programmed state due to vibration, shock or power interruption. Not affected by shunting. Needs no adjustment or calibration. Greater transient rejection and isolation. Proved reliability up to 30 million operations. Adapts to matrix for multiple switching—also operates as standard relay for scanning. Optional suppression diodes can be factory-installed.

Cunningham Reed Switch Matrix

Unique design shields and separates switches from controls—gives maximum high-frequency signal isolation. Negligible crosstalk. Low induced and thermal noise. Can be directly addressed by all computers using +5-volt logic. 100% random access—any number or combination of crosspoints can be set, any place, any direction, without affecting other crosspoints. Reliability proven to 100-million operations per crosspoint. Includes all signal switching and integrated circuit logic required to interface directly with computer. Separate control and signal sections for easy inspection and maintenance.

GLO-CAT R

(glow-lam dicator), a cessory w takes 1½ less panel s than a calling card, yet ca displays action, pattern or p gram in a 5x10 matrix or c bar. Shows condition of as a as 50 switches, crosspoins other devices in a pattern f clear dots of light. Operates r standard 5-volt logic. Can be ily multiplied to match any n size or configuration.

Type A
Crossbar switch.

Cunningham Crossbar Switc Matrices

Ultra-reliable, versatile. Ide wideband, high-frequency sw ing. Two patterns: Type A group-to-group switching; Ty for group-to-one switching. E

Type
Cross r switch.

ay b controlled by coordinate or irect lectromagnetic actuation. Both ver the full range of data equi ion requirements, and han- le v ages from 1 microvolt to 000 lts—usable up to 30 MHz, 0-m ion operations per cross- oint ssured—up to 100-million re mmon. Excellent low-level nd d circuit performance. Both and signals dc to 10 megacycles with igh isolation. Speeds to 65 losu s per second. Readily pro- ram able by every control de- ice om tape to direct computer npu

OH (Ordinate Holding Switch)

A ole, 12-position magnetic ato ng relay with random access ap ility. Has high switching pe , low power requirements, and compactness well suited for ap cations where several switch- es ust be used in matrix config- ur ons, and controlled by digital cir its. Magnetic latching gives ai afe protection against power ai re. Plug-in modular units are ea y replaceable—simplify main- en nce, reduce downtime. Com- pa design (3½"x2½"x3½") and ef ent manufacture contribute to w OHS switch cost.

D a Acquisition

C ningham Crossbar Scanners of efficient data acquisition in co pact space, at competitive prices. They are small switching systems, capable of connecting many signal circuits to one circuit. Or distributing one signal circuit to many—sequentially or in accordance with BCD program signals from peripheral equipment.

These scanners are excellent for handling low-level signals (less than 1 microvolt). Their careful design permits accurate routing and excellent fidelity in transmitting analog or digital data. Also used for data logging, signal distribution systems, and automatic cable harness and printed circuit card continuity measuring systems.

Cunningham Model 309-G Scanner.

A 600-point guarded scanner used in low-level test and measurement systems, and computer-programmed data acquisition. The 309-G provides capability of connecting many signal points to one point or distributing one signal to many points, sequentially or individually and in any order—by front panel control or a signal from peripheral equipment. Channel capacity of the scanner is from one hundred 6-wire to six hundred 1-wire channels.

The 309-G is particularly suitable for switching low level signals in the order of 1 to 100 microvolts.

Cunningham Reed Scanner Module.

A 3½"x19" panel, standard rack-mounted scanner module. Fits EIA/WE panel hole spacings. Supplied with all mating connectors, both signal and control.

Has plug-in capacity for 10 scanning-type switching cards, each of 10 channel capacity. Expandable in 10-channel increments of 1, 2 or 3 poles per channel. 3-pole card is especially designed for low thermal type scanning.

Reed Scanner module Card—left to right: Control card; reeds exposed; reeds covered; operating coils on reverse side.

Cunningham Reed Scanner Module Card.

Due to unique design, the scanner switching card is suitable for instrumentation-type switching where guarded measurements are required. It is designed to interface easily to measuring equipment. Several readily available modular-design control cards offer great flexibility for interfacing to most modern computers and/or peripheral equipment. Power requirement: +5 volts, 100 milliamps.

Cards may be purchased separately and are available for parallel or serial loading. Control cards are available for interfacing with binary, binary coded decimal and straight decimal instructions.

Cunningham Corporation

SUBSIDIARY OF GLEASON WORKS

HONEOYE FALLS, NEW YORK 14472

DAVEN SUB-MINIATURE ROTARY

Newest & Smallest 20 Position Rotary Switch

SERIES S 9/16" DIAMETER

Bulletin SS88

Available in 1 pole 2 to 20 pos/4 pole 2 to 5 pos. Up to 10 decks. 18°, 22½°, 36°, 45°, shorting & non shorting

MECHANICAL:

Rotational life: B 25,000 cycles min. @ .150 amps 28V. DC @ 85°C
Stop torque 5 in. lbs.
Mounting Double flatted bushing ¼-28 UNF-2A Thread
Moulded parts: P Diallyl phthalate
Metal parts except contacts Stainless steel
Contact Material Copper, silver plated, gold overplate
Wiper Beryllium copper, gold plated

ELECTRICAL:

Current carrying capacity	3 amps.
Current switching capacity	.500 amp.
Contact resistance, after life, max.	.020 ohms
Contact resistance, initial ave.	.004 ohms
Contact resistance, initial max.	.010 ohms
Insulation resistance	50,000 me
Dielectric withstanding voltage	600 vrms

SERIES G & K ½" DIAMETER

MIL-S-3786C/20
Bulletin SSG79
Bulletin #SK79

Available in one pole 2 to 12 position through 4 pole 2 to 3 position types. 30°, 36°, 60° shorting & non shorting

Series G is a true ½" diameter switch, designed to meet military standards. It is completely sealed with double "O" ring shaft seals and an epoxy sealed contact panel. Hub and shaft are corrosion resistant stainless steel. Contacts may be flatted and pierced or pin type for PC board mounting.

Series K provides instrument and commercial users a ½" diameter switch with all the electrical characteristics and mechanical life expectancy of the Series G switch at more economical prices. Contacts may be flatted and pierced or pin type for PC board mounting.

SERIES X ½" DIAMETER

MIL-S-3786C/30
Bulletin SX89

Available in one pole 2 to 12 position through 4 pole 2 to 3 position types. 30° shorting & non shorting, 60° non shorting

Series X switches with radial contacts meet both military and instrument needs for a stackable ½" diameter switch, available up to 5 decks. Special silver alloy contacts permit these sub-miniature units to switch currents up to 2 amperes.

SERIES L 7/16" DIAMETER

MIL-S-3786C/29
Bulletin SL87

Available in one pole 2 to 12 position through 4 pole 2 to 3 position types. 30° shorting & non shorting, 60° non shorting

Series L switches, 7/16" in diameter, are available in single or double deck models. They feature a simplified, rear-mounted detent. Like Series X, they are capable of switching up to 2 amperes and carrying up to 5 amperes.

SPECIAL SWITCHES

Solenoid-operated switches
Pre-wired switch assemblies
Spring return switches
Hermetically sealed switches
Terminal board switches
Progressive shorting swi

See YELLOW SECTION for Local Offices, Phones

ELECTOR SWITCHES DAVEN

SWITCH-IN-KNOB MOUNTING

Where space behind the panel is limited, Series S, G, K, and X switches can be furnished with Switch-in-knob mountings. With this mounting, G and K switches require only 3/16" space behind the panel for the terminals. Radial lug Series X switches need a minimum of 7/16" for single deck models and .275" for each additional deck.

SERIES P ½" DIAMETER

Bulletin SP90

36° shorting and non shorting. 1 pole 2 through 10 pos. 2 pole 2 through 5 pos.

LOW PROFILE P.C. SWITCH

Low profile printed circuit switch with all the reliability and internal features of the Daven Series G switch repackaged for use in printed circuit applications. Bulletin SL90.

...th increases 9/16" per deck for each additional deck ...ve those listed. Tol: ±.015 unless otherwise specified.
...TE: Dimensions shown are for switches up through 4 ...cks. For switches 5 decks and up, 1-7/16" dimension is ...reased to 1-19/16" and length increased ¼".

...OW TO ORDER

Order by using a six-place "shorthand" description

example: | 2 | 1 | 5 | X | M | 12 |

| 2 | | | | | |

...LACE I
...dicates number of decks:
... = One Deck 2 = Two Decks
... = Three Decks, etc.
...ample indicates Two Decks

| 2 | 1 | | | | |

...LACE II
...dicates number of poles per deck:
... = One Pole 2 = Two Poles
... = Three Poles 4 = Four Poles
...xample indicates 1 Pole per deck

| 2 | 1 | 5 | | | |

...LACE III
...dicates degrees of spacing between ...ositions:

	Shorting		Non-Shorting	
	1-15°	6-18°	1-30°	6-36°
	2-11¼°	7-60°	2-22½°	
	3-7½°	8-36°	3-15°	8-60°
	4-6°	9-20°	4-12°	9-40°
	5-30°		5-18°	

Example indicates 30°

| 2 | 1 | 5 | X | | |

PLACE IV
indicates series of switch:
X = X series

| 2 | 1 | 5 | X | M | |

PLACE V
indicates Shorting or Non-Shorting:
M = Shorting (make before break)
B = Non-Shorting (break before make)
Example indicates a Shorting Switch

PLACE VI
indicates number of positions per Pole
1 = 1 position 2 = 2 positions
3 = 3 positions 4 = 4 positions etc.
Example indicates 12 positions

The Suffix KN after the position number indicates Switch-In-Knob mounting.
The Suffix CR after the position number indicates continuous rotation.

*The letter "T" after the type number indicates terminal board(s) mounted on the side(s). In such cases the dimensions of the contact panels are different from those listed in the standard switch section. All other switch dimensions of depth, spacing and electrical characteristics are the same.

The letter "S" after the type number indicates Solenoid Operating switches. All switches are supplied with detents for all "Live" contacts unless other requirements are specified.

TWX 710-220-1747

DIGISWITCH®

Converts directly from dial setting to coded electrical outputs.

Series 300 general purpose DIGISWITCH

This is a compact, finger-actuated module only ½" wide, with 8, 10, 12 or 16 dial positions. Stops may be specified to limit rotation. More than 200 standard types of are available, covering a wide range of capabilities such as the following:

- ☐ Octal-to-binary conversion
- ☐ Decimal-to-binary conversion
- ☐ Conversion to binary with complement and provision for diodes
- ☐ Voltage divider
- ☐ Capacitance decade
- ☐ Resistance decade
- ☐ 8, 10, 12, 16 position switches
- ☐ Shorting and non-shorting

As many individual switch modules as required may be grouped into a single asse for simplicity of mounting. No separate escutcheon plate, secondary brackets or ot special hardware is required—only four screws.

Series 13000 front-mounted DIGISWITCH

The Series 13000 DIGISWITCH is identical in every way to the Series 300 except the case is designed so that an entire assembly can be mounted from the front of t completely covering the panel cut-out. No separate escutcheon plate or other har is required for mounting. The same codes, dial positions and other features availa standard Series 300 Back-Mounted configuration are also available in the Series 0 DIGISWITCH.

Series 9000 sealed and Series 19000 dust-sealed DIGISWITCHES for industrial environments

The Series 9000 and Series 19000 DIGISWITCHES are designed for trouble-free ope in severe environment. The Series 9000 is sealed per MIL-S-22710, Method I for operation near heavy cutting oil or water concentrations, airborne contaminants and salt spray and extreme humidity.

The Series 9000 DIGISWITCH has the switch elements contained in a separate cha within the switch case. An "O" Ring around the drive shaft and potting around the printed circuit board in the rear of the switch case completes the seal.

Output terminals can be directly soldered or will mate with standard printed circui board connectors. Some modules in the Series 9000 and 19000 are available with wi or other special terminals.

The construction of the Series 19000 is exactly the same except the potting of the printed circuit board at the rear of the case and in the "O" Ring seal are left out Series 19000 provides an excellent dust seal in applications where total sealing is not important. Most of the codes available in the Series 300 are also available in the Series 9000 and 19000.

Series	Dial Character Height
300, 13000	0.235 (8, 10, or 12 position)
9000, 19000	0.160 (16 position)

Life: Over 1,000,000 detent operations—all switches.

DIGIVIDERS/DIGIDECADES

Thumbwheel operated voltage dividers and resistance decades.

Digividers and Digidecades are specifically designed for applications where precise digital setting of resistance or voltages are required. They are easy-to-read and op require little panel space, and give 10 times more accuracy than a potentiometer— at little added cost. In addition, the new units provide reliability, low contact resista repeatability of setting. For example, a change from 13 ohms to 913 ohms is made one flick of a finger. Digividers are available with either Kelvin-Varley or Poggendorf circuits, a wide range of input impedances, and an accuracy of 0.1% of full scale. Dig resistance decades provide an accuracy at 25°C of 1% of setting.

All DIGISWITCHES and MINISWITCHES conform to the requirements of MIL-S-22710

MINISWITCH®

When limited space presents a problem.

* MINISWITCH dial character height: 0.200 (8 or 10 position)
0.150 (12 position)

Series 8000 MINISWITCH*—Miniature, non-sealed

Compact and versatile, the Series 8000 provides substantial savings in panel space. Each switch module requires a panel cut-out only 0.96" high x 0.5" wide. Modular construction permits the grouping of any combination of switch modules into a single assembly. No separate escutcheon plates, special mounting brackets, or other hardware is required to mount an entire assembly.

All Miniswitches are available in eight or ten dial positions—decimal or coded electrical output. Dial stops can be provided to limit the number of dial positions. Internal replaceable lighting is also available as an option in all MINISWITCH Series. Some models in the Series 8000 MINISWITCH have provisions for mounting components directly onto the printed circuit board.

Series 12000 Miniature Pushbutton rotary switch

Series 12000 is a miniature pushbutton rotary switch which permits panel sealing to prevent contamination of switch and panel interior. Individual modules can be sealed from dust and moisture. Recommended for military communications and to meet requirements of MIL-S-22710A.

The case is metal. When properly grounded to the panel, this feature provides effective shielding against radiated electromagnetic interference.

Series 12000 is available in all 8- and 10-position standard Octal and BCD Codes including complement and "true, not-true" functions. Width: .480 inch. Height: 1.30 inch. Weight: less than 0.4 oz. Low profile; button extends only 3/16" beyond the panel. Modules can be mounted on 0.5 inch centers. Metal case, sealed glass window, optional replaceable internal lighting, diodes may be mounted on PCB.

Series 200 and 700 MINISWITCH*—Miniature sealed

The Series 200 and 700 are the same miniature size and mounting conformity as the Series 8000 MINISWITCH but are specifically designed for use in equipment which must operate in severe environments (sands, dust, salt spray, high humidity, temperature extremes, explosive atmosphere, etc.). All switching elements are enclosed in a sealed chamber within the switch case. Sealing is per MIL-S-22710, Method I.

Series 200 contains wire leads as output terminals and no part of the printed circuit board is exposed. Series 700 has printed circuit board output terminations potted at the entry point of the case.

MINILEVER®

New Lever-Actuated Rotary Switch

Series 28000—Rapid Setting

The Series 28000 MINILEVER® rapid setting, lever switch is an innovation in thumbwheel type switches. It is designed to increase operator efficiency where frequent, rapid switch settings are required.

By employing a setting lever which actuates an internal gear, the operator can rotate the dial a complete revolution by moving the lever in an arc of only 90 degrees. The operator has the advantage of being able to make up or down decisions quickly in applications that require frequent, rapid changes of switch settings.

The MINILEVER assembly is interchangeable with other assemblies of Digitran's miniature, thumbwheel switches. MINILEVER is available in 8, 10 and 12 positions with dial characters .200" high.

Features and options available in the various series.

DALE® for Optimum Value in Surge Arrestors

■ SERIES LVP-6 *Low Voltage Protector*

Designed to mount on printed circuit boards to protect solid state circuitry from transients appearing on low voltage DC circuits. Nanosecond response. Automatically restores circuit to normal when transient has passed. Transients substantially above rated surge current would cause failure of the LVP-6 in a shorted condition—still safeguarding the valuable circuit components.

LVP-6A Edge Mount

LVP-6B Flat Mount

PROTECTIVE CAPABILITIES

Clamping Voltage: 6.2, 6.8, 7.5, 8.2, 9.1, 10, 11, 12, 13, 15 volts.

Shunt Capacity: 15 μf.

Operating Temperature: −55° C to 85° C

Storage Temperature: −55° C to 125° C

PHYSICAL SPECIFICATIONS

Designed for edge or base mounting. Body Dimensions = .500″ L x .500″ W x .312 H. Lead Dimensions = 1″ ± 1/32″ L x .032″ dia.

■ SERIES SPA *Secondary Power Arrester*

Designed for fuse or junction box mounting to protect against direct or indirect lightning and other transient voltages. Unit has hermetically sealed pre-ionized spark gap for increased sensitivity and stable breakdown voltage level. Exceeds all applicable NEMA, USAS, and IEEE standards.

PROTECTIVE CAPABILITIES

DC Arc-Over Voltage: SPA-100 (120 VAC) 500-700 volts; SPA-200 (277 VAC) 600-900 volts. **Fast Rise Arc-Over Characteristics:** Typically 1500 volts with 10KV μsec. pulse applied; **Bypass Capability:** Will withstand repeated 10KA (10x20 μsec.) current surges. Power follow current extinguished in 1/2 cycle or less. Voltage between terminals less than 2000 volts when conducting 10,000 amps of surge current. **Insulation Resistance:** Greater than 100 megohms. **Shunt Capacity:** Less than 25 pf.

PHYSICAL SPECIFICATIONS

Spark gap hermetically sealed with soft solder. Overall dimensions: 1-3/4″Dx3″L. Two 18″ leads provided for circuit connection. Has 1/2″-14 NPSL conduit fitting with nut for mounting in any position indoors or outdoors.

■ SERIES LA *Miniature Size—Maximum Circuit Protection*

Patented design insures much greater reliability and repeatability than stand gap designs. Widely used to protect communications equipment from lightnir guard industrial controls and radios from heavy transient spikes.

PROTECTIVE CAPABILITIES

Spark-Gap Arc-Over Voltage: LA20 = Factory adjustable from 500 to 6000 VDC ± 2 10%; LA9 = Factory adjustable from 500 to 5000 VDC ± 20% (10% available **Capability:** LA20 = 10 current surges each rising to 15,000 amps peak in 5 μsec. and o ing total charge of 20 coulombs. Derate to 50% below 1500 V. LA9 = 100 current r 300 amps peak with 2x4 millisecond wave shape. Derate to 10% when set below 75 V. types will perform as stated without damage to arrester or equipment attached and it than 20% change in original DC breakdown voltage. **Insulation Resistance:** Greater t n megohms initially and greater than 10 megohms after rated current surges. **Shunt** LA20 = 8 mmfd, LA9 = 3.5 mmfd.

PHYSICAL SPECIFICATIONS

LA20 = 3-3/8″ outside length. Body 2-1/16″ L x 1-1/4″ D. Weight: 5 oz. LA9 = 1-3 side length. Body: 1″ L x 3/4″ D. Weight: 2 oz. **Mounting:** Clip, stud or flange. LA20 = 6-32, 8-32, 10-32 stud or wire; LA9 = 4-40 stud or wire. **Seal:** LA20 and LA9 h

■ ADDITIONAL MODELS

- Aircraft lightning arresters of all types
- Arresters for high voltage circuits
- Miniature transient suppressors for circuit board mounting.

STATE CURRENT LIMITING FUSES

The Current Limiting Fuse provides unexcelled performance for critical circuit protection by opening at extremely fast, predictable current-time overloads. It offers timed protection required in circuits with predictable starting and load surge currents yet require fast protection against damaging spikes or overloads.

This is a one-shot device employing a low resistance Electra cermet fired junction on a non-conducting glass subtrate. No arc, plasma, or vapor may escape the package.

CRETE MICRO RESISTOR CHIP...TF50P

This discrete micro resistor chip, 50 mils by 50 mils, offers versatility for micro circuit designers. Electra cermet is used with glass as a passivation material. It has gold terminations for mounting. The back of the chip is gold screened to provide substrate mounting (heat sink.)

- Resistance range . . . . . 10 ohms to 1 Megohm in standard decade values.
- Tolerance . . . . . ±5% standard (J); ±1% available (F).
- TC of R . . . . . ±100 PPM/°C maximum.
- Matching . . . . . to ±0.25% available.
- Power rating . . . . . 0.01 watt @ 125°C ambient, chip mounted in free air. Gold backing is provided for heat sinking.

INSTRUMENT and CONTROL SWITCHES

- pre-wired
- for switchboards
- for distribution panels
- for engine-generator sets
- for machine controls

Pre-wired for easiest installation—you connect only the instrument and line wires—these dependable switches meet highest public-utility and military standards, yet cost far less than you'd expect.

Fit standard three-point panel-drilling for replacement service and original-equipment uses. Furnished with escutcheon plate, mounting hardware, wiring diagram, and round, oval, or pistol-grip handle.

Series 24 includes voltmeter, ammeter, ammeter-voltmeter, wattmeter, synchroscope, power-factor meter, circuit-breaker, motor-control, and special transfer switches. Write for catalog.

EECoSWITCH Thumbwheel Switches

Revolutionary 1776 Switch Series

Widest Line — Lowest Cost

- **$3.00 IN SINGLE QUANTITIES**
- Less than $2.00 in large quantities
- Large, easily read, dial characters
- Plastic window readout protection
- Sealed against dust
- Back of panel mounting
- Up to 34 station assemblies
- Solder tab termination
- Diode provisions
- Double width switches — triple legend area
- Current Carrying Capacity 10 microamps to 3 amps
- Operating Range −20°C to +75°C
- Two Year Warranty

PARTIAL LIST OF CODES AVAILABLE

- Decimal • BCD • BCO with complement
- 9's complement with complement
- Excess 3 • BCD with complement
- 7 bar indicator • 12 position BCD
- 12 position BCD with complement
- 2 pole, double throw

200 SERIES
GENERAL PURPOSE

- Universal dimensions
- Wide selection of codes
- Large, easily read dial characters
- 2, 8, 10, 12 or 16 positions
- Switches individually replaceable in mounted assemblies
- Positive detent action
- 1-34 station assemblies

5000/6000 SERIES
MINIATURE, SEALED AND LIGHTED

- Sealed — 6000 Series
- Unsealed — 5000 Series
- Replaceable lamp
- Cable, circuit board or wire loop terminations
- Plastic window readout protection
- Numerous codes/options

300 SERIES
GENERAL PURPOSE, SEALED AND LIGHTED

- Large, easily read dial characters
- Replaceable lamp
- Double width switches — triple legend area
- Switches individually replaceable in mounted assemblies
- Reverse field lighting option

8000 SERIES FOR DIRECT MOUNTING ON PRINTED CIRCUIT CARDS

- **Mounts directly on user's motherboard**
- Reduces wiring costs
- Eliminates switch mounting hardware
- Provides for fast replaceability of both switch and PC card
- Sealed against dust
- Service life of over 1,000,000 detent operations
- 6 optional colors for coding switch functions

700/800 SERIES
MINIATURE, SEALED AND LIGHTED

- Sealed — 700 Series
- Unsealed — 800 Series
- Unlighted or lighted with long life permanent lamp
- Double width switches —triple legend area
- Switches individually replaceable in mounted assemblies
- Circuit board terminations

SPECIFICATIONS

General	EECO Switches are certifiable to MIL-S-22710
Plastic Parts	Polycarbonate per Federal Specifications LP-393A Low moisture absorption nylon per MIL-P-17091
Metal Parts	Current carrying — heat treated beryllium copper Structural — corrosion resistant metals
Contacts	Rotor — corrosion resistant precious metal alloy Stator — .000080 (min.) gold per MIL-G-45204, Type II, over low stress nickel per QQ-N-290, Class 2 over copper
Printed Circuit Board	Laminated glass epoxy, copper clad one or two sides with 2 oz. copper per specification MIL-P-13949 Type GE

All switches are offered as complete assemblies or as individua switch modules with a TWO YEAR warranty.

ELECTRONIC PRODUCTS DIVISION

Distributors: Hall-Mark Electronics • G. S. Marshall Company • Schweber Electronics

ntil now, choosing between mercury or reed switches eant a compromise. Mercury switches offer long life d no contact bounce, but they are bulky and limited one mounting position. Reed switches are smaller d mount in any position, but have a shorter life, riable contact resistance, plus significant contact unce and noise.

But **there is no need to compromise any more.** Now gcell Mercury Film Switches combine the advanges of mercury and reed switches. Magnetically tuate Logcell Switches are half the size of miniare reels switches — occupy only 1% of the volume conventional mercury switches. They operate in y position, have no contact bounce or AC noise, d withstand moderate shock and vibration. Wherer precise limit, proximity or pushbutton switching required, consider Logcell Switches:

- Long life — tested to billions of cycles
- Operation in any mounting plane
- No contact bounce
- Form "C" SPDT contacts
- No measurable AC contact noise
- Thermal noise less than 1.0 microvolt
- Linear repeatability to 0.005 in.
- Inherent memory — switch latches in either position until reactuated

Get complete information about revolutionary new Logcell Mercury Film Switches—and Logcell Mercury Film Relays. Write to Fifth Dimension Inc., Box 483, Princeton, N.J. 08540 or call (609) 924-5990.

RWB SPECS **Also ask about our red, white and blue specifications which match Logcell performance and cost to your application.**

SWITCHES

CR103 TYPE F THUMBWHEEL SWITCHES

General Electric's CR103 Type F Thumbwheel Switch can save you panel space by replacing old "wafer"-type switches. It can be used wherever data are manually inserted into a machine or process — such as welding control, computer systems, and numerical control.

Each switch module is only ½-inch wide, 1¾-inches deep and 2-inches high. An assembly with 24 switch modules takes up only 12 13/16-inches in panel width.

The Switch is rated 3-amperes carrry, 150-volt a-c/d-c and is available in standard-duty and oiltight forms. Phenolic printed circuit boards are available in decimal, binary coded decimal, binary with complement, binary with oddbit parity and binary complement forms. Switch assemblies can be factory-assembled with up to 24 modules — up to 7 modules for oiltight forms.

FEATURES

- **True Oiltightness** — both for switch **and** for panel integrity Never before offered in the industry!
- **Ordering Flexibility** — order the switches factory-assemble chase modules as individual units to be mounted and separately. If you want to make up your own Standard-duty you can order end blocks, spacers, shafts, and switch mod choice of termination — plug-in, wire wrap, or taper t Oiltight forms are available factory-assembled only.
- **Appearance Flexibility** — G.E. Thumbwheel Switches offe selection of numeral color combinations. Wheels are also with plus-minus coding. Housings ar offered in grey, bla or beige.
- **Durable Construction** — tough, unbrekable Lexan® switc wear-resistant Delrin* wheel and Fairprene* gaskets (o forms) give this switch maximum operating life with low mai The switch is easy to operate, even with a gloved hand.
- **Easy Mounting and Installation** — entire unit is assembled mounting shafts and eight screws at end of shafts — no m many switches in line. The Assembly is held snug to panel a simple bracket-screw design and can be mounted on a thickness up to ⅜-inch.
- **Neat Appearance** — large, easy-to-read numerals or symbol in-line visual readout of switch position. Modern switc presents clean panel face — no screw heads on outside Spacers with solid front can be inserted to permit easy n symbol series separation.

CR103 TYPE D ILLUMINATED PUSH-BUTTON SWITCHES

Illuminated push button/light with horizontal lens caps installed

Solid or split color fields give added flexibility. Colors can be mixed in the split field forms for even more combinations.

Illuminated magnetically-held push button with vertical lens caps installed

General Electric's new line of CR-103 Type D illuminat buttons are designed for a wide variety of applications control and instrument panels, office machines, la instruments, computers and other data processing eq Matching indicating lights are shown in Section 3900 of General Electric indicating lights.

Push buttons are rated 5 amp carry, 30 amp make at 1 a-c; 3 amp inductive at 30 volts d-c; 0.55 amp inductiv volts d-c. Lamps are rated 28 volts maximum.

FEATURES

- Units snap into panels from front without tools, and can mounted horizontally to save space or for group functions.
- Convenient slide-on lens caps in five colors; four housin Units are single button only, and have solid, horizontally- or split color fields.
- Legend inserts for all forms can be printed or engraved on a similar material of 10 mils or less thickness.
- Three types of contact action are available: momentary con or without audible indication, maintained contact (push-on, and magnetically held contact with or without audible in Terminals are designed for either quick-connect or solder con
- Miniature flange-base incandescent lamps such as GE No. volts) or GE No. 328 (6 volts) are easily replaced witho without removing housing from panel. Lamps are supplied by c
- 2-lamp and 4-lamp forms are available.

Excellence in Rotary Switches

Standard Switches

	Series No.
.500" Dia. O.D.—36°, 45° or 60° angles of throw—1 or 2 poles—1 deck	50
.562" Dia. O.D.—30° angle of throw—1, 2, 3, or 4 poles—1 deck	51
.687" Dia. O.D.—36° angle of throw—1 or 2 poles—1-12 decks	8
.750" Dia. O.D.—30°, 45°, or 60° angles of throw—1-6 poles—1-12 decks	9
1.01" Dia. O.D.—36° angle of throw—1 or 2 poles—1-10 decks	24
1.015" Dia. O.D.—36° angle of throw—1 or 2 poles—1-12 decks	42
1.170" Dia. O.D.—30°, 45°, 60°, or 90° angles of throw—1-6 poles—1-12 decks	44
2.280" Dia. O.D.—30° angle of throw—rated at 15 Amps. at 125 VAC Resistive	19

The above standard switches are available with the following features:

	Series No.
Spring Return—a rotational force is required to maintain contact at one or more switch positions	8, 9, 24, 42 or 44
Isolated Position—one or more switch positions can be isolated from contact by normal rotation of shaft	9, 42 or 44
Printed Circuit Terminals—switch positions have printed circuit terminal for PC board mounting	8, 9, 24, 50 or 51
Concentric Shafts—two switches in one: both rotary; one rotary and one push button; or one rotary and an add-a-pot adapter	43 and 54
Panel Sealed—switches have shaft seals and panel seals to prevent moisture reaching behind panel	8, 9, 42, 44, 50 or 51
Military Type—switches have been tested and meet MIL-S-3786/4, and MIL-S-3786/20	42, 44, 50
Adjustable Stop—switches have stops which can be set and reset for any number of active positions	42, 44, 50 or 51
Keylock—using adapter switches can only be operated with key acting as shaft knob	42 or 44
Coded—switches convert decimal (10) inputs to computer codes	42
Homing Rotor—switch positions are all shorted except one	44
Progressively Shorting—each additional switch position is shorted as shaft is rotated 1 thru 6 positions	44
Unidirectional—switch shafts may be rotated in one direction only	24, 42, 44
Tap—30° angle rated at 15 amps. at 125 VAC resistive	19

Full details are given in the Grayhill Engineering Catalog G-304-A.

* **MEASURED** in a coil of 10,000 turns of #48 AWG magnet wire w length of .76 ±.01 and an ID of .170 maximum.

** **MISS LEVEL** is defined as a contact resistance greater than specifi fo any closure, or failure to open after any closure.

*** **FAILURE** is defined as five (5) or more misses in 100,000 conse iv operations.

**** **MEASURED** in a coil of 10,000 turns of #41 AWG magnet wire v length of 1.03 ±.01 and an ID of .210 maximum.

HEINEMANN

HYDRAULIC-MAGNETIC CIRCUIT BREAKERS

SERIES AM1

SERIES JA

SERIES JL

SERIES JC

n breakers offer almost unlimited integral or fractional ratings from 10 o 100 amp, and in steps to 225 amp; multipole models; breakers for 60 or C, or DC service; breakers that meet); and models with special internal ke relay-trip and calibrating-tap for nctions. Hydraulic-magnetic actuaes that ratings and trip points are l by ambient temperature changes. election of time-delay characteristics lose match of breaker to equipment ents. Request the Heinemann Engiuide (Bulletin 202), or the Condensed 303), or contact your Heinemann ative. Individual product bulletins ow.

E-FRAME: Smaller than other E-Frame breakers, competitively priced. Approx. 5¾h x 2w x 2⅝"d (2-pole). Available in 1 to 4 poles.

SERIES AM1: 1, 2, 3 poles. UL-component-recognized. Special circuits available. Approx. 2.5h x 2.5d, .75w per pole.

SERIES JA: Compact OEM breaker. Only 2.5 oz/pole. 1, 2, or 3 pole. Approx. 2h x 1.875d, .75w per pole.

JA VARIANTS: Series JC (1, 2, 3 poles—single-pole shown) substitutes attractive white or gray rocker handle for standard toggle (Bull. 3381). Single-pole Series JL has pushbutton actuator that lights in both "on" and "off" modes (Bull. 3351). Snap-In Model JB1 installs in rectangular panel cutout without screws (Bull. 3360).

CROWBAR IN A CIRCUIT-BREAKER PACKAGE

SERIES JA/Q

The newest **Heinemann JA/Q™ Electronics Protector** is nearly all-encompassing in its ability to prevent damage to solid-state components. In one standard Series JA package it provides:

- transient/overvoltage crowbar protection, response time 500 nanoseconds;
- electromechanical equipment disconnect (protection for the crowbar) in 10 milliseconds;
- normal overcurrent protection

A thick-film hybrid SCR crowbar microcircuit is packaged into the rear of a Series JA hydraulic-magnetic circuit breaker. A transient or overvoltage on the AC or DC supply line will cause the SCR to fire, placing a dead short across the load to common. The short opens the breaker, removing the equipment from the line. Current ratings 0.020-20 amp DC, 0.020-10 amp AC, firing voltages 4.5-38 volts DC, 28 and 200 peak volts AC. Undervoltage models available. 2h x .75w x 1.8d. Bulletin 3371.

IME-DELAY AND OVERLOAD RELAYS

O-Netic® overload relays: close-tolerance overload protection. Al- carry 100% of rated current, trip as low as 115% of load. Up to 70 Bulletins 5103 and 5104.

O-Netic time-delay relays: dependable, economical, for delays from 120 seconds. Five models: open or enclosed contacts, dust-proof rs, hermetic, or trip-indication. Continuous-duty coils, DPDT con- eliminate slave circuits, reduce equipment costs. Bulletin 5006.

STEPPING MOTORS

Roto-Netic® stepping motors operate on a totally new principle: simple linear force (solenoid-actuated) converted to discrete rotary motion. Starting torque from 1.4 to 25 oz-in. with avg. power consumption less than 12 watts. Eight, ten, or twelve steps per shaft revolution with no cumulative error. Minimum life 10 million steps, typical life 30 million steps. Priced substantially below motors of comparable performance. Bulletin 702.

HEINEMANN ELECTRIC COMPANY 2636 Brunswick Pike, Trenton, N.J. 08602 4685

New BUILDING BLOCK UNITIZED MODULAR PUSH BUTTON SWITCH SERIES C, CL

Completely New and Revolutionary Unitized Construction

A Start with basic momentary switch.
B Add wire staple to convert to push-push action.
C Add release bar unit for interlocking action.
D Add lamp contact unit for illumination.
E Choice of four different snap fit buttons.
F Add blocking discs and pins for blocking action.

STANDARD FEATURES

Disengage plastic lock bar to remove plunger and bridging contacts from front for servicing or replacing, without disturbing position or connections. Solder lugs on top — PC terminals on bottom (2 amp. rating). Two, coil spring load, center pivoting, contact bridges for each PDT.

Non shorting contacts.

OPTIONAL FEATURES

Blocking action—no 2 buttons depressed at the same time.
Shorting contacts.
Timing contacts either leading or lagging.
Gold plated contacts.
Auxiliary solder lug switching contacts on top of switch module (1 amp.).

CONTACT SURFACES

Standard = Hard silver plating .0004 inches.
Special = Silver plated .0004 inches plus hard gold covering .00012 inches.

CONTACT SWITCHING

Standard = Non shorting
Shorting = ks
Leading V
Lagging N

CHASSIS AND STATION DATA

New

SPECIAL LEVER SWITCH SERIES Y

With two independent two or three P.D.T. contacts and three lever positions.

SCHADOW

Type of Contacts

- Standard: Non-shorting.
- ks — Shorting.
- V — Timing contacts, leading.
- N — Timing contacts, lagging.

Contact Arrangements

- 2u — Two independent DPDT.
- 3u — Two independent 3 PDT.

Contact Material

Standard: Fixed terminals .0004". Silver-coated bridging contacts .0004". Solid silver plated.

- 3Au — Additional SELREX with gold plating .00012".

Mounting Facilities

- YA — For twist — tab mounting.
- YB — For screw mounting.
- YC — Multiple sets (standard for screw mounting).
- YD — Flush fitting switch for quick mounting in high impact — 1/8" thick panel plastic case hole size 1.582" x .578".

Level-stop Positions

- 3R — Maintaining Zero, left and right.
- 1R — Zero, momentary left and right.
- 2R — Zero, combination of maintaining one side, momentary other side.

Terminals

- L — Soldering lugs.
- S — PC terminals.

Technical Data

Max. current 1A.
Max. voltage 300V.
Max. rating 100W.
Test voltage 1500V RMS.
Standard insulation resistance 5×10^{11} ohms (after 96 hrs. 70°F. 100% RH).
Contact resistance 10m ohms.

PIANO KEY SWITCHES SERIES KD AND KF

Features: Retains all the advantages of Series D&F switches. Key switch mechanism secures to switch chassis with only 2 screws. Switch terminals may be flow soldered to PC Board prior to assembly. Easy to service since the key can be withdrawn by simply disengaging a catch. The switch contact plungers are then removable from the front without disturbing the remainder of the assembly. Available .689" and .787 centers.

TOP VIEW

MINIATURE MODULAR PUSH BUTTON SWITCH SERIES F

Uniquely designed to improve versatility and serviceability.

Compress return spring and lift out locking staple or plastic bar to remove plunger and bridging contacts from front of switch without disturbing switch position or electrical connections. Replacing the wire staple with a plastic bar converts switch from push-push to momentary action.

Features: Inexpensive. Proven dependability. Modular design. Versatile. Completely enclosed. Up to 10 PDT. Infinite combinations. Solder lugs or PC terminals. Smooth slide action. Largest selection of chassis spacing, button styles and colors. UL and CSA approved 4A 250 VAC power switch. Positive action coil spring loaded bridging contacts. Flat stator contacts. Stand-off molded on bottom to hold switch parallel to PC board.

Available 2, 4, 6, 8 and 10 PDT
Power Switch Available with 2 and 4 PDT Integrated

MINIATURE PUSH BUTTON SWITCH

Series D
Available 2, 4, 6 and 8 PDT
Power Switch Available with 2 and 4 PDT Integrated

Series D&F

Enlarged view showing silver plated bridging contacts with their spring balance for the best contact pressure and durability.

CONTACT MATERIAL:

Fixed contact surfaces silver coated .0002"
Moving contact surfaces silver coated .0004"

TYPES OF CONTACTS AVAILABLE:

SERIES D Solder lugs or PC terminals; top, .197 — PC terminals bottom, .256
SERIES F Solder lugs; top .197 — PC terminals bottom .264
SERIES F PC terminals top .197 — PC terminals bottom .291

SPECIAL TYPES:

- oA = Momentary (spring return).
- Gr = Interlocking.
- Gr_1 Gr_2 = Divided into independent interlocking groups.
- AoR = Operation without latching but releasing interlocking.
- EE = Push to make — push to break.
- NE15/ = Power switch 4A/250VAC DPDT (D Series)
- NE15/F = Power switch 4A/250VAC DPDT (F Series)

OT LAMP SOCKETS AND LENS

288.1 Single round pilot lamp socket uses #288-4 lens.

288.4 Round flat top plastic lens.

188.2 Single round pilot lamp socket uses #184.1.1, #79.2 or #288.4 lens.

184.1 Round flat top glass lens.

79.2 Same as above but convex top. (Both with plated metal ferrule).

389.1 Single square pilot lamp socket uses 388.3 lens.

388.3 Square flat top, plastic lens.

All lens available in red, green, blue, yellow, clear and white.

All lamp sockets require .402" mounting hole. Use Type 5530 lamps as shown in miniature switchboard lamps table below.

LAMP EXTRACTORS
#110 for Type 5530, 5522 & 4622 lamps
#153 for Type 6844 lamps

PANEL LAMP INDICATOR ASSEMBLY MODEL 388

Features:
- Modernistic building block design.
- Removable colored lenses, square or round.
- Up to 10 modules may be locked together into one bank.
- Small space requires only 7/16" x 5" x 1½" (depth) for 10 lamp bank.

STANDARD OPTIONS AND ACCESSORIES

- DIAL STOPS
- DIVISION PLATES
- SPACER PLATES
- BLIND SLAVE MODULES
- DIAL-ONLY MODULES
- MAKE-BEFORE-BREAK CONTACTS
- PROV. FOR ILLUMINATING DIAL
- DECIMAL POINT ON MODULE
- DECIMAL POINT ON SPACER
- DECIMAL POINT ON THUMBWHEEL
- ILLUMINATED DECIMAL POINT
- COLORED THUMBWHEELS
- TRANSLUCENT THUMBWHEELS
- DOUBLE CHARACTERS
- UP TO 7 CHARACTERS/POSITION
- SPECIAL COLORED CHARACTERS
- MATING P. C. CONNECTORS
- COMPATIBLE GLOW-NUMERIC DISPLAY

MATRIX BOARDS

Interswitch Matrix Boards are available in nine standard 2-level models. Larger switching arrays can be readily built up from them. Appropriate nomenclature, symbols, programming stripes, can be applied. Durable multi-color or monochromatic markings can also be engraved or imprinted on the panel.

Three-level and four-level matrix boards are also available, as are special boards with split busses to accept program input at two board edges and deliver outputs from two board edges.

Standard Hole Patterns:
6mm spacing:

10 x 10	10 x 15	15 x 15	15 x 31
20 x 20	25 x 50	31 x 31	50 x 50

3mm spacing: 20 x 20

Terminal Types: solder, wire-wrap, PCB insertion pin.

Working Voltage: 220 VDC or AC RMS.

Current Rating (per contact bar): 6mm: 10A
3mm: 5A

Contact Resistance: 7 milliohms with short-circuit pin installed.

PROGRAMMING ELEMENTS

Standard elements available for use with above Matrix Boards are:

- Shorting Pins
- Plug-In Lamps
- Diode Plugs
- Cable Plugs
- Dummy Plugs
- Programming Templates
- Dual and Triple Shorting Pins

DATA PROGRAMMING MODULES

These are data-input logic elements (programming plug and switch body) for programming by 4-bit binary codes. They are mounted on either a matrix program board or a printed circuit board. Numerals are available in both horizontal and vertical reading orientation.

Codes: BCD 8-4-2-1
Excess 3
Aiken 2-4-2-1
Operating Voltage: 50V maximum.
Operating Current: 500 mA maximum
Rated Thermal Current: 1A
Switching Cycles (min.): 10^4
Contact Resistance: 5mΩ
Test Voltage: 1000V
Colors: Plugs — 7
Inscriptions — 9

DESIGN VERSATILITY SOLVES APPLICATIONS PROBLEM

SPACE-SAVER PUSH-BUTTON ROTARY SWITCH

Series 2800B

This new Push-Button Rotary Switch is available as BI-DIRECTIONAL (Series 2800B) and UNI-DIRECTIONAL (Series 2800U).

SPECIFICATIONS:

- Totally enclosed explosion-proof construction.
- Designed to meet the requirements of MIL-S-22710.
- Printed circuit construction.
- Available in 8, 10, or 12 positions and in all standard codes.
- Electrical rating: make and break .125 amp. res. at 28 VDC and 115 AC .05 amp. ind. at 28 VDC.
- Life characteristics: 50,000 cycles.
- Weight 1 oz. approx.

WRITE FOR COMPLETE TECHNICAL DATA

KEY OPERATED MICRO-MINIATURE ROTARY SWIT

This new Key Operated Micro-Miniature Rotary Switch is available with 30° (7-2511), 36° (1-2543), and 45° (2-2251) indexing. Totally enclosed design provides high security. A variety of lock-safe combinations are available. A single key can operate several switches, allowing one person to control a multiple switch installation. Broad selection of positions, and indexing, affords a flexibility that meets your security switching requirements.

ROTARY SELECTOR SWITCHES BY JANCO

ROTARY SELECTOR SWITCHES MIL-S-6807B / MIL-S-3786B

SERIES 1211

Max. Pos.: 16
Body Dia.: 3"
Electrical Rating:
10 amps 115 v ac Res.
10 amps 28 v dc Res.
6 amps 28 v dc Ind.
Available in single pole per deck construction.
Solder lugs only.

SERIES 1272

Max. Pos.: 16
Body Dia.: 3"
Electrical Rating:
10 amps 115 v ac Res.
10 amps 28 v dc Res.
6 amps 28 v dc Ind.
Available in single pole only per deck construction.
Screw terminals only.

SERIES 1315

Max. Pos.: 12
Body Dia.: 2.180"
Electrical Rating:
5 amps 115 v ac Res.
5 amps 28 v dc Res.
2.5 amps 28 v dc Ind.
Available in 1 and 3 poles per deck construction.

SERIES 1246 36°

Max. Pos.: 10
Body Dia.: 2.375"
Electrical Rating:
6 amps 115 v ac Res.
6 amps 28 v dc Res.
3 amps 28 v dc Ind.
Available in single pole only per deck construction.

SERIES 1262 45°

Max. Pos.: 8
Body Dia.: 1.93"
Electrical Rating:
5 amps 115 v ac Res.
5 amps 28 v dc Res.
2.5 amps 28 v dc Ind.
Available in 1 and 2 poles per deck construction.

SERIES 1244 72°

Max. Pos.: 5
Body Dia.: 2.125"
Electrical Rating:
15 amps 115 v ac Res.
15 amps 28 v dc Res.
10 amps 28 v dc Ind.
Available in single pole only per deck construction.

SERIES 1302 90°

Max. Pos.: 4
Body Dia.: 2.125"
Electrical Rating:
15 amps Ind. 30 v dc
Available in 1 and 2 poles per deck construction.

MODIFICATIONS AVAILABLE

The following modifications can be supplied on any of the basic switches shown on this page.

(1) Shorting or non-shorting contacts
(2) Bridging of contacts (miniature only)
(3) Momentary positions, whereby, the rotor contact, when released, returns to a predetermined position
(4) Isolated or guarded positions, whereby, the knob must be depressed or pulled out to enter or leave a particular position or positions
(5) Single or multi-pole construction
(6) Continuous rotation or the use of stops
(7) The use of a solenoid for remote switching applications
(8) The use of a key-lock feature
(9) The possibility of ganging various switches to be gear driven for an application requiring an unusual number of poles

MINIATURE ROTARY SELECTOR·SWITCHES / 1900 SERIES

SERIES 6-1900

Max. Pos.: 24
Body Dia.: 2"
Electrical Rating:
5 amps 115 v ac Res.
3 amps 28 v dc Res.
2 amps 28 v dc Ind.
Available in 1, 2, 3, 4 and 6 poles per deck construction.

SERIES 12-1900

Max. Pos.: 18
Body Dia.: 2"
Electrical Rating:
5 amps 115 v ac Res.
3 amps 28 v dc Res.
2 amps 28 v dc Ind.
Available in single pole per deck construction.

SERIES 3-1900

Max. Pos.: 16
Body Dia.: 1.5"
Electrical Rating:
5 amps 115 v ac Res.
3 amps 28 v dc Res.
2 amps 28 v dc Ind.
Available in 1, 2 and 4 poles per deck construction.

SERIES 1905

Max. Pos.: 12
Body Dia.: 1.036"
Electrical Rating:
2 amps 115 v ac Res.
1 amp 28 v dc Res.
0.5 amp 28 v dc Ind.
Available in 1, 2, 3, 4 and 6 poles per deck construction.

SERIES 1900 36°

Max. Pos.: 10
Body Dia.: 1.036"
Electrical Rating:
5 amps 115 v ac Res.
3 amps 28 v dc Res.
2 amps 28 v dc Ind.
Available in 1 and 2 poles per deck construction.

SERIES 1906 45°

Max. Pos.: 8
Body Dia.: 1.036"
Electrical Rating:
5 amps 115 v ac Res.
5 amps 28 v dc Res.
2.5 amps 28 v dc Ind.
Available in 1 and 2 poles per deck construction.

SERIES 1-1957 60°

Max. Pos.: 6
Body Dia.: 1.13"
Electrical Rating:
5 amps 115 v ac Res.
3 amps 28 v dc Res.
2 amps 28 v dc Ind.
Available in single pole only per deck construction.

SERIES 1-1966 90°

Max. Pos.: 4
Body Dia.: 1.13"
Electrical Rating:
5 amps 115 v ac Res.
3 amps 28 v dc Res.
2 amps 28 v dc Ind.
Available in single pole only per deck construction.

GENERAL SPECIFICATIONS/1900 series

ELECTRIC RATING: carry 10 amps continuous. Make & Break—see individual switch data

VOLTAGE DROP: 0.1 volt or less at rated amperage. Initial Contact Resistance .003 OHM

LIFE: 10,000 double cycles make and break rated amperage

TORQUE: 1 to 3 inch lbs.

SWITCHES DESIGNED AND BUILT IN ACCORDANCE WITH THE FOLLOWING SPECIFICATIONS:
MIL-S-6807B (rotary switches enclosed)
MIL-S-3786B (rotary switches)
MIL-E-5272C (environmental testing)

MICRO-MINIATURE ROTARY SELECTOR SWITCH / 2500 SERIES

With unitized construction

Available in 30°, 36° and 45° indexing, with 12—10 and 8 pos. max.
Body Diameter: .623 inch.
Electrical rating continuous: 8 amps at 28 v dc.
Switching rate:
0 to 0.25 amp resistive 0 to 28 v dc.
0 to 0.25 amp resistive 0 to 115 v ac.
0 to 0.12 amp inductive 0 to 28 v dc.

Available in 1, 2, and 3 pole construction.
TORQUE: 5 to 9 inch ounces.
CONTACT RESISTANCE: .005 ohms average.
INSULATION RESISTANCE:
100,000 megohms minimum at 100 volts.
10,000 megohms minimum at 500 volts.
DESIGNED AND BUILT to meet the environmental and functional requirements of MIL-S-3786B.

8-3551*

It would take nearly all the pages in this catalog to list all of our surge protectors . . . and it would take more than all of the research shelves in a library to contain all our knowledge about surges and how to protect against them. Obviously, then, two little pages in this catalog probably won't provide the *right* solution for *your* particular surge protection problem. But you can get the right solution by calling us collect. Do it now. We'll give complete, authoritative, courteous help in less time than it takes you to determine whether some catalog listing really does fit your particular situation.

When you can't afford a failure . . .

ROTARY SWITCHES

When it comes to selecting a source for rotary switches, you'll find Wilmington Controls fully equipped to service you in these important areas: (1) quick, competent response to engineering requirements, (2) fast prototype delivery, (3) dependable production scheduling, and (4) consistent quality levels.

Our switch engineering experience dates back to 1947, when rotary switches were first applied with Ledex rotary solenoids to perform remote stepping and complex circuit programming functions. Over the years we have helped many customers to simplify their circuitry, reduce wiring requirements, and cut system costs. This experience we gladly share with you.

1. *Starmate detent:* Two bearing balls are spring loaded to operate against a precision indexing cam. The balls oppose each other with balanced pressure to eliminate side loading and extend switch life. This superior detenting concept is time-proven in Ledex long-life stepping motors.

2. *Ball detent:* A spring loaded ball bearing rides in and out of the "hill and valley" positions in the front plate. The ball detent has a crisp detenting feel even more positive than that of the spring detent.

3. *Spring detent:* a formed stainless steel spring with a coined spherical surface rides in and out of "hill and valley" positions in the front plate. It combines a positive index feel with economy.

Commonly used shaft designs for commercial and military applications. Others made to specifications.

To meet your requirements for rapid deliv service, we stock a wide variety of standard pa which can be quickly modified. Our tooling designed for quick setup and fast change-o to further add to our ability to give you sh delivery cycles. And to assure consistent qual random production samples are regularly sou to automated test instrumentation for vibr life and other quality verification tests.

From the early design stages on through p duction runs we are geared to produce qua switches . . . fast. Whether you're concerned w new switching applications, or investigating sources for existing ones, we welcome the op tunity to work with you.

IDEAS IN SWITCH ENGINEERING

Supplying quality switch hardware is just one phase of our business. We take a special pride in our time-proven ability to simplify circuitry, upgrade the switch, and hold costs down. In most cases we can supply pre-wired assemblies with external components installed for less than it might cost you to purchase parts and assemble them in your plant.

Switch pre-wired with quick connect terminals for simplified installation.

Slotted terminals permit resistors and other com to be inserted in place. They eliminate need for wires, reduce soldering time, keep size down.

Concentric shafts, dual index mechanisms to drive ometers, snap switches and other loads. Special b shields, brackets also engineered to solve unusual environmental problems.

Printed circuit terminals, available for perpendicular allel mounting (to PC board) expand switching ver

SWITCH SECTION HIGHLIGHTS

contact and rotor blade materials

silver plated brass

Most economical. Has .0001″ minimum silver to assure silver-to-silver contact (low contact resistance) throughout life of most application.

silver alloy

Use when consistent low contact resistance is required for minimum life expectancy of 200,000 contact flexures.

gold plated silver alloy

(a) .00003″ minimum gold; an economical way to assure positive solder contacts and prevent tarnish during long storage life.

(b) .0002″ minimum hard gold; assures gold-to-gold contact for over 50,000 contact flexures and then silver-to-silver contact for 150,000 additional contact flexures.

SILVER PROTECTION PROCESS	WHERE APPLIED	COMMENTS
Wear Dip Lacquer	*On Contacts*	*Applied as standard on all silver alloy and silver plated brass contacts to retard tarnishing for soldering ease.*
.0003″ Gold Plate	*a) On Contacts and Rotors*	*An economical means to assure positive circuit make after extended shelf life; also offers soldering ease. Meets MIL specs.*
	b) On Contacts only	*Primarily used for soldering ease after extended shelf life. Meets MIL specs.*
Hot Tin Dip	*On terminal end of contacts only*	*Primarily to assure good contact solderability after extended shelf life. Meets MIL specs.*

STATOR INSULATION GUIDE

STATOR INSULATION	MIL SPEC.	USABLE TEMPERATURE LIMIT (°C)	MINIMUM INSULATION RESISTANCE (MEGOHMS)	
Phenolic	*MIL-P-3115, type PBE-P*	*100*	*1,000*	*Most economical, most commonly used. Though non-nutrient to fungi, varnish impregnation per MIL-V-173 is available. Meets most military and commercial application requirements.*
Epoxy-Glass	*MIL-P-18177, type GEB*	*125*	*10,000*	*Economical, excellent structural and dielectric strength. Lower moisture absorption rate than phenolic.*
Silicone Glass	*MIL-P-997C, type GSG*	*125*	*10,000*	*Good RF characteristics. Lower structural strength than epoxy glass, and slightly higher in cost.*
*Mycalex**	*MIL-I-10A, Grade L-411*	*150*	*10,000*	*Good structural and dielectric strength, lowest moisture absorption.*
Kel-F	*MIL-M-55028-A, Grade 3*	*125*	*20,000*	*Excellent structural and dielectric strength. Low moisture absorption.*
Ceramic	*MIL-I-10A, Grade L-422*	*150*	*10,000*	*Very low dielectric loss and moisture absorption.*

*Mycalex sections supplied with Kel-F rotors.

STEPPING SWITCHES/CIRCUIT SELECTORS

Thirty Six Stock Models
Choose from 36 stock models, 2, 4, 6, 8, 10, 12, 18, 20 and 24 positions; 28 and 100 VDC. "Stepping Switches and Circuit Selector" catalog lists complete specs on stock models plus useful engineering information on basic control switching and application of basics to solve complex problems. Also includes simplified building block approach to specifying pre-engineered stepping switches and circuit selectors.

Ledex Stepping Switches are used for transfer switching, remote control of predetermined circuit patterns, remote sequencing of complex switching arrangements, or in programming checkout and sequential operations. They are known best for their ability to perform multiple switching functions reliably, in limited space, and under severe operating and environmental conditions. Available in open construction, pre-wired modules or as packaged control solutions.

Ledex Hermetically Sealed Swch are engineered to withstand ve shock and vibration, such as e ou tered in aircraft, missile and m ta applications, and to provide dd switching reliability in adver e vironments. Used extensively in er space and underwater guidanc co trols, as mode selectors, in rock ing devices, and in a variety o mi tary control functions that dem nd high degree of reliability.

PACKAGED CONTROL SOLUTIONS

Here are examples of Ledex Stepping Switches designed into compact, reliable armament control packages, either solid state or electromechanical, or combining the best characteristics of both.

Whether your problem involves armament controls or commercial control functions, there's a good chance Ledex has already solved a similar problem.

Miniaturized Armament Control Intervalometer
A flat disc-shaped solenoid is used in the 12-position stepping switch. It is used to fire 19 rockets in pairs sequentially, in speeds ranging from 10 to 20 ms intervals.

40-position Intervalometer with single or optional 5-speed ripple fire control
40-position intervalometer has 5 adjustable control speeds for rocket firing at intervals of 100, 200, 300, 400 or 500 milliseconds. Hybrid design combines best characteristics of solid state and electromechanical products for optimum performance, minimum weight, maximum reliability and lowest cost. Firing time intervals are maintained at ±5% through a voltage range of 22 to 31 vdc.

Universal Stores Dispenser Intervals Variable on Digital Ba s

All solid state and among the os flexible of Ledex intervalometer de signs, this one permits the pilo to vary release intervals to any ate ranging from 30 ms to 9.99 sec ds in increments of 10 ms. It includ a stepping switch to distribute seq n tial fire commands. Timing toler ce is ±10% over a voltage range o 22 to 32 volts and temperature to —5°C to +85°C. The package includes b lt-in suppression to protect solid st te circuitry when switching indu ve loads.

Would you rather light...or switch?

Marco-Oak has them both.

Either way, your single source of supply is Marco-Oak, manufacturers of indicator lights and illuminated pushbutton switches featuring quality, reliability, and service for over 20 years and the original designers and patent holders of the indicator-light Press-to-Test feature.

Say you're looking for a comprehensive selection of indicator lights to create an information display second-to-none. Look to Marco-Oak. We offer lights with many lens colors, body sizes, and shapes.

And if you want illuminated pushbutton switches with long life, crisp appearance, and vital design features, choose Marco-Oak Presslites. Available in a multitude of styles and mountings.

And, of course, Marco-Oak Presslites and indicator lights are easy-to-install, and, if required, are protected against severe operating conditions and shielded against EMI/RFI transients.

Something special on your mind? We're ready for that, too. Tell us your application and we'll work up a custom design.

Now's the time to write for our *Presslite* catalog or our *Indicator Light* catalog—or both.

PUSHBUTTON SWITCHES →

light series combines the Licon Type 16 Double- ch with a lamp assembly and removable lens ning lighting and switching functions in one ckage, conserves panel space and cuts installa- The 01 series is designed to meet the require- IL-S-22885-27, and provides up to 10 Amp switching r commercial use. The series includes four different stationary lamp base styles, a wide choice of lens cap sizes, shapes and colors, servicing without tools from front of panel and a choice of projected color or colored lens illumination. Available in momentary alternate action, solenoid held and indicator versions.

-700

momentary al- indicator action stationary bulb ce molded hous- drical, square or s caps. Front-of- b servicing.

TYPE 01-800

Styled for maximum in function/appearance criteria. Has integral plastic housing that snaps in from front panel. Available in one thru six pole, momentary and alternate action.

← TYPE 02-800

For two-light, two-circuit, split-screen indication and the same fine appearance as the 01-800, this series features snap-on switch modules containing sub-miniature Type 16 double break switches. Gives the designer that much more switching flexibility. With all the same wide range of features to meet your specific application. This series combines nicely with 01-800 series for display versatility.

4-590

panel appearance bulb illumination. snap-on switch front-of-panel bulb Standard in black anodizing.

— TYPE 01-600 LIGHTED PUSHBUTTON SWITCHES

An attractive new snap-in one light switch offering bezel, single barrier, or double barrier housing. Employs the 01-748 series basic unit and mounts in a .875″ square panel cutout, panel thickness 1/16-1/8″. Momentary, alterate & indicator versions available.

INDUSTRIAL SWITCHES

TYPE 30

Rugged diecast endorsed limit switch for industrial applications. Available in wide variety of actuators, sealed or unsealed. U.L. Listed

30-100 OVERTRAVEL PLUNGER SWITCH

General purpose limit or push button switch for circuit controls of heavy duty applications. The overtravel plunger provides added switch protection and also permits greater flexibility of application. Since these switches are not sealed, it is recommended they be used for applications where environment is not a troublesome factor.

Uses Basic Switch 10-322

Operating Force	10 oz. ±4 oz
Release Force	3 oz. min.
Pretravel	.030 max.
Overtravel	.219 min.
Movement Differential	.002 max.

30-300 ROLLER ARM SWITCH

Identical to the dependable performance of the 30-400 switch. These switches are not sealed, however, and must be used in applications where environment is not a factor. Excellent for both slow and fast moving cams and slides. It is horizontally adjusted, in the field, to accept actuation from eight positions. It is vertically set for desired actuating thru 225°.

Uses Basic Switch 10-322

Operating Force	10-18 oz.
Release Force	6 oz. min.
Pretravel	.141 max.
Overtravel	.219 min.
Movement Differential	.006 max.

AIRCRAFT TOGGLE SWITCHES

TYPE 51

Heavy duty sealed toggle switch designed to meet the requirements of MIL-S-3950, MS24523, MS24524 and MS24525. 1, 2, and 4 pole versions. Also available: Lift lock versions. MS24658, 59, 60 and solder terminal MS27734, 35, 36.

SEALED SWITCHES

TYPE 63

Environment free sealed limit switch. Meets MIL-S-8805.

TYPE 65

Subminiature environment free snap-action switching.

TYPE 70-700 PROXIMITY SWITCH

The 70-700 consists of two basic modules, a control module and a remote potted sensor. The control module contains a 10 amp relay and a transistor oscillator, both housing in a plastic plug-in case which mates with a 12 terminal heavy duty JIC style socket (supplied). A NEMA Class 1 metal enclosure is also available for housing both the control module and heavy duty socket.

MSC Master Specialties Company

For more than a quarter of a century, Master Specialties Company has specialized in the development and production of warning and display systems, word indicator lights, and illuminated pushbutton switches. Today, the company produces a broad line of information display and control devices for the nation's military and space programs and for commercial aviation, industrial process control, public utilities and commercial equipment of all types.

Series 800 Square Tellite® Switch

Miniature pushbutton switch with modular design and outstanding plug-in features. Reduces wiring installation time by 71% while increasing reliability. Available in standard matrices containing up to 144 channels.

Miniature Tellite® Series 90E S tch, Series 90K Pilot Lite

Companion pushbutton switches and ind ors with matching panel cutout and front-o nel appearance. Flush mount design, with p ive hard mount from front of panel. Provide oad capabilities in minimum space. Half the s of equivalent competitive units. Provide tw m reliability, or separate lighted indication one unit.

Comparative design and performance characteristics

This tabulation of outstanding characteristics permits you to select quickly and easily the MSC product most suitable to your requirement. Once you have made your choice, we invite you to write for complete catalog information. Or, if you prefer, contact the nearest regional sales office or distributor where you will receive prompt attention to your request.

Characteristics	Series 800 Square Tellite® Switch	Series 90E Switch	Series 90K Pilot L
Basic Unit Types Available	Indicator Lite, Switch Lite, Switch Lite with Holding Coil	Switch Lite, Switch Lite with Holding Coil	Pilot L
Switch Configurations and Actions	2PDT or 4PDT, momentary or alternate action	2PDT or 4PDT, momentary or alternate action	N.A
Overall Unit Size, H x W x L	.750" x .750" x 3-1/8" max.	1.000" x .750" x 3.093"(max)	1.000" x .750" x .20"
Lamp Type / Number of Lamps / Voltage	Four T-1-3/4 incandescent 6, 12, or 28 volt based lamps (115 VAC neon lamps available)	Two T-1-3/4 incandescent 6, 12, or 28 v based lamps (115 VAC neon lamps ava le)	
Lamp Circuits Available	Common ground, vertical or horizontal split	Common ground	
Wiring Terminations	Crimp type (soldering possible)	Solder type only	Solder-lug type rew connector type
Switch Contact Ratings	5 amps resistive @ 115 to 250 VAC, 5 amps resistive, 2.5 amps inductive @ 30 VDC	3-Amps resistive, 1-1/2-Amps inductive, 1-Amp lamp load	N.A.
Relamping	Front of panel without tools	Front of panel without tools	
Display Screen Arrangements	Full display, vertical or horizontal split display, 3 and 4-way split display	Full display, 2-way horizontal or vertical split, two-color	
Color Control Method	Silicone rubber slab filters in amber, blue, green, red, white. Projected color also available	Silicone rubber slab filter in amber, blue, gree d a white. Projected color also available.

Mounting Method	Units plug and lock into pre-fabricated mounted racks	Hard mount from front of panel wi integral mounting sleeves	
Unit Weight, Nominal	1 oz. (module); .7 oz. (mounting rack)	2 oz.	1-1/4 o
Optional Features Available	RFI screens, two-color full display, panel plugs	RFI Screen, drip-proof seal, spacer barriers, sw gu (connector block available for 90K indicator).	
Price, Basic Unit with 2-Pole Momentary Switch, 500 Pieces	$12.25	$6.30	$1.90

OTHER MSC INFORMATION DISPLAY AND CONTROL DEVICES

Series 100/1100 Roto-Tellite®

Flush mounted model available with two standard lens sizes (narrow 100, wider 1100) and a wide variety of matrix configurations. Ideal when application calls for rugged, dependable performance in environmental extremes.

Series 6000/7000 Roto-Tellite®

Available in two sizes, the narrow 6000 and wider 7000 — mounts flush with front panel. Small size, low cost, high quality features are ideal for cockpit applications and numerous industrial, commercial and military requirements.

Series 4000/5000 Tellite®

Push-to-relamp indicator offered in two sizes, the Series 4000 and the larger Series 5000. Both are ideal for numerous industrial, commercial and military applications. Relamping accomplished simply by depressing display face then pulling face forward on captive runners.

Price, Basic Unit with 2-Pole Momentary Switch, 500 Pieces	$7.74 (Series 100) $8.82 (Series 1100)	$3.90 (both Series)	$4.28 (both Series)

UNLIGHTED SWITCH ASSEMBLIES

Series 14. 2PDT or 4PDT unit with momentary or alternate action. Positive snap-action design assures instantaneous contact transfer. Also available for MIL-S-8805 applications as Series 14H. **Series 19.** Building block pushbutton switch. Removable color pushbuttons, facing nuts and switch modules provide design flexibility. **Series 16.** Precision two position toggle switch assembly. 2PDT or 4PDT maintained/maintained. Simultaneous transfer of all switch contacts. Also available for MIL-S-8805 applications as Series 16H. **Series 21.** three position toggle switch with three separate lever actions for positive contact transfer. **Series 22.** Precision sequence actuator. Programs four miniature SPDT switch modules for any combination of switching modes in up to twelve sequential steps.

MATRIX SYSTEMS CORPORATION

9201 Gazette St., Chatsworth, Calif. 91311 • 213-88-20

MATRIX 7000 SERIES • COAXIAL RELAY MODULES

MATRIX CONFIGURATION

MATRIX 7000 Series Relay Modules are designed to maintain coaxial switching continu ovi a wide range of critical and high environmental applications. The relay housings a co structed of precision machined aluminum alloy for structural integrity and hard anodi d f durability. All signal shield paths are silver plated with covers gasketed for maximum E pr tection. The basic reed switch elements are hermetically sealed in nitrogen filled gas en lope and employ rhodium plated contacts to insure non-stick operation.

FEATURES

- Continuous shield continuity
- Rugged machined aluminum housing
- Crosstalk always less than isolation
- Switchpoints individually field replaceable
- Extremely low EMI
- Low VSWR
- Matrix configuration easily assembled using 9000 series cross straps
- Signal circuits isolated from control circuitry

SPECIFICATIONS

FREQUENCY RANGE:	0 - 300 MHz
CHARACTERISTIC IMPEDANCE:	50 ohms, std; 75 ohms, optional
SWITCHING CONFIGURATION:	Single pole, two thru twenty throws
SWITCHING SPEED:	Less than one millisecond
CONTROL-CONNECTOR:	28 Vdc, 30 ma Amphenol MiniRac 17 Series
SIGNAL CONNECTOR:	BNC - UG 1094/U, TNC optional
OPERATING TEMPERATURE AND HUMIDITY RANGE:	−30°F to +150°F, 0 to 98 percent R.H.
OPERATING SHOCK AND VIBRATION:	50 G's - 1 ms, 2 G's p-p 20-2000 Hz
DIMENSIONS:	.625″ W x 3.25″ H x 1.75″ L + 625″ x number of t ws
MOUNTING:	Three 6-32 tapped holes in base

	7100	7200	7300	7400	7500	7600	7 0
CONTACT RATING:	100 Vdc .250 amp 10 W	28 Vdc .250 amp 3 W	100 Vdc .250 amp 10 W	28 Vdc .250 amp 3 W	400 Vdc 1 amp 15 W	28 Vdc .250 amp 3 W	10(dc .25(mp 1 W
CONTACT RESISTANT:	.150 ohm	.300 ohm	.300 ohm	.300 ohm	.060 ohm	.300 ohm	.05 hm
ISOLATION: (@ 100MHz)	46 dB	50 dB	66 dB	106 dB	44 dB (10MHz)	106 dB	5 B

Matrix and hybrid switching systems are easily constructed by using Series 9000 (no output), 9100 (one output) or 9200 (two output) push-on cross straps which mate with the BNC connectors on the switch modules. The cross strap output connectors are BNC female type UG 1094/U. The model number of the cross strap is as gne by replacing the two zeros of the series number with the n be of inputs desired. For example, a Model 9108 has eight inpu an one output.

7100 — STANDARD
7200 — SELF-TERMINATING
7300 — HIGH ISOLATION
7400 — HIGHEST ISOLATION
7500 — HIGH POWER
7600 — HIGHEST ISOLATION SELF-TERMINATING
7700 — MERCURY WETTED CONTACTS

MODEL NUMBER ASSIGNMENT

7X XX — X

Series

Number of throws

Coil suppression diodes.....D
TNC connectors.....T
Self-terminating resistance.....ms
Insulated shield.....I
Insulated and switched shield....IS
Expander output.....E

Any of the above options may be comb d.

MATRIX MODEL 6048 • WIDE BANDWIDTH RF RELAY MATRIX

MATRIX Model 6048 offers exceptionally low return loss in a compact 8x8 MATRIX configu ion Each switchpoint may be actuated individually or simultaneously. Any output may be con cte to any input with return loss virtually independent of the path selected. A unique reed itc arrangement with a high degree of shielding continuity affords high open circuit isolation ve at VHF with negligible crosstalk. Applications for Model 6048 include VHF and IF swi hin where high isolation and return loss are required and pulse circuits or baseband video her pulse fidelity requirements demand extremely low phase distortion.

FEATURES

- Switchpoints individually field replaceable
- Rugged machined aluminum housing
- Crosstalk always less than isolation
- Control lines independently connected
- Bi-directional operation without specification degradation
- 8 by 8 switching configuration

SPECIFICATIONS

FREQUENCY RANGE:	0 - 300 MHz
CHARACTERISTIC IMPEDANCE:	75 ohms, std; 50 ohms, optional
OPEN CIRCUIT ISOLATION:	−90 dB @ 90 MHz
RETURN LOSS:	28 dB @ 90 MHz (1.08 VSWR)
SWITCHING CONFIGURATION:	8 input by 8 output (Any input may be switched to any output)
CONTACT RATING:	100 Vdc/0.25 amperes—10 Watts/Switchpoint max um
SWITCHING SPEED:	Less than one millisecond
SWITCHING CONNECTOR:	Amphenol subminax Type 27-15 — mates with Amphenol Type 27-13
SWITCHPOINT CONTROL:	17-32 VDC @ 1000 ohms
CONTROL CONNECTORS:	Amphenol MinRac 17 series
OPERATING TEMPERATURE RANGE:	−30°F to +150°F
OPERATING HUMIDITY RANGE:	0 to 98% R.H.
OPERATING VIBRATION RANGE:	2 Gs p-p. 20-2000 Hz
OPERATING SHOCK:	50 Gs - 1 millisecond
DIMENSIONS — OVERALL:	4.5″ x 4.5″ x 3.5″ high
MOUNTING:	Four 6-32 tapped holes

Latching and XY selection logic available for all models.

Nanasi CUSTOM PRECISION SWITCHES

LEVER ▪ PUSH BUTTON ▪ PUSH-TO-TALK ▪ MICRO ▪ ROTARY

TELEPHONE and ELECTRONIC SWITCHES

made to order for the specific application—made to order for the rigid budget

Nanasi customers include many of the most prominent manufacturers of telephone and electronic systems. From their revolutionary new designs to the everyday bread-and-butter types, they rely heavily on our unique capabilities for rapid turn-around and high output production for custom precision switches. Any configuration, any size, any complexity—Nanasi can respond quickly with a prototype or a million run to keep pace with prescribed schedules. The happy results are job fitted switches to meet all applicable MIL specs or commercial requirements—at off-the-shelf speed and economy.

Typical samplings are shown here of Nanasi custom made lever, push button, push-to-talk, micro and rotary switches. They represent many refinements contributed by our own specialist technology...every part meticulously fabricated and assembled like a fine watch...and each switch tested like the entire system depended on it. If you want reliability to the nth degree–try Nanasi.

DIVISION OF ELECTROSPACE CORPORATION

6308 Jackson St. ▪ West New York, N. J. 07093

Tel: 212-564-0948 (N. Y.) *201-868-9100 (N. J. direct)*

BUILT SWITCHES ▪ PRECISION MECHANICAL ASSEMBLIES ▪ TELEPHONE SYSTEM MODULES ▪ SPECIALIZED JOB & MEASURING TOOLS

No one does more switching and connecting than the telephone industry.

Ever wonder why they almost always specify "electro-mechanical" equipment?

The answer is simple: Telephone-type components offer virtually total reliability at a fraction of the cost. And North Electric offers the finest line of telephone-type components available.

North Electric multi-purpose, multi-contact connectors are both rugged and reliable. Unique tortion blade design assures positive contact. Perfect for rack and fixture cabling. You can order Standard 40, 60, 80 and 100-pin assemblies with metal covers from stock . . . or North's versatile 300-pin Program Plug, designed for interconnection of pre-wired logic, programs or systems.

SPECIFICATIONS:

Dielectric Strength—Measured between conducting parts and frame, breakdown to voltage is in excess of 2000 volts R.M.S. when measured for one minute at sea level.

Contact Resistance—Measured between soldering points, average resistance is 14 milliohms (silver) 7 milliohms (gold), measured with an open circuit voltage of .100 volts and a short circuit current of .100 amperes D.C.

Contact Rating—The current rate is three (3) amperes. When several adjacent contacts are required to carry the same maximum load, current rating should be reduced two (2) amperes per contact.

Mechanical Life—Standard connector unit withstands 4000 plug-in operations with negligible mechanical wear.

Finish—Where practical, zinc plate, chromate treated to MIL-F-14072, is used to ensure maximum resistance to corrosion.

Contact Pressure—250 grams (average).

Retention Force—50 grams per individual contact (approx.).

Terminals—Available with solder to taper tab terminals in mill-tinned Nickel Silver or Gold Plated Nickel Silver.

North Electric manufactures 600 point and 1200 point crossbar switches which provide today's most economical approach to maximum range switching. The North Standard Crossbar Switch features telephone-type reliability and your cost is less than 35 cents per contact. These modular components can be ganged or configured in a matrix for special applications, including pre-wiring (if ordered in quantity). Standard 24, 48 and 100 VDC operating voltages. Exceeds 1200 VRMS breakdown to frame or between contacts. Bifurcated springs with silver or gold contacts. Up to ten Form A contacts at each crosspoint. Contact life in excess of 50 million operations. North's famous crossbar switch is ideal for applications in:

- Digital switching with solid state control of crossbar switches
- Data and storage and reduction
- Memory device programming and sequencing
- Digital to analog conversion
- Automatic DC test programming
- Machine tool control and programming
- Voice and broadband communications switching

SPECIFICATIONS:

Size—1200 point crossbar switch measures 1067 cubic inches. **length** 23 inches. **height** 8.674 inches. **width** 5.350 inches. **weight** 29 lbs.

600 point crossbar switch is 14.3 inches long. **width** 5.350 inches. **height** 8.674 inches. **weight** 18 lbs.

Contact Rating—Bank contacts are bifurcated silver or gold which with adequate spark protection, are rated at 100 MA at 48 VDC or 110 VAC. They will provide a life in excess of 50 x 10^6 operations. Off normal contacts are bifurcated silver, rated at 0.4 amperes at 48 VDC or 110 VAC with proper contact protection.

Contact Resistance—Resistance of typical path is less than 50 milliohms for silver or gold contacts.

Mechanical Life—Greater than 25 million on each of the select units, and in excess of 10 million on each hold armature.

Terminals—Can accommodate 2 No. A.W.G. or. 4 No. 24 A.W.G. on spring sets and 4 No. 24 A.W.G. on off-normal. Terminals will also accept AMP Faston No. 110 connector or equivalent.

Timing—Typical operate and release times.

operate of select bar	—15 MS
delay required for damping	—15 MS
operate of hold bar	—15 MS
total operate time is	—45 MS
release time of select bar is	— 8 MS

delay time required before operation of new cycle is 30 MS, therefore, a complete typical cycle time is approximately 83 MS.

Dielectric Strength—Form A contacts 1200 V RMS conductor to frame and between conductors.

Form B and C contacts 1000 V RMS conductor to frame and between conductors.

Measured for one minute at sea level.

Coil Data—Select and hold magnet coils are available for operation on 24, 48 and 100 volts D.C. Hold magnets require approximately 12 watts to operate and 1.5 watts per coil to hold.

North engineering has developed a R ary Stepping Switch that has virtually eli nat wear-out. New, longer wearing prec s metal parts and bifurcated contact w r blades minimize wear and adjustmer problems. You can expect a minimu of 30 million operations.

Should service ever be necessary, rota assembly is removable by hand (no to s necessary). Choice of 2, 4 or 6 levels 30 points per level with single wiper 4, 8 or 12 levels, 15 points per level with ubl wiper. All coil resistances available. on-bridging contacts rated at 1 amp at re .2 amp non-inductive load when step g. Gold or silver contacts, solder or tape ab terminals. Off-normal contacts and s pin mechanism are enclosed for environm tal protection. Contact Position Indicat at both front and rear of switch. The pe ect switch for wire and circuit testing, sca ing communications switching, programm g and numerical control sequencing.

SPECIFICATIONS:

Dielectric Strength—Measured for one minute sea level between conducting parts and ground frame breakdown voltage is in excess of 750 v R.M.S.

Contact Resistance—Measured between termin with a short circuit current of 1 amp and open cuit voltage of 6 volts is less than 50 milliohms

Contact Rating—standard—silver plated bank c tacts with nickel silver wipers, rated one amp a rest; .05 amp non-inductive load when stepping .05 inductive load with adequate spark suppres n. **optional**—gold plated bank contacts and wipers which should be specified for low level switchi **Off**—normal contacts—bifurcated springs with g alloy contacts rated at .4 amp non-inductive. **interrupter contacts**—(Form B only) tungsten c tacts rated at 2.5 amps non-inductive.

Mechanical Life—Is greater than 3 million opera tions between lubrication and maintenance per s.

Finish—Where practical, zinc plate, chromate treated to MIL-F-14072, is used to ensure maxi mum resistance to corrosion.

As is true with all North components, ou get maximum performance at minimu cos Write or call North for complete data engineering assistance on Relays, Switc s, Connectors, Magnetic Components, Cus m Engineered and Standard Power Conve on Systems. Call direct **419/468-8279.**

NAP ACTION - PRECISION SWITCHES

T ROLLER LEVER A-25LR6-1

sir r to A-25LR5. The actuator is rte r more compact design and faster ea lity.

RIGID LEVER A-25L2-1

a low operating force and long el. A return spring dampens the f vibration.

ROLLER LEVER A-25LR5-1

gned for operations requiring rolling t with the actuating means, as well ng overtravel and low operating . A return spring is provided to n the effect of vibration.

PIN PLUNGER A-2

signed for applications involving limit- notion and very accurate operating cteristics.

The Basic Switches are a precision snap-acting mechanism enclosed in an accurately molded plastic case. Switches are carefully manufactured and quality tested to exacting tolerances. They are known for their compactness, light-weight, excellent repeatability, long life and sensitivity. Precision Switch offers a complete selection of standard size basic switches for general and special applications with a wide choice of circuitry, terminals, electrical ratings, actuators and operating characteristics.

Featuring closely held tolerances between cover and case, molded terminals, enclosed mounting holes and moisture resisting plastics all protect the Precision Switching Mechanism. Sealed Switches can be provided for applications where switches are exposed to excessive moisture, oil and dust conditions. Contact our Engineering Department for special configurations to meet your special requirements.

ALL (6) SWITCHES HERE ARE UL + CSA LISTED @ 15 AMPS, 125, 250 or 480 VAC.

FLEXIBLE LEAF WITH SIDE FACING TERMINALS A-2L-4

permits lower operating forces and greater actuating movement than plunger actuated switches. Overtravel is limited to 1/16".

FLEXIBLE LEAF A-2L

permits low operating forces and greater actuating movement than plunger actuated switches. Overtravel is limited to 1/16".

Precision Switch Corporation

181 Westchester Avenue, Port Chester, New York 10573 • Tel: 914-937-5247

OAK'S TINY .300" DIAM. TEN POSITION SWITCH

. . . this microminiature performs like a giant, at 23,000 G's with vibration conforming to MIL-S-3786.

SUBMINIATURE ½" SWITCH

. . . also provides superior insulation and dimensional stability—even under severe environments, where small size is essential.

AND THE 1" ACORN SWITCH

. . . an engineered combination of molded diallyl phthalate stators and Oak's exclusive Unidex™ indexing.

MULTIDEX® ROTARIE

. . . these universal rotary switches will put a lot of th older and bigger ones out of business. They're smalle more economical and still offer all of the features an options of expensive custom-made OEM switche What's more, they cut engineering design expenses.

MOLDED PB'S

. . . designed especially for compute with fast response, short stroke, ligh touch. High reliability, optiona actions, individual lighting option pre-wired assemblies.

ECONO-LINE™ PUSHBUTTON

. . . less than 25¢ a button for most applications. More switching and contacts in less space. Direct pane mounting; rugged "U" shaped frame.

HEAVY-DUTY SWITCHES

. . . U.L. approved. For appliances, air conditioners, ranges, medical and lab equipment, ovens, etc. Three-wire or two, up to 35 amps., 240 volts and 250°F. Many positions, SP or DP.

NEW LEVER SWITCH

Oak's #184 lever switch gives you versatile miniaturization, with molded diallyl phthalate stator for improved dielectric properties and more clips. Many options available.

Oak Engineered Custom OEM Switches

Oak offers you the broadest line of custom OEM switches available . . . engineered to give you the best switch that can be assembled to meet your design problems. Here are the customized variables—tailored to your needs: Insulations include phenolic, silicone-glass, ceramic, Mycalex, Kel-F and diallyl phthalate. Temperature ranges from Standard Commercial (−25° to +85°C.) to Military (−65° to +85°C.) Contacts are Oak-pioneered double-wiping to provide self-cleaning, long life. Five choices fit each application best, shorting and non-shorting, rated from 10,000 to 200,000 cycles. Finishes are Standard Commercial, 50- or 200-hour salt spray. Electrically, these switches break 1 amp. @ 28 vdc or 0.5 amp. @ 110 vac.

OAK HAS MORE SWITCHES THAT MEET MIL-S-3786 (latest issue) THAN ALL OTHERS COMBINED

WIDE SELECTION AVAILABLE

SUBMINIATURE TO **EXTRA HEAVY-DUTY**

for use where space and weight of components are prime importance such as aerospace use. Small, but gged and dependable at only 3.8 oz. weight. (as own)

. . . produces high torque capable of driving standard switch sections (stepping switches) plus other external loads. Available in foot or flange mounting.

Oak Rotary Solenoids and Stepping Switches

Compact, rugged, reliable for remote actuation

Oak Solenoids are compact and lightweight as compared to the high actuating torques and flexibility they provide for remote switching. Virtually solid metal, their low residual flux means fast response and most efficient conversion of electrical to mechanical energy. Armature is supported by three ball bearings in inclined races to provide stable mechanical balance. Thus axial thrust from the energized solenoid coil is converted into rotary thrust with negligible friction.

Typical uses: master-slave circuits, sequential timing circuits, counting applications.

Our engineers will help you design them into missiles, satellites, machine tools, scoreboards, computers, communications equipment and many other applications. Hermetically-sealed assemblies made to order for service in extremely adverse environments.

SUB-ASSEMBLY SERVICE . . .
time-saving, money-saving

Ease the load on your production facilities by letting Oak fabricate your rotary solenoid and switch subassemblies. These can be completely mounted and/or pre-wired. Components or leads can be added, plugs and sockets incorporated . . . all to your specs. These package units simplify assembly and maintenance. Let Oak engineers smooth out your production operations and save you time and money at the same time.

Immediate action

Oak distributors stock the broadest switch line available. Hundreds of rotary, pushbutton, lever and slide switches! All immediately available from your closest Oak distributor. Every switch has Oak-pioneered double-wiping contacts—self-cleaning, longer lasting; brass, silver-plated with additional gold plating. Widest choice of insulations. Electrical rating: break 1 amp. at 28 vdc, or 0.5 amp. at 110 vac, resistive; carry 5 amps; slide switches rated 3 amps. Write for catalog for complete information, then get your choice fast from your Oak Distributor.

RCL *miniature rotary switches*

ERIES "F" 10-POSITION SWITCHES

½" MAXIMUM DIAMETER

This new subminiature rotary switch has been designed to offer the features of larger switches in a fraction of the space formerly required.

SPECIFICATIONS:

Contact Resistance: 10 milliohms maximum initial.

Insulation Resistance: 50,000 megohms initial; 10,000 megohms min. between mutually insulated parts.

Voltage Breakdown: 600 VAC min. between mutually insulated parts.

Electrical Rating: Will make and break 50 milliamperes: 115 VAC for 25,000 cycles or 200 milliamperes 115 VAC for 10,000 cycles.

Contacts: Shorting or non-shorting contacts.

Deck and Terminal Arrangement: Available only in one deck with terminals projecting from rear of switch.

Shaft Length, Flat and Orientation: Available in accordance with individual requirements.

Materials and Finishes: In accordance with applicable MIL specs.

Contact Terminals: Solid silver alloy gold plated. Will accept Two #22 AWG wires.

Common: Terminal brass gold plated.

Wipers: Solid silver alloy.

Environmental requirements: Meets or exceeds MIL-S-3786-C. Explosion proof per paragraph 4.8.12 of MIL-S-3786C.

DUCT NOTE

NOW AVAILABLE

SERIES "G" 6-POSITION SWITCHES

ns are the same as RCL's "F" series, but with 60° throw orting only. Up to 1 pole-6 position, or 2 pole-3 position.

e with standard solder lugs or printed circuit terminals.

ERIES "F" SWITCH WITH PRINTED CIRCUIT TERMINALS

IDEAL FOR PRINTED CIRCUIT MOUNTING

- **P.C. CONTACT TERMINAL .020 (±.001) WIDE x .020 (±.001) THICK.**
- **SINGLE POLE P.C. COMMON TERMINAL .035 ±.001 DIA.**
- **BASIC CONTACT CIRCLE .340 DIA. ±.005.**
- **BASIC COMMON CIRCLE .190 DIA. ±.005 (for multi-pole).**

△ **Shortened bushing and shaft stick out for low profile printed circuit board mounting as shown is standard. This will be automatically supplied when "PCA" is specified.**

△ **All terminals will remain uncut regardless of switch positions ordered, to facilitate firm anchoring to P.C. board.**

"OFF-THE-SHELF DELIVERY"

ELECTRICAL FEATURES

1. Initial contact resistance — .010Ω max.
2. Current carrying capacity — 5.5 amps.
3. Current breaking capacities
   ¼ amp — 115 V.A.C. resistive
   ¼ amp — 28 V.D.C. resistive
   ⅛ amp — 28 V.D.C. inductive.
4. Dielectric strength (voltage breakdown) —
   a. between any two adjacent positions — 800 v RMs (60 cycles).
   b. between any active position to ground 1500 V (60 cycles).
5. Insulation resistance (measured at 25°C, 50% RH at sea level) — 10^5 megohms.
6. Thermal EMF — 1 microvolt/°C maximum.
7. Capacitance — between adjacent active contacts .5 MMFD Max.
8. Capacitance — between contact and common terminal .9 PFD Max.

MECHANICAL FEATURES

1. Life expectancy — 200,000 mechanical operations.
2. Detent — positive stainless steel roller-type detent snaps from position to position. Detent housing made of special high-strength plastic, providing positive action and minimal wear.
3. Stop strength — Designed to withstand 10 inch-lbs. rotational force.
4. "Molded in" terminals give exceptional terminal strength.
5. Terminal locations clearly marked on rear cover plate.
6. "Wrap-around" turret-type solder lugs are integral with individual contacts.
7. On any one deck of a multi-pole switch, a variety of combinations of shorting (MBB) and non-shorting (BBM) actions may be obtained.
8. Materials and finishes:
   Rotor — Lexan
   Rotor blade — Beryllium copper (gold plated)
   Contacts & solder terminals — solid silver alloy
   Housing — Diallyl Phthalate
   Stator — Diallyl Phthalate
   Shaft — stainless steel
   All brass parts nickel plated
9. One piece contact terminal construction has holes large enough to accept two #22 AWG wires.
10. Shaft and panel seal may be specified by using prefix "S" before switch type numbers.
11. Explosion proof per paragraph 4, p. 12 of MIL-S-3786C.

dering KB series specify whether "flat base" or "slant base" is desired.

Illumination is not evenly dispersed over entire key top due to length. If full illumination is required on BM, HM, and JJ, auxiliary external lamps would be required.

der non-illuminated switches, indicators and key tops, use applicable of the above ordering pattern. For example: KB-01-GM-01. (Non-illum- Series) KB; .75" x .75" x .50" key top.

STACKPOLE ROTARY SWITCHES

SPECIALLY DESIGNED TO GUARD AGAINST EXPOSURE—CONTACT CONTAMINATION—PRODUCTION DAMAGE

-FEATURES-

COMPLETELY ENCLOSED — Both index mechanism and electrical sections are completely enclosed, providing an environment proof assembly.

EXPOSURE AND CONTAMINATION PROOF — Corrosive atmospheres, dust, dirt and moisture are permanently sealed out, while lubricants are sealed in.

PRODUCTION DAMAGE ELIMINATED — Solder and flux cannot get into vital switch parts. Rugged integral terminals and contacts are permanently molded in position and will not loosen or move even under extreme soldering heat. Accidental production damage is eliminated.

FIELD PERFORMANCE ASSURED — Switch assemblies are torsionally rigid and rugged to withstand rough usage. Field tampering is abolished.

UNIQUE MODE OF SWITCHING — Reliable and long life switching, with low and consistent contact resistance, is assured under extremes of shock and vibration by a self-centering, spring loaded, silver alloy wiper. Complex switching arrangements, with intermixed shorting and non-shorting functions, are attainable not only on single sections, but also between sections. Standard index angles include 15°, 30°, 36°, 60° and 90°. Special angles available on request.

VERSATILITY — Enclosure maintaining spacers may be incorporated between sections to facilitate hardware mounting and special space requirements. Additional standard variations include electrostatic shields, dual concentric switches with attached line switches or potentiometers, gasket seal construction, coded output and hi-voltage applications.

Series 600 1⅝" Dia. and Series 100 1⅛" Dia. Environment Proof Rotary Switches

EXPLOSION PROOF — Standard enclosed construction is inherently explosion proof in accordance with Mil-S-3786B, paragraph 4.8.12.

VIBRATION — Conforms to low frequency vibration test Mil-S-3786B, paragraph 4.8.4.

SHOCK — Conforms to shock test type M, Mil-S-3786B, paragraph 4.8.

Precision components for the electronic industry

Shallco
NCORPORATED

P. O. BOX 1089
SMITHFIELD, N. C. 27577
TEL. 919/934-3135

Shallco products are based on over 20 years of experience manufacturing quality components for the electronic industry. Ask about our full line.

SWITCHES

Formerly manufactured by Aerovox Corporation and ema Engineering these rotary tap switches are now ilable from Shallco. Sales, engineering and production vices are available immediately from our Smithfield, . plant for Series CES (all types) and the new 14, 18 22 Series.

This broad line of precision rotary tap switches tures: rugged construction, long-life operation, low ntact resistance, and premium materials. Standard igns offer up to 48 positions per pole, 1 to 8 poles per k, and up to 10 decks.

Special designs include high voltage r.f. switches with lectric withstanding voltage to 7000 volts (rms).

ATTENUATORS

Audio Attenuators. Shallco audio attenuators provide varied electrical characteristics and mechanical features. All materials are of premium quality and our designs provide years of trouble-free service. Circuit types include ladders, potentiometers and T's for balanced and unbalanced lines. Cueing available.

Video Attenuators. These rotary devices are designed to produce accurate increments of loss into the low r.f. range. Low reactive components assure a flat response in a T circuit.

R. F. Attenuators. Shallco rotary types are available in both 50 and 75 ohm impedance. They are available in unmounted, bench, and rack models.

DELAY LINES

Shallco offers custom design of fixed and variable electromagnetic delay lines. Hermetically sealed or encapsulated enclosures. Low-loss toroidal types feature fast rise time. Transponder lines available.

NETWORKS

Fixed attenuation pads, mixer modules, minimum loss pads, high and low-pass filters and other special networks. Standard impedances range 50 to 600 ohms.

end to Dept. EEM-70 for illustrated catalogs listing performance and mechanical specifications

standard grigsby co.

*"Wedgelock" is the exclusive patented construction of Standard Grigsby Switches. All electrical contacts are fastened to the insulating stators or wafers by means of the "T" slug. This forced fit prevents any loosening of the contacts as often happens in conventional rivet construction when solder heat is applied. The unique shape of the "T" slug design also eliminates rotation and twisting of contacts thus assuring maintenance of accurate timing throughout switch life.

Thumbwheel Switches

SMT switches are the latest of the Standard Grigsby thumbwheel family and are in keeping with the trend towards sub-miniaturization. These switches utiliz. the sub-miniature SM type stators and may be produced with either one or multi-wafer assemblies driven by a common thumbwheel. T-101 thumbwheel switches are available with either single or double wafer sections, and utilize a stator equivalent in size to the 4M series.

Ganged Switches

Most Standard Grigsby switches may be supplied ganged. Standard and custom made brackets are available. Write or phone for details.

Sample Switch Kit

Grigsby Switch Kits are available for most types at a harge for use by laboratories and Design Engineers for assembly. The basic kit for each switch type includes emblies, wafers, clips, strut-screws, and other compo- ired to produce a minimum of (25) switches. The switch tended to be used in making prototype assemblies only.

TAPESWITCH®

PRESS-AT-ANY-POINT RIBBON type & MAT type SENSING SWITCHES

BUY THE RIBBON SWITCH IN THE SIZE YOU NEED!

SUCCESSFULLY PROVEN IN ALL INDUSTRIES. PATENTED CONSTRUCTION WITHSTANDS MANY TONS OF FORCE YET CLOSES ON LIGHT FINGER PRESSURE. TAPESWITCHES ARE UNEXCELLED FOR—SAFETY . . . AUTOMATION . . . ANTIBURGLAR SYSTEMS . . . COUNTING . . . TIMING . . . DOOR CONTROL . . . LIGHT SWITCHING . . . MACHINE CONTROL . . . MATERIAL HANDLING INSTRUMENTATION . . . COMPUTER AND CONSOLE SWITCHING . . . AND MANY OTHER APPLICATIONS.

These versatile sensing switches may be used directly with **electro-mechanical devices** and **solid state devices.**

Pressure at any point from hand, foot, or vehicle will cause contact. These are ideal for instrumentation and control tasks because of their **flat configuration, "Press-at-any-Point" operation,** and **sealed** qualities.

TAPESWITCHES are designed in accordance with the best principles of switch and cable design, with jacketing and insulation meeting the requirements of MIL-C-9154 and MIL-I-631C respectively. Results are exceptional stand-by reliability (required in alarms) as well as excellent contact performance.

Typical life tests with repeated impacts at ONE POINT on a Tapeswitch have given over three million operations without failure. (24 Volt AC relay coil 0.3 Amperes)

RATINGS: All Tapeswitch products are rated 117 VAC, at 1 Ampere. However for floor switching, 30 VAC or less is recommended.

NOTE: U.L. classification for Ribbon Switches does not presently exist.

A FEW TAPESWITCH CONTROL SWITCHES

RIBBON SWITCHES

Factory sealed units with 18 inch connecting wire at one end. Styles shown in box have 8 oz. nominal finger sensitivity. 131-A — 40 oz.; 101-8 — 12 oz. sensitivity. Standard lengths: 1, 2, 5, 8, 10, 12, 15, 18, 20 ft.

PE-30 UNDER CARPET SWITCHING RUNNER

30 inches wide x 3/32 inches thick ar ca be cut to any length from 25 ft. or 5 f ol For indoor use under carpeting. pe switches in parallel between Polyeth en sheets. Tinned wires for easy twisti o soldering connections.

TAPESWITCH RELAY R-1

FOR NORMALLY CLOSED OR NORMALLY OPEN OPERATION OF ANY TAPESWITCH. Plug-in unit gives NC or NO control of 117 Volts AC, 5 Amperes. Built-in low voltage transformer.

108 ASTR AL SAFETY E GE

Unique patented design universal s ety cushion switch for leading edge of rs machinery, etc. Responds to side thrus an head-on thrust. Std. lengths: 6, 8, 1 12, 15, 20, 25, 30 ft. OTHER STYLES SO AVAILABLE. Mounts on edges 1" to ½" wide. Cushion depth 1⅞".

CVP SWITCHING MATS

CVP style mats are durable yet flexible, and only ⅛ inch thick (approx.). Available in sizes 20 x 32 inches, 17 x 23 inches and 6 x 23 inches. Very popular items.

NC-3 NO-1 FOOTSWITCH 11

NC-3 is a unique normally closed fer style switch 1⅛" diameter, by 3/16" ck Designed to sound alarm when obje is lifted off switch. NO-1 similar form ut normally open. 20 oz. nominal sensit ty. Footswitch 111 normally open flat ru ed sealed switch, 2" x 5" x ¼" thick.

RBMA ROAD SWITCH

Successful, rugged roadway switch for counting, timing, controlling by vehicles. Replaceable sealed switch element. 2" wide, 7/16" thick. Std. lengths: 2, 3, 5, 8, 10 ft. Cast iron end protectors available.

SENSITIVE AIRWAVE SWITCH MODEL AW

Pn m pu s but n

High quality diaphragm switch with ad st able sensitivity. For operation by t ng **squeeze**/impact, air motion, vacuum. Re mote push-buttons for explosive env n ments, etc. Silver contacts operate nor ly open or normally closed.

TUMBWHEEL SWITCHES

"PANEL-MITE"
"MINI-MITE"

Compact, molded printed-circuit switches for limited space and in-line readout. Modular type for front or back panel mounting. ½" between center lines, 1" or 2" height binary or decimal codes with adjustable stops available.

STEPPING SWITCHES

TECH LABS switches are now standard equipment in missiles as well as in ground controls. Furnished sealed to meet all specs. Solenoid and motor driven models.

ATTENUATORS

A complete line of audio and r.f. attenuators with both manual and REMOTE CONTROL. We will design components to meet your specific requirements, if standard units are inadequate. Please write for catalogue and send us your specs for estimate.

TAP SWITCHES

TYPE 3A MINIATURE TAP SWITCH

Molded from Diallyl Phthalate
Has adjustable stop

Specifications
Size: 1" diameter. 1¼" with terminals. 1 deck, 1-1/16" long. ½" for each additional deck.
Rating: 1200 volts rms, 2000 VDC, 5 amps. (carrying) 115 V.
Insulating resistance: 100 megohms minimum at 500 volts DC.
Life: 1.5—2 million revolutions.
Temperature range: —65°C to 100°C.
Mounting: single hole.

TYPE 2A & 2M

The Type 2A, a standard control switch for precision instruments and equipments, comes in 2-24 positions and 1-4 poles per deck, with phenolic insulation. The 2M is identical except for Melamine insulation. Both are rated for 3 AMP and have adjustable stops. Code "S" denotes "shorting" and "N" "non-shorting".

SQUARE SWITCHES

TYPE 800 TYPE 10A

Square switches from 1 5/16" to 15" available from stock parts, as standards or assembled to your specifications. Adjustable stops available. Will meet all applicable government specs.

PROGRAMMING SWITCHES

Adjustable programming switches, 24 or more positions. Available in MBB and BBM; manual, motor or solenoid driven. Contact ratings from dry circuit to 20 amps.

POWER CONTROL AND PACKET SWITCHES MILITARY & INDUSTRIAL TYPES

Heavy duty rotary snap-action switches from 10 to 200 amps. Built to withstand severe shocks without momentary interruption.

Power control switches for circuit breaking, motor control and transfer application. Current ratings of 10, 16, and 25 amps.

TRANSTECTOR. PROTECTOR

protect IC's, equipment, systems . . . against accidental shorting, excessive voltages or currents!

Now you can have absolute protection in ≤50 nanosec. Standard unit operates like typical SCR crowbar circuit, but gives higher reliability, accuracy and surge capacity. Solid state. Fail/Safe. Inexpensive. Can meet Mil. Specs. Select from the most complete line of models, trip points and optional features.

HOW TO SELECT

1 SELECT MODEL REQUIRED — MODEL ( )

2 SELECT TRIP POINT VOLTAGE — VOLTAGE ( )

TRIP POINT should be at maximum "safe" voltage level your circuit can handle without damage, and should be as close to your regulated voltage as possible, yet high enough to prevent nuisance tripping. Be certain to allow for regulation tolerance of power supply and nominal trip tolerance of Protector.

AC trip points are selected by choosing a point between *peak* voltage (not RMS) and circuit failure level.

3 SPECIFY AC OR DC — TYPE ( )

4 SELECT OPERATING CURRENT LEVEL — SERIES ( )

Choose SERIES within which circuit's nominal current range falls.

5 SELECT OPTIONAL FEATURES — OPTIONS ( )

6 IF USING CURRENT LIMITING POWER SUPPLY

Verify the maximum CONTINUOUS POWER DISSIPATION of the Series selected. If power to be dissipated exceeds specified wattage, select next higher Series. Assume maximum voltage drop across protector to be 1.25VDC at rated temperature.

PART NUMBER ( ) ( ) ( ) ( ) ( )
1 2 3 4 5

COMBINATION CIRCUIT PROTECTORS

Protect against transient voltages, currents and shorts with or without Overvoltage, undervoltage, under/overvoltage, multi-sense, variable adjust options. Operating temperature −55° to +85° C. Complete unit dimensions: 3.25" L x .75" W x 2.0" H. Custom trip points available.

CURRENT TRIP POINTS
Instantaneous trip breaker is standard. Time delay available

Unimax Switch®

The complete line of snap-acting Standard, Miniature, Subminiature and Miniature Subminiature switches for commercial and military applications.

Low-Force switches
TM Series

17 standard models feature low operating force with negative force gradient, and a complete line of lever and lever actuators. Four terminal styles include uick-connect. Molded-in overtravel stop limits n movement, preventing overstress and shock ng of blade. Mounting holes are independent ver for improved electrical insulation and high strength. Two lever pivot locations provide r low actuating motion or forces as low as 8 grams. Ratings up to 15 amps. **Detailed specifications in our Catalog 60.**

Basic subminiature switches
Type LM

Long life subminiature switches provide reliable switching in limited space. Variations available include integral or auxiliary actuators, ratings to 10 amperes, silver or gold contacts and choice of four terminal styles. **Detailed specifications in our Catalog 60.**

Basic precision switches
Type 2HB

The basic switch for close control of electrical its requiring combinations of small motions, repeatability and long life. Switches can be ed or unsealed and all types of actuators are lable. Ratings start at 20 amps to 480 VAC. UL CSA listed. **Detailed specifications in our Cata- 60.**

General purpose switches
Type A

Designed for applications that require fully enclosed, high performance, low-cost, snap-acting switches with quick-connect terminals. Stall free, with high repeatability. Single or double pole, sealed or unsealed with a full range of actuators. Rated 15 or 25 amps at 125/250 VAC. **Detailed specifications in our Catalog 60.**

Complete 48 page catalog #60, at your request

LPB® Lighted Pushbutton Controls

Complete 12 page catalog #50, at your request

LPB Series 9 Lighted Push-Button Switches

imax LPB **Series 9** are four lamp nted pushbutton panel controls de- ned to meet the requirements of L-S-22885/9-12 (for QPL approved ntrols designate series 9M). They offered in a wide range of display les, color coding and customized ssages can be easily changed or dified in the field. **For more tech- al information request our Cata- 50.**

LPB Series 9C Lighted Push-Button Circuit Breakers

Unimax LPB **Series 9C** are lighted pushbutton circuit breakers with a unique combination of four lamp lighted panel controls and snap-on hydraulic-magnetic circuit breakers. The time delay inherent in this line permits relatively high inrush current (common in starting motors, lamps, etc.) without tripping. But it provides full protection from sustained overloads and short circuits. **For more technical information request our Bulletin 511.**

LPB Series 2 Lighted Push-Button Switches

Unimax LPB **Series 2** is a snap-acting pushbutton switch combining the functions of circuit control and pilot light indication in one compact, low-cost unit. It is easy to install, available in alternate or momentary action with red, yellow, green white or clear lenses. Subsequent lamp or lens replacement being accomplished quickly, without special tools from the front of the panel. **For more technical information request our Bulletin 512.**

WILD ROVER CORP. TOUCH SWITCHES AND KEYBOARDS

THE TOUCH INTERFACE Momentary-Contact Touch Switches, Keyboards and Switch Arrays

The Wild Rover Corporation, pioneers in touch switch technology, now offer a complete line of products — from economical units that require only a low-force touch contact — to units that operate with no contact at all. And, the new monolithic keyboard, a **flat surface** that delivers keyboard function with touch action. The selection and versatility of these products makes it possible to bring "touch" to almost any control need.

TC-1™ TOUCH SWITCHES For Low-Force Contact Touch Effect and Economy

The TC-1 touch units are a true retrofit for almost any momentary switch. They are available in three styles with or without illumination — and are **expressly designed for driving low level logic.**

SPECIFICATIONS:

RATING: 120 VAC, 200 W.; 24 VDC, 1 amp. For inductive loads divide rating by half.

RESISTANCE: 20 milliohms nominal. Same impedence maintained after 100,000 cycles at full rated load.

BOUNCE SUPPRESSED: Extremely low noise—suitable for driving low-level logic directly.

LIFE: In excess of 1,000,000 cycles.

WIDE OPERATING TEMPERATURES: —65° F. to 150° F.

RUGGED CONSTRUCTION: Unbreakable Lexan® case. Units are dustproof, oil and water resistant. All seams welded.

SLIGHT WEIGHT AND COMPACT SIZE: 0.3 oz. nominal weight: 1″ x 1″ x ½″ max.

TERMINAL TYPE: Screw-type, recessed 4-40 screw (screw in solder lug available).

COLORS: Frames — red, black, blue, white are standard and other colors on special order. Touch Plate — any color, design or wood grain can be obtained. Any legend.

STYLES: (1) Sq. frame contour-face; (2) Sq. frame flat-face; (3) Round frame flat-face. Styles 1 and 2 are available with illumination.

TC-1 ILLUMINATION

TC-1 Touch Switches are available with two illumination options:

Bright-Spot: a distinct "soft light" feedback that is ideal for business and office machines. Visible in a well-lighted room, but not apparent in the **off** stage, thus assuring optimum dead panel effect.

Bright-Point: a sharp, pinpointed star of light that is clearly visible even in direct sunlight. It provides positive feedback without exceeding thresholds for visual irritability. Perfect for aircraft.

TC-2™ TOUCH SWITCHES For Null Force Contact Touch Effect and Ultrasensitivity

The TC-2 touch units are **solid state** and provide the maximum in touch sensitivity. Units operate on contact alone without any "force" or effort whatever.

SPECIFICATIONS:

RATING: 120 VAC, 200 W.; 24 VDC, 1 amp.

RESISTANCE: .25 ohm nominal.

LIFE: Indefinite.

OPERATING TEMPERATURE RANGE: 25°F. to 150°F.

SOLID STATE CONSTRUCTION: Epoxy casting.

PRACTICAL SIZE AND WEIGHT: 1½″ x 1½″ x ½″ D.; 58 Gm. nominal weight.

TERMINAL TYPE: Pigtails.

COLOR: All bases are black with stainless steel touch surface. Also, touch surfaces can be supplied in transparent glass or plastic suitable for shadow-box illumination, rear projection or window. Touch surfaces may also be remotely located. Flexible legendizing capability.

TC-3™ TOUCH SWITCHES For the No-Contact Effect And True Proximity Action

The TC-3 touch units are solid state deliver proximity-controlled switching operations where this unique quality desirable.

SPECIFICATIONS:

Characteristics for the TC-3 are identical to the solid state TC-2 switch — except for its property of proximity activation. TC-3 unit has a proximity-field adjustment for maximum flexibility.

NEW TC-KEY™ MONOLITHIC KEYBOARD The One-Piece, Flat Surface That Provides Touch Control . . . At Every Key

The new TC-KEY Monolithic Keyboard is the latest development in touch technology applied to the needs of keyed functions. Form and shape are unlimited. Send us a picture of the keyboard you need and **we'll produce a picture that works!**

- Extremely economical — a fraction of cost of other electronic keyboards available today.
- Unique flat surface design offers unprecedented flexibility — units may be as thin as ⅛″ and can be simply glued in position.
- Bounce suppressed.
- Compatible with low-level logic.
- Life in excess of 10^7.
- High speed operation with microsecond ON and microsecond OFF.

THERMOELECTRIC COOLI

INTRODUCTION TO THERMOELECTRIC PRODUCTS

Thermoelectric cooling units have many unique advantages over other types of coolers in their application area.

SIZE

They can be tailored to fit the application by easy addition or subtraction of modules to fill the need accurately and avoid waste.

POWER INPUT

Due to tailored modular construction, power requirements can be reduced to a minimum. Power is provided through a single pair of leads.

RELIABILITY

There are no parts that wear or clog, and no delicate moving parts. Gases, corrosive liquids or chemicals that will leak or dissipate with age are also eliminated. These features result in greatly reduced maintenance requirements.

LOGISTICS

There are no requirements at the load for pumping refrera or for a source of coolant such as liquid nitrogen to be ddd during operation of the system.

REMOTE CONTROL

The unit and heat sink are required in the cooling ar; t power supply and most other control equipment c mounted and operated remotely.

COOLING RANGE

Thermoelectric coolers are capable of operating fro ar heat-sink temperature from +100°C to —100°C.

TEMPERATURE CONTROL

Simple electronic control schemes allow control wi in fraction of a degree of desired load temperatures ab e below ambient.

APPLICATION OF THERMOELECTRIC PRODUCTS

ELECTRONIC COMPONENTS

Cold traps for vacuum chambers
Crystals
Discrete silicon components
Inertial guidance systems
Infrared detectors
Integrated circuits
Lasers
Masers
Nuclear radiation detectors
Parametric amplifiers
Photomultiplier tubes
Vidicon tubes

TEMPERATURE CONTROL UNITS

Constant temperature chambers
Environment chambers
Integrated circuit test chambers
Temperature baths

COMMERCIAL REFRIGERATION

Aircraft water coolers
Cream coolers
Display cabinets
Ice cube makers
Photo developing solution co er
Picnic baskets
Restaurant service-stand co ers

MEDICAL AID LABORATORY INSTRUMEN S

Blood coagulators
Cold probes
Dew point hygrometers
Microscope cold plates
Mobile drug coolers
Surgical instrument-coolers
Test tube coolers

CUSTOM DESIGN

Engineering back-up is available for designs to meet customer specifications

SPECIAL ASSEMBLY

Ring type cooler to stabilize the inertial navigation system at 40°C and pump 280 watts with an input power of 338 watts.

This system cools one gallon of chemical solution to 40°F below ambient with 850 watts of input power. Load capability 450 watts to 0 △T.

The principles, applications, and d ign possibilities of thermoelectric co ing are discussed in this booklet.

TMENT OF BORG-WARNER CORPORATION

WOLF AND ALGONQUIN ROADS, DES PLAINES, ILLINOIS 60018, PHONE 312/827-3131

CAL-R® INC. THERMONETICS DIVISION

a subsidiary of CapTech, Inc.

GENERAL NOTES All thermistor components conform to AQL and confidence levels as specified in MIL-T-23648 as outlined by Tables V and VI.
Coatings, encapsulations, markings, probes and resistor/thermistor networks . . . are also available to meet specific requirements b ont our Applications Engineering Department.
Resistance tolerances of ±1% through ±20% are available and may be specified at 25°C or any temperature within the operati ran
Maximum operating temperature with leads 150°C. Contact factory when application temperature exceeds 150°C.
Special lead materials, standard leads, and other variations are available to meet your design requirements.

RESISTANCE RATIO vs TEMPERATURE CURVE

TEMPERATURE SENSITIVE RESISTORS

SILICONE COATED AXIAL POWER RESISTORS

ERIES/FEATURES:

perweld leads standard, hot tin dipped for maximum solderability. Nickel Alloy 180 available where maximum weldability is required.
pletely welded construction terminal to terminal.
e-alumina and steatite ceramics, centerless ground for uniformity, chemic- treated for utmost purity of winding surface.
gh silicon coating, to give maximum wire protection and extra high resist- e to moisture.

RICAL CHARACTERISTICS

ANCES: 10, 5, 3 and 1%.
RATURE COEFFICIENT: +.45%/°C ±.02%/°C.
CTRIC STRENGTH: greater than 1000 V.A.C.

ONMENTAL Meet or exceed applicable paragraphs of MIL-R-26D.

MINIATURE WIRE WOUND BOBBIN STYLE

MB and AB SERIES/FEATURES

1. Terminals welded to end cap for maximum strength — will withstand 15 lbs. linear pull.
2. Double slots tangent to mandrel to prevent shorting between pie windings.
3. Protective overcoating covering entire resistor before molding insures maximum moisture protection and secures winding without introducing stress.
4. Resistor element encased in non-burning epoxy by transfer molding techniques.
5. Standard leads tinned copperweld Nickel or Dumet available.

ELECTRICAL CHARACTERISTICS

TOLERANCE: 10, 5, 3 and 1%.
TEMPERATURE COEFFICIENT: +.45%/°C ±.02%/°C.
Windings: M
WINDINGS: Multiple pie reversed type to minimize inductance (except on Miniature Series).

ENVIRONMENTAL Meet or exceed applicable paragraphs of MIL-R-93D.

CARBORUNDUM® THERMISTORS

MEDIUM SENSITIVITY, NTC RODS

Carborundum thermistors are non-linear (pos. or neg. temperature coefficient) resistors which offer a wide range of temperature-coefficient characteristics. The coefficients available are approximately .3% per degree C to 10% per degree C at 25°C. Carborundum thermistors are bonded ceramically through a high-temperature firing process into disc and rod-shaped bodies in a wide range of sizes to provide the desired resistance values, thermal time and dissipation constants, and temperature coefficients for a wide variety of electrical and electronic circuits.

Our long experience in the design of special resistance devices, together with wide experience in the field of ceramic technology, assures a stable and uniform product to meet your thermistor requirements. All materials used in the manufacture of Carborundum thermistors are of the highest quality. Strict quality control is maintained over all stages of manufacture and a minimum of two calibrations at the specified reference temperature and/or load current is standard.

CARBORUNDUM® THERMISTORS

POSITIVE TEMPERATURE COEFFICIENT UNITS

Notes:

1. Dielectric coating, marking optional at extra cost.
2. Standard lead length 1½". Non-standard length available from ¼" through ⅝", and from 1½" through 2". Standard leads are tinned copper.
3. Standard kinked leads (for PC board use) furnished on request.
4. Also available in chip form, and in rod and tubular forms for self-limit heater applications.

THERMOCOUPLES

ete line of Thermocouples and other Temperature Sensing Devices, Associated re, Heating Elements and Metal Sheath Mineral Insulated Conductors.

Purpose Instrumentation includes el Sensors, Neutron Detectors, Co-axial and other Cables. Our QC is t of extensive research that makes products of fine quality and top y. The special knowledge gained in turing instrumentation for nuclear has given rise to a modern pro- facility. Here, moisture and other nation is prevented. Moreover, as- s are completed using the most reli- ving, swaging, heat-treating, welding ting equipment.

ineering department is especially adept in solving problems concerned with heating or temperature sensing. Among the many facilities available are non-destructive test and calibration techniques including radiograph, dye penetrant and helium leak testing. These are used to monitor our standard products and to handle special testing requirements.

Replacement Thermocouples and Hardware Components are interchangeable. Prompt attention to customers' need keep down time to an absolute minimum. Product reliability and immediate availability make it a first choice for many.

Our complete catalog lists thousands of combinations in an easy step-by-step procedure.

to order specify . . .

LACEMENT THERMOCOUPLE COMPONENTS

ERMOCOUPLE WIRE A wide of bare and insulated thermo- wire available from stock for r delivery, in matched pairs to ndard Limits of Error.

SULATORS Made of high qual- amic and available in many and sizes, may be used with ermocouple wires to 2500°F.

S AND JACKS Available to every thermocouple wire.

TTINGS Fixed and Adjustable s are available in stainless steel ass. Consult factory for special ements.

AVAILABLE: Variety of Thermo- and Industrial Heads.

HEATING ELEMENT ASSEMBLIES

QC MAX TEMP heaters are manufactured with the highest quality material and techniques producing elements that have long, dependable operating life with more heat in less space. The densely compacted assembly offers the most efficient heat transfer with the lowest possible temperature gradient between wire and sheath. QC heaters are available in virtually unlimited lengths, in a variety of diameters from .040 up to .430 and in any watt-density required.

APPLICATIONS:

- Heat tracing of pipe lines
- Heating valve mechanisms and other flow controls
- Heating vessels—interior and exterior
- Heating extrusion molding nozzles
- Heating plastic forming machinery
- De-icing of weather instruments
- De-icing of weather-exposed surfaces including sidewalks, roadways and bridges.

SHEATH CONDUCTOR

QC SHEATH CONDUCTOR consists of metal conductors surrounded by mineral insulation and covered by a metal sheath. QC is drawn to size and annealed producing an assembly with circular cross-section wires, hard packed high resistance insulation with maximum di-electric strength, high thermal conductivity and an outer metal sheath with the heaviest wall thickness available. Only the finest quality materials are used in making QC SHEATH CONDUCTOR to ensure long service life.

QC SHEATH CONDUCTOR is available in an almost infinite number of combinations of materials and conductor configurations.

EASILY USED

- QC can be formed about a minimum radius twice its sheath diameter
- Brazed or welded
- With standard tube or compression fittings
- Held to specific wire diameters or resistance
- Flattened without impairing electrical qualities
- Spliced for longer lengths
- At temperatures above 1000°F

TEMPERATURE CONTROL FOR AEROSPACE

Temperature control system for LM rocket motors: Heater plus solid-state controller built to function over a 365°F. range.

Molded air-inlet duct with integral electrical heaters that provide anti-icing for helicopter engine.

Special oven to hold 60° ± 2°C in any ambient from −5 to +55°C. Warm-up time 20 minutes max. Designed for plug-in service and immediate access to circuit board for repairs.

Gyro supports, mass produced for a critical missile program. The metalwork is also supplied by Cox & Company, Inc. Heater resistance tolerance ±3%. Temperature sensor resistance tolerance ±.064% at 133°F.

In 1947 Cox & Company, Inc. pioneered in producing custom-made electrical heating elements and temperature control systems. In the middle fifties we began to supply electrical ice-protection equipment for aircraft. Today, having produced military and space qualified hardware in over 9,000 different designs, we remain a leader in the aerospace temperature control field. Our design, testing and manufacturing facilities, all devoted exclusively to thermal engineering, are in many respects unequaled in the aerospace industry. We believe that our products have records of performance and reliability that are unrivaled. There have been no reported failures of any of the more than two-and-a-half million Cox Thermopatch ® heating circuits in service, for example, except when there has been mechanical damage.

HEATING ELEMENTS

Cox-designed heating elements can be made to fit virtually any surface, including surfaces with compound curvature; they can be supplied in any suitable watt density distribution, with densities as high as heat transfer conditions permit. Cox heaters are made with a wide variety of materials and processes, the choices depending on the characteristics of the parts to which they will be mounted, environmental requirements and such customer specifications as flammability, toxicity and outgassing.

TEMPERATURE SENSORS AND CONTROLLERS

Cox produces surface-mounting resistance-element temperature sensors that combine mechanical flexibility and unusual ruggedness with high accuracy and stability. They are made flat but can be cemented in place on either flat or curved surfaces; if desired, a sensing element can be combined integrally with a heating element.

Cox has also developed precision mercury-in-glass thermostats which have been tested exhaustively for both durability and performance. These thermostats have been used in series with miniature solid-state amplifiers in a number of temperature control systems that have been qualified for manned space flight.

Solid-state controllers, using either resistance-wire sensors or thermistors as feedback elements, have been designed for many military and aerospace applications.

OVENS FOR CRYSTALS AND COMPONENTS

Cox is a major source for special production-run ovens and frequency standards custom-designed to meet previously unobtainable performance requirements; fast warm-up, with times under 2 minutes for temperature excursions exceeding 150°C and stability within ±.003°C over an ambient range of −65°C to +60°C.

ELMWOOD® SUB-MINIATURE SNAP-ACTION THERMOSTATS

Elmwood thermostats are engineered for quick thermal response. Their heart is the bimetallic snap-acting disc which has proven highly reliable and serviceable over hundreds of thousands of cycles. Elmwood precision thermostats are manufactured and tested to conform to military specifications MIL-E-5272. Nickel plating is standard; other plating available. A variety of brackets and studs, as shown, are standard.

- Many mounting arrangements
- Exposure from —65°F to +550°F
- Proven Military and Civilian Performance Record
- Narrow or Wide Differential
- Rated to 15 Amps.
- Immediate Delivery from Stock
- Custom Packaging

When contacts are closed, current passes from terminal to terminal through the stationary contact to the movable contact, which is actuated by the snap movement of bimetal disc. This disc, which is fully insulated from the switch chamber by the pin and disc retainer, is affected by surface or ambient temperature changes only. Upon reaching the opening temperature, the disc snaps from a concave to a convex shape, releasing the pin which opens the contacts. The open circuit allows the temperature to drop and causes the disc to snap to its original position, closing the contacts. A thermostat which closes on a rise in temperature operates in a similar manner, but in reverse action.

ELMWOOD #3100

DESCRIPTION	ELECTRICAL RESISTIVE VOLTS	AMPS	THERMAL RANGE	DIFFERENTIAL	TOLERANCE
 Precise, reliable unit for electronic communications, missile and aircraft controls, heater blanket controls and crystal ovens. This inexpensive unit is factory-calibrated, has the highest quality operating parts, a phenolic base and metal closure. These assure maximum dust protection and high thermal and electrical dependability. It is available with a variety of mountings and terminals.	30 AC/DC	6	+0°F to +350°F	Wide 12°F or more STD	Wide ±5°F STD
	125 AC	6		Narrow 6°F Max. Avail. 80 to 200°F	Narrow ±3°F Min.
	250 AC	3			
This thermostat is hermetically sealed with high compression glass and heliarc welded steel case. It is so constructed as to withstand the severest environmental conditions such as altitude, shock, vibration and corrosive atmosphere. It has been extensively tested by government agencies, and has been used for many government and civilian purposes, such as aircraft warning controls, de-icing equipment, etc. Ideal for packaging in special enclosures.	30 AC/DC	6	—10°F to +500°F	Wide 12°F or more STD	Wide ±5°F STD
	125 AC	6		Narrow 6°F Max. Avail. 80 to 200°F	Narrow ±3°F Min.
	250 AC	3			
Low silhouette SPST switch, hermetically sealed, available narrow or wide differential as standard. Temperature calibrations pre-set at factory, 100% inspected. Open or close on temperature rise. Heliarc welded in steel housing, glass-to-metal seal at terminal junction. Maximum resistance to shock and vibration. Ideal for use in heater blankets, computers, crystal ovens, electronic and radar equipment, gyros, airborne de-icers, etc.	30 AC/DC	4	—10°F to +350°F	Narrow 6°F Max. Avail. 50 to 225°F	Narrow ±3°F STD
	125 AC	4		Wide 12°F or more STD	Wide ±5°F STD
This inexpensive control unit is designed with either phenolic (up to 300°F) or ceramic base, and has a tight-fitting dust-proof metal closure. It is recommended for applications where its heavy electric construction makes it ideal to control high amperage uses.	30 AC/DC	15	+0°F to +350°F	10°F Min.	±5°F STD
	125 AC	15			
	250 AC	8			
A precision, single-pole double-throw, hermetically glass sealed, heliarc welded thermostat that is engineered to instantaneously reverse a signal from one circuit to another. Airborne and ground control equipment are ideal uses for this highly reliable thermal switch.	30 AC/DC	2	+0°F to +350°F	12°F Min.	±5°F Min.
	125 AC	3			
	250 AC	2			
Sub-miniature SPST, snap-action switch measuring only .426" in diameter, with narrow (±3°F) tolerance and narrow (6°F) differential. Hermetically sealed steel housing, glass-to-metal seal, all welded construction. Fast, reliable, excellent for crystal ovens, gyro platforms, heater blankets, computers, test equipment, etc. Three terminals and two brackets available. Temperature calibrations are factory preset, 100% thermally and mechanically inspected.	30 AC/DC	2	+90°F to +250°F	Wide 20°F Max.	Wide ±8°F
	125 AC	2		Narrow 6°F Max.	Narrow ±3°F

THERMISTORS from FENWAL ELECTRONICS

1. **Glass Coated Beads** — used where small size, fast response, high precision, stability, and temperatures to 600°F are required.

2. **Glass Probes** — medium-small in size. Many of the advantages of beads but rugged, more easily mounted, useful in liquid media.

3. **Iso-Curve*Interchangeable Thermistors** — these units available in bead or glass probe configurations, follow standard curves over wide temperature range, and are completely interchangeable. Units match standard curves as close as ±¼% of resistance or as required.
*R.T.M.

4. **Discs** — used where medium power dissipation is a requirement and space not a problem. Useful to 300°F.

5. **Washers** — used where high power dissipation is a prime requirement.

6. **Rods** — these units have power dissipation intermediate between discs and washers and are also used where their physical shape is an asset.

7. **Mounted Beads** — provide ease in using glass beads in such applications as gas chromatography, flow and vacuum measurement, etc.

8. **Vacuum and Gas Filled Assemblies** — high power sensitivity for specialized circuit applications.

9. **Probe Assemblies** — standard catalog types or built to specific military or commercial requirements. We are experienced in design of probe assemblies for all fields of application including industrial control and indication,

aerospace — specializing in telemetry applications, ar oceanographic — featuring fast response, very high pre sure, and interchangeability using our Iso-Curve Thermi tors.

10. **NEW "LOW COST" Uni-Curve* Interchangeable Thermistors** — completely i terchangeable units having an accuracy of ±0.2°C over temperature range of 0°C to 70°C and available on specia order to other tolerances and ranges.
*TM

ISO-CURVE® Interchangeable Thermistors

F.E.I. Iso-curve* thermistors are special bead and glass probe thermistors that have been precision matched at the factory to standardized resistance-temperature curves. They have the unique and valuable characteristic of complete electrical interchangeability. In addition they offer all of the functional advantages associated with standard thermistors, including large resistance change per degree of temperature change which provides high accuracy and resolution.

Thermistors are normally rated by the value of their resistance at 77°F Standard units having the same rated resistance, however, will not exhibit identical resistance-versus-temperature characteristics over their full temperature range. Iso-curve thermistors, on the other hand, will match a specified R-T curve over full temperature range required. Iso-curve thermistors are available at the present time in seven standardized R-T curve values: 500, 1K, 2K, 4K, 15K, 25K and 100K. These standard curves represent permanent specifications and an F.E.I. Iso-curve thermistor purchased five years from now will be perfectly interchangeable with one of the same value purchased today.

*MADE UNDER PAT. 3109227 AND OTHERS. ISO-CURVE IS A TRADEMARK OF F.E.I.

Thermistor Probe Assemblies

Standardized thermistor assemblies, provided in complet ready-to-mount housings, enable you to take advantage the precision and interchangeability of Fenwal Electronic thermistors. A complete line of thermistor probes is avai able for a variety of missile, aircraft, and industrial appl cations, including liquid level indication and contro temperature measurement and control of fluids and gase and many other applications. Precise calibration can b supplied with individual probes at all desired tempera tures. Completely interchangeable probes with identica resistance-temperature curves are available to any desire tolerance down to 0.1°C over the full temperature range Most of these housings can be made to meet militar specifications if required.

Here's help in applying F.E.I. Thermistors . . .

Fenwal Electronics

"Thermistors: Their Characteristics and Uses." Detailed bulletin gives basic information and many applications. Bulletin 1-1.

Thermistor Housing Manual (L-5). Detailed information on how Fenwal Electronics, Inc. can build thermistor sensor assemblies to fit your requirements.

Iso-Curve Thermistors (L-2). Complete data on patented interchangeable units with identical resistance/temperature curves.

Thermistor Manual (EMC-5). Most complete up-to-date listing of thermistors available. Theory, engineering data, complete specifications.

New 24-page Capsule Thermistor Course Book. A complete primer on thermistors, their characteristics and uses.

G-200. Kit contains 12 different thermistors with complete specs. PRICE $19.95.

THERMISTOR EXPERIMENTAL KITS

G-700. (Above) Kit contains 4 thermistors. PRICE $4.95.

Gulton THERMISTORS

3 good reasons to look to Gulton for Thermistors

he broadest line of terchangeable Thermistors

Values from 1 through 100 K yield precision tracking from -55°C to +150°C

he only manufacturer of hip Thermistors

- Small in size . . . ideal for tomorrow's microcircuits
- Values from 10 ohms to 10 megohms
- Terminations. . . Kovar tabs, gold plated nickel ribbon or silver

he greatest variety of hermistor Probe Assemblies

- Standard or custom designed to your specifications
- For aerospace to medical applications
- From oceanography to lunar landings

Gulton manufactures a complete line of thermistors. . . beads, beads-in-bulbs, beads-in-probes, discs, rods and wafers. For information on Gulton thermistors, write to the Thermistor Department at the address below. In addition, Gulton engineers are available to discuss your thermistor requirements, and when necessary, to custom design thermistors and probes for your unique application.

HARREL PRECISION TEMPERATURE CONTROLS

PROPORTIONAL TEMPERATURE CONTROLLERS

★ **RELIABLE:** Completely solid state. No tubes, moving parts, or relays to wear out.
★ **TRUE PROPORTIONAL CONTROL:** Steady flow of power to heater. True stepless control.
★ **HIGH EFFICIENCY:** Efficiency in excess of 96% at full load.
★ **THERMAL LOOP COMPENSATION:** High sensitivity and proportional-plus-automatic-reset, or proportional-plus-rate-plus-reset action eliminates "droop" and permits closer temperature control.
★ **HIGH POWER:** From a few watts to 300 KW; single phase or three phase; 115, 230, or 480 volts.
★ **ANY TEMPERATURE RANGE:** Control either heaters or coolers from −200° to +1100°C.

PANEL MOUNT CONTROLLERS

General purpose controllers arranged for easy front panel mounting in packaging machinery, plastics machinery, test fixtures, environmental test equipment, etc.

SINGLE TURN DIAL: Convenient direct reading dial for general purpose use.

TEN-TURN, DIRECT READING DIAL: Higher sensitivity than above plus 10-turn setting potentiometer for even closer temperature control. Direct read-out of temperature on large, 4½" dial.

DIGITAL DIAL: Ten-turn potentiometer plus digital dial with 15/32" high numerals readable from 30 ft. away! Includes front panel on-off switch, pilot light and power output meter.

HEAVY DUTY PROCESS CONTROLLERS

Heavy duty, three mode controllers offering proportional-plus-rate-plus-reset action. For chemical processing, large furnaces, etc., where long time lags are involved.

PROPORTIONAL VALVE CONTROLS

For process control applications where temperature is varied by means of motor-driven proportional valves. Three mode, heavy duty construction.

INFRARED SENSING

Where temperature must be controlled without touching the controlled body. Temperature ranges 25°C to 3000°C.

RECORDING CONTROLLERS

Provide permanent record of controlled temperature.

PROGRAMMABLE TEMPERATURE CONTROLLERS

COMPUTER CONTROLLED SYSTEMS

Complete computer control and monitoring systems of temperature, pressure, time sequencing, etc. in an entire plant full of extruders, injection molding machines, environmental test equipment, etc.

TAPE PROGRAMMED CONTROLLERS

Temperature stored on punched tape. May follow any arbitrary program.

ARBITRARY FUNCTION PROGRAMMER

Program set on front panel dials.

Plus Cam Programmers, Switching Type Programmers, and Slope Generator Type Programmers.

FIXED TEMPERATURE CONTROLLERS HIGH RELIABILITY MILITARY TYPES

A-C OPERATED: Precision temperature control to a single selected temperature. Ideal for close temperature control of floated gyros, delay lines, or other military or industrial applications.

D-C OPERATED: For aircraft or missile operation, where the primary power source is d-c.

D-C OUTPUT: Output is pure d-c for applications such as gyro test tables where noise output of relay or standard proportional controller is objectionable.

RFI-FREE CONTROLLERS

Entirely solid state. Unique circuitry ensures freedom from radio frequency interference.

ADJUSTABLE, INDICATING: For use wherever nearby communications and low-level measuring equipment makes elimination of conducted and radiated interference essential.

FIXED TEMPERATURE: For military applications where elimination of RFI is required.

SPECIAL PURPOSE CONTROLLERS

HEATING AND COOLING CONTROLLERS: Bidirectional, time proportioning for control of both heating and cooling by use of solenoid valves or mechanical refrigeration. Entirely solid state.

CONTROLLERS FOR THERMOELECTRIC COOLING: Bidirectional controllers for control of heating and cooling using thermoelectric elements.

HUMIDITY CONTROLS: Precision control of humidity in test chambers, environmental equipment, etc.

RELAY STYLE CONTROLLERS: Completely solid state except for output relay. Off-on or time proportioning. For minimum initial cost.

TEMPERATURE INDICATORS

PANEL STYLE INDICATORS: Available either as temperature indicator or temperature deviation indicator.

DIGITAL STYLE:
Direct digital read-out of temperature in large, 9/16" numerals. Automatic polarity change. BCD electrical output optional.

TEMPERATURE ALARMS

Continuous monitoring of temperature at a remote point. Initiates high or low alarm whenever temperature deviates more than a prescribed amount.

TEMPERATURE RECORDERS

LABORATORY TYPE: Expanded scale readout spreads ranges as small as 2/3°C over entire scale. Eleven ranges give 0.02% accuracy.

PANEL MOUNT, STRIP CHART TYPE: For continuous indication and recording of temperature at remote points.

CABINET STYLE CONTROLLERS

All Harrel controllers are available in an attractive, two-tone gray cabinet, complete with pilot light, on-off switch, & fuse. Convenient tilting bail for easy bench viewing.

TEMPERATURE SENSORS

Wire type resistance sensors provide maximum sensitivity, linearity, & long term stability. Available in patch type for surface measurement, tubular styles, bayonet mount styles, or for air sensing.

TEMPERATURE CONTROLLED ENCLOSURES

Complete oven systems including controller, sensor, heaters, and enclosure. Ideal for maintaining constant temperature of filters, crystals, delay lines, transistor amplifiers, or other critical electronic equipment.

OIL BATHS

Highest precision, reference grade oil baths for calibration or for maintaining temperature of standard cells, zener references, etc.

PRESSURE INSTRUMENTATION

A complete line of pressure indicators, pressure recorders, pressure alarms, and pressure sensors.

PLUS . . . complete temperature control systems and consoles. SEND US YOUR REQUIREMENTS.

ALL UNITS COMPLETELY SOLID STATE

WASHER THERMISTORS

In situations where a thermistor is required to handle a relatively ar amount of power, Keystone washer type thermistors provide a mea obtaining high power handling capability in a small, economical packa addition, washer type thermistors are also very useful where mountin co ditions do not permit the use of conventional component mounting me od

Maximum operating temperature 150°C. Standard units are supplied wit out leads. Units are uninsulated.

KEYSTONE LOW-COEFFICIENT THERMISTORS

For applications such as coil compensation which require a low temperature coefficient thermistor Keystone offers the low coefficient, series 2 group of thermistors listed below. To specify a unit on this list, specify the code number followed by the resistance at 25°C. For example, a 1RS1-100 is a disc, .2″ diameter, and .1″ thick having a resistance of 100 ohms ±10% at 25°C. Various coatings, tolerance patterns and lead configurations are available on request.

CODE NUMBER		1RS1	2RS1	3RS1
TYPE		DISC	DISC	RECT. ROD

2100	2.17	2000	330	9000

*BETA is calculated between the temperatures of 37.8 and 104.4°C. Tolerance on Beta is ±15% for Betas of 1000°K to 1100°K and ±10% for Betas of 1600°K to 2100°K.

Standard Resistance Tolerance is ±10% @ 25°C. Other Tolerances are available upon request.

Standard Thermistors are supplied without coating.

Maximum Operating Temperature: 150°C.

Lead Lengths conforming to printed circuit requirements are available on request.

Units on this list are available in the three lead configurations shown above. Standard tolerance is ±10% at 37.8°C, with ±10% @ 25°C also available. Tolerance on resistance ratio is ±.3. Maximum operation temperature is 150°C. To specify a unit on this list, first indicate RL, OL or AL for lead configuration. Next list the row number, the column number and the number 1 for series "1". If the tolerance is to be at 25 rather than 37.8, add a "T". For example, an RL23SIT is a unit having radial leads and a resistance of 54000 ohms ±10% at 25°C.

L0904-100K-HE-T2	Helium	100K	−275 %/°C
L0904-3meg-HE-T2	Helium	3 meg.	−300 %/°C

Physical size of these units is approximately .1" diameter, and .04" thick, except the RL06X0628, which is a rod, .06" square and .28" long.

Low Temperature Types — Designed for operation various cryogenic liquids these units are especially u for liquid level detection. In this type of application thermistor is slightly self heated by passing current through the unit. The heat developed in the is dissipated more rapidly in the liquid than when thermistor is above the liquid. The resulting cha body temperature results in a change in resistance is easily detected because of the high temper coefficient of the thermistor. The units listed in are standard low temperature thermistors.

Keystone CARBON COMPANY • Thermistor Division • St. Marys, Pa. 15

Versatility you can use in THERMISTOR PROBES

for temperature measurement

Circuit A Circuit B

Combining high temperature sensitivity with high signal level, thermistors are ideally suited for temperature sensing. In circuit A, as the temperature of the thermistor increases, its resistance decreases, allowing more current to flow. If additional sensitivity is required, a bridge circuit like that shown at B may be used.

for liquid level detection

The thermistor is slightly self heated by passing a small current through the unit. The heat developed in the unit is dissipated more rapidly in the liquid than when the thermistor is above the liquid. The resulting change in body temperature results in a change in resistance. This in turn causes a change in the current in the circuit which can be detected by a relay or other means.

The probes illustrated above include stainless steel, aluminum, and chrome plated materials in a variety of configurations. Any thermistor listed at the left can be provided in one or all of the above illustrations. In addition, a variety of other designs are available. These probes are used in conjunction with solid state circuitry for liquid level measurement, and for use as sensors to measure temperature of liquids or surface temperatures. For full particulars, write, detailing your proposed application. Keystone Carbon Company, St. Marys, Pa. 15857.

NEW!

Model 5C1-100 (Digi-Prop)

LOW COST A.C. CONTROLLER

Input: 115 VAC 25—450 Hz.
Output: A.C. synchronously switched 100 Watt load.
Set Temperature: will accept any temperature probe in the O.I. TP Series.
Price 1—9 $53.00

Model 2ZC3—3000-3

3KW 3 Phase

Input: 100—130 VRMS, 3—Phase—WYE
Output: 95—125 VRMS, 3—Phase into a max. resistive load of 1 KW per phase
Type Of Control: Digi-Prop Circuit
Proportioning Bandwidth: 1°C
Set Temperature: Adjustable +20°C to +60°C
Price: 1—3 units $210.00 each

NEW!

Model 7C9-175

Precision Lab Temperature Controller

Each controller is supplied with a calibration chart for the particular probe furnished with the controller.

Input: 115 VAC 25—400 Hz.
Output: Full Wave rectified 175 Watt Resistive load.
Proportioning Bandwidth: ⩽1°C with any O.I. TP Series probe ⩾5K at the temperature set point
Temperature Setting Resolution: ±0.1°C.
Temperature Control at End Item: ⩾*±.005°C at fixed ambient.
Price 1—9 Units $174.00

* dependent upon customer packaging and temperature probe

Note 1: Hall voltage (V_H) vs. B field. { ±.25% of reading from −10 kG to +10kG; ±1% of reading from −30 kG to +30kG } Linearity curves furnished for −10 kG to +10kG and −30 kG to +30kG. Optimized curves for other ranges available on special order.

Note 2: In a free field of 100 gauss the open circuit Hall voltage is 9 mV min. In a closed magnetic circuit, minimum sensitivity is 3.2 mV/ampere-turn.

Power System Transducers

- *A complete line of utility tested and approved transducers to measure all ac power quantities: power, reactive power, voltage, current, frequency and power factor.*
- *Accurate and reliable long-life operation enhanced by: use of high grade solid-state components, epoxy encapsulated, conservative rating and substantial overload capability.*
- *Interfacing with panel meters, recorders, telemetry systems and computers is facilitated by a choice of output options: 50mV, 1mA or 10 V dc full scale.*
- *Sturdy steel case of the same size for all transducer models: easy wiring and neat appearance of group installations.*
- *Case dimensions compatible with standard racks and panel Width only 2": permits maximum number of units per panel space.*

Transducers For Industry

- Single and 3-phase Watt Transducers for industrial applications.
- Motor power models for 240 V and 480 V operation at up to 6, 12 or 24 A load currents.
- Sturdy steel case, designed to fit in standard NEMA and JIC enclosures, providing protection in industrial environments.

- High accuracy, low cost modules for measurement of single phase power and 3-phase motor power.
- Models for standard line, audio and ultrasonic frequencies and for variable frequency operation.
- Small epoxied nylon box with input and output leads, easy to incorporate into customer designs.

Complete specifications on multipliers and transducers available on request.

Specifications subject to change without notice.

ELECTRO MAGNETIC PICKUPS

a new approach to TACHOMETRY, POSITIONING, CONTROL, COUNTING, TRIGGERING, TELEMETERING, SYNCHRONIZATION and other actuation.

3080 Magnetic Pickup smallest–weighs only 10 volt output is higher many larger models.

MAGNETIC PICKUPS SOLVE SPEED MEASUREMENT AND CONTROL PROBLEMS

What They Do . . . generate voltage/frequency from mechanical motion (without contact) in proportion to speed of ferrous metal objects interrupting their magnetic fields. They require no external power supplies, and additional amplification is usually not required.

When a gear tooth, blade or any other magnetic metal projection interrupts the external magnetic field surrounding the sensing head, a voltage and frequency are generated that may be used to: indicate, actuate instruments, synchronize, control, provide accurate data for telemetering.

What They Are . . . a self-generating input device providing the connecting link between mechanical motion and instrumentation, **without contact.**

g rate of flow — For motion study — Safety device — Counting revolutions — Measuring turbine speed

1—Tested at 1,000 inches/sec. with 8-pitch, 12-tooth gear at 0.005 inch clearance and a load of 100,000 ohms.

2—Tested at 1,000 inches/sec. with 20-pitch, 30-tooth gear at 0.005 inch clearance and a load of 100,000 ohms shunted by 250 mmf cable capacity.

3—Tested at 1,000 inches/sec. with 8-pitch, 12-tooth gear at 0.005 inch clearance and a load of 1250 ohms shunted by 250 mmf cable capacity.

4—Tested at 1,000 inches/sec. with 20-pitch, 30-tooth gear at 0.005 inch clearance and a load of 100,000 ohms.

5—Tested at 1,000 inches/sec. with 20-pitch, 30-tooth gear at 0.005 inch clearance and a load of 100,000 ohms shunted by 290 mmf cable capacity.

GENERAL NOTES:

Material of shell and pole piece, type 416 stainless steel, except for shell material of models 3040-A, 3045-A and 3070 which are 303 stainless steel.

Insulation resistance to shell 100 megohms minimum, dielectric strength to shell 500 volts rms minimum for 1 minute. These specifications reflect design at revision date and may be changed to incorporate improvements without prior notice.

*Listed with Underwriters' Laboratories.

† Indicates chisel-type pole to provide high resolution sensing for high speed, small toothed gear detection.

TYPICAL VOLTAGE OUTPUT CURVES

Typical voltage output curves of standard magnetic pickups show relative outputs under identical conditions. All pickups connected by 10′ Belden #8401 cable to a 100,000 ohm load with clearance between pole-piece and a 20-pitch, 30-tooth ferro-magnetic gear. Changes in load, clearance, cable length, gear teeth size, or gear material will produce different results. Measurements are in peak-to-peak volts rather than rms.

METRIX

VIBRATION/PRESSU INSTRUMENTATIO

Model 5115 Vibration Analyzer

Consists of a vibration pickup and a portable battery operate indicator unit, complete with integral oscilloscope. Measures ampl tude and frequency of vibration displacement, velocity or accelera tion in the frequency band 5Hz to 1,600Hz. A continuous variable narrow band pass filter provides means for spectral analysi With filter out the oscilloscope displays vibration in the time domai (amplitude vs. time).

Optional accessories include an oscilloscope camera and a strobo scope for stop motion studies.

Series 500 Accelerometers

Piezoelectric sensing element mounted in lightweight (6 gms.) case provides high output for driving an oscilloscope or VTVM directly in many applications. Including an integral low noise cable, units may be mounted with cement, transfer tape or with optional magnetic or threaded adapters.

Model	502	51
Voltage Sens. (mv/g)	25	
Charge Sens. (pcmb/g)	150	2
Capacitance (pf)	6,000	3,30
Resonance (Hz)	3,000	10,00

Model 5016 Dynamic Pressure Transduce

A high output piezoelectric transducer, this unit is ideal for measuring dynamic pressures in liquids and gases. Stainless steel pressure chamber, entirely sealed from the sensing element, allows use with corrosive fluids. Signal is taken out through a standard BNC coax connector.

Voltage Sens. ....20 mv/ps
Charge Sens....120 pcmb/ps
Pressure Range....0-3000 ps
Mech. Resonance.30,000 Hz
Temp. Range ...−40° to +300°F

Model 5080 Charge Amplifier

Portable rechargeable battery operated unit is used to condition signals from piezoelectric transducers to obtain good low frequency response and a high level low impedance output. Accepts full scale inputs from 100 to 10^6 pcmb in four ranges. Band width 0.1Hz. to 10KHz. Calibration input allows precise gain adjustment. Full scale output is ±1 volt from 20 ohms.

Model 5072 Charge Amplifier

Conditions signals from piezoelectric transducers and provides direct meter readout of forcing function (g's, psi, etc.). Stable high gain circuit accepts full scale inputs from 1 to 50,000 pcmb over band width 2Hz to 20 KHz. Front panel control normalizes gain to match transducer. Plug in filters. Internal oscillator for calibration. Operates from 115 VAC. Rack accommodates six channels.

Series AF Low Pass Filters

Employing extremely sharp cutoff characteristics together with linear phase shift in the pass band, Series AF Low Pass Filters provide maximum attenuation of signals above the cutoff frequency. Units are passive and flat to DC. Toroidal inductors insure low distortion and pickup. Cutoff frequencies from 60Hz to 100KHz. Stop band attenuation 60 to 72 db. Available mounted on cards or in cans. Many standard models available from stock. Short delivery on special units.

600W	600	100	60
1000W	1000	100	60

AND ON CLAMP-ON NT TRANSDUCERS

ew unique wide-band clamp-on current transducers provide ut signal proportional to enclosed current in the d.c. to z range. The less than 1 microsecond rise time makes its ideally suited for motor testing, inverter testing, power monitoring, automotive applications or other areas where ion of high current lines is undesirable.

TIC DISPLACEMENT AND PROXIMITY OR MODEL MS-1100/MA-1100

/MA-1100 Magnetic Displacement and Proximity monitors non-contacting measurement of displacement over a 20 inch The amplifier-power supply unit (MA-1100) can be remotely and provides a 0-5 volt output for telemetry or control ions.

BAND R.F.I. AND E.M.C. MAGNETIC NAS AND MAGNETOMETERS

as designed the MS-1000 magnetic antenna for application rference reduction, testing and measurement of magnetic the d.c. to Megahertz range. Sensitivities of 100 millivolts ss, unamplified, from the basic antenna with output in- ent of frequency, illustrates performance. Vector Magne- units, providing an output of 10 volts in the earth's field, provided for particular applicational requirements.

THERMOELECTRIC DEVICES FOR COOLING AND TEMPERATURE CONTROL

O.S.I. offers a variety of thermoelectric cooling units ranging from the TC Series, used in spot-cooling applications where up to 115 degree Centigrade temperature depression is needed, to the TA Series which can remove up to 85 watts from chemical bath, electronic package, or enclosure. The controllable, reversible heat pumping properties of thermoelectric devices make them ideally suited for temperature control.

MODEL	ΔT DEG. C.	HEAT PUMP WATTS	INPUT CURRENT AMPERES

TM-20	65	20	30
TM-20M	65	20	30
TC-44	90	6	30
TC-1851	115	3	25
TA-6F	55*	85	30

* Specified as cold plate temperature depression from ambient air temperature.

HALLTRON, MAGNETIC FIELD SENSORS

A wide variety of Hall effect probes for use in magnetic sensing or measuring applications are maintained in stock. Units feature high-linearity, low-noise, excellent stability and ruggedness. Physical size/device characteristic combinations permit optimum use of O.S.I. sensors in critical applications.

HS-84	Low Temperature*	350	30,000	.500/.375/.015

* The HS-84 is designed for high sensitivity at −196°C.

ENERGY CONVERSION MATERIALS

Optimized energy conversion materials and elements of the following types are available:

- Indium arsenide and indium antimonide for magnetic sensors and infrared filters.
- Bismuth telluride alloys; N & P type, for thermoelectric cooling and specialized power generation modules.
- Lead telluride for high quality optical infrared coatings.
- High purity arsenic trichloride for exceptional growth of inter-metallic arsenides.
- Research grade bismuth, indium, arsenic, tellurium and antimony.

WATTMETER SPECIFICATIONS

	Model 310K605-P SPECIFICATIONS	Model 5000-P SPECIFICATIONS	Model 325K605-P SPECIFICATIONS
POWER RANGES:			For measurement of single phase two wire, single phase three wire and polyphase three wire loads
Single phase	0-0.5, 1, 2, 4, 5, 10 Kilowatts	500/1000/2000/2500/5000 watts	1.5/3.0/6.0/7.5/15.0/30.0 kilowatts
Polyphase	0-1, 2, 4, 5, 10 Kilowatts		3.0/6.0/12.0/15.0/30.0/60.0 kilowatts
Potential inputs, Nominal	0-100, 200, 500 Volts, RMS	0-100/200/500 volts	0-150/300 volts
Current inputs, Nominal	0-5, 10 amperes, RMS	0-5/10 amps	0-10/20/50/100 amperes
ACCURACY:			
Overall instrument including meter	±0.5% of full scale on each range	±0.5% of f.s.	±1% of full scale
Output signal	±0.25% of full scale on each range	±0.25% of f.s.	±0.5% of full scale
Transducer Output signal	0-50 MV D.C. on each range	0-25 mv d.c.	0-50 mv d.c.
Load Power Factor Range (For No Decrease in Accuracy)	Unity to lead or lag 0.5	Unity to lead or lag 0.5	Unity to lead or lag 0.5 (50%)
Compensated Fundamental frequency range (For stated accuracies at all power factors)	50-70 CRS	50-70 Hz	50-70 Hz
Current overload	100% continuous, 1000% for 3 seconds without damage	100% continuous, 1000% for 3 seconds	50% continuous; 100% for 3 sec.
Enclosure	19" relay rack panel 7" high—8¼" deep with dust cover, or wood formica case 7" x 9" x 9¼"		Portable formica cabinet with binding post terminations. Lid has clearance port for leads when locked.

POWER TEST CONSOLES

r test consoles are used to measure watts, and amperes simultaneously during tests ngle and three phase 3 wire loads such as rs, transformers, appliances, etc.

ese units feature range switching of cur- voltage. The resultant wattmeter ranges utomatically displayed on an annunciator. instrument and the load being measured rotected from overload damage by an auto- built-in current overload circuit.

parameters are displayed on taut band rs with linear scales. The unit is available digital meters. A d.c. analog output signal ach parameter can be supplied for auxil- r control circuits.

POWER TEST CONSOLE
MODEL 1027A

TYPICAL SPECIFICATIONS

Function—Power test console to measure watts, volts and amperes simultaneously during electric motor tests.

Full Scale Power—25 watts to 40 kilowatts. **Full Scale Potential**—50/100/200/400 volts RMS nominal, 75/150/300/600 volts RMS maximum. **Full Scale Current**—0.5/1/2/5/10/20/50 amperes RMS. **Analog Output Signals, Watts, Volts and Amperes**—0.50 mv d.c. for full scale on each range into 10K ohms. Termination on rear panel. **Accuracy**—±1% of full scale for meters. ±0.5% of full scale for analog output signals.

TRANSDUCER CALIBRATOR

instrument is designed for easy field king of calibration of watt, volt and amp ducers. It may also be used for incoming ction. The Model 1369 is completely self ined and requires no external loads. It res only 120 v 60 Hz power.

calibrator compares the output signal the transducer being tested with the out- rom a standard in the instrument. The per- deviation from the standard output is read tly on a % error meter. Independent cur- and voltage linearities can be determined. calibrator will test transducers with full outputs ranging from 25 mv to 10 v d.c. pecified load resistance up to 100 K ohms.

Model 1369

SPECIFICATIONS

Ranges—0-150 volts, 0-5 amperes, 0-500 watts/element, 0-500 vars/element

Power Factor—Unity and 0.5 lag

Metering and Accuracy—Volt and amp indicator ±0.75% of f.s., Percent of full scale output ±0.5% of f.s., Percent of full scale error ±0.25% of f.s.

Transducer Load Resistance—0 to 100 K ohm

Transducer Output Level—25 mv d.c. to 10 v d.c.

PRESSURE TRANSDUCERS

SAME-DAY SERVICE FROM LARGE INVENTORY

The following typical specifications demonstrate the capabilities of these transducers.

1. Combined nonlinearity and hysteresis .25% F.S.
2. Thermal zero drift less than .01% FS/°F.
3. Thermal sensitivity drift less than .005% FS/°F.

Also available custom designed for your application.

MARINE RESEARCH

210-30 series transducers cover the pressure range from 0-500 thru 0 100,000 PSI available in absolute, or sealed reference calibration. This transducer concept features no moving parts, small cavity volume, excellent resistance to shock and vibration.

212-00 Series—Provides a full scale output of 5 Volts DC by using an ultra-reliable miniature amplifier with the rugged bonded strain gage pressure transducer. This system available for measuring absolute, gage and differential pressure.

210-60 series differential transducers provide an output proportional to the pressure difference between the two ports. They are "bi-directional" and are commonly used to indicate actuator position, provide feedback signals from servo valves, etc. Differential ranges from + 500 thru ± 5000 PSID. Line pressure at either port may be as high as the differential rating.

210-10 series pressure transducers are recommended for applications requiring accurate measurements of pressures taken in a small space under industrial environmental conditions. Small size and an 8-32 stud-type pressure fitting facilitate mounting the 210-10 in tight locations. The small volume of the sensing element is responsive to high frequency pulsations.

216-01 series general purpose strain gage amplifier provides a low cost approach to high level signal from a standard strain gage transducer. This amplifier was designed for laboratory and industrial application. Power required is unregulated 28 Volts DC (18-32). Will accept full bridge transducer with impedance of 350 ohms or more.

ORIGINAL TUBE MANUFACTURER

ELECTRON TUBES AND DEVICES

METAL-CERAMIC PLANAR TUBES

l Electric offers an extensive line of planar tubes in diode ode designs for oscillators, amplifiers, mixers, detectors, ny other high-reliability applications from d-c to 10 gc. assed tolerance to environment as adverse as 3000 G's at 3-5 ms, 30,000 G's centrifuge, up to 48 G's RMS n (100-2000 cps, 3 min each plane) and −55 C to C temperature. Have also withstood 10^{18} NVT and 10^{7} nuclear radiation. Minimum noise, in fractions of a db. outputs from low mw to 8kw peak. Tailored for CW, alsed, and grid-pulsed applications. Highest available f power, efficiency, and gain-bandwidth to size and

METAL-CERAMIC COAXIAL TUBES

GE has the exact coaxial triodes and tetrodes for advanced VHF-UHF, RF power amplifiers, oscillators, or broad varieties of transmitter equipments to meet your most demanding application requirements. Advantages: high power gain, efficiency, voltage hold-off, duty factor; broad electronic bandwidth; long pulse-width life; reliable grid-pulsed amplifier or oscillator service.

VTM's

niaturized hielded — Magnetic and RFI shielded — Magnetic shielding and integral isolator

e Tunable Magnetrons (VTM's) are high frequency, ous wave oscillators operating in the microwave re- GE VTM's cover a wide range of frequencies — from over 5600 megacycles, with feasibility existing in X- nd down to 100 mc. Low power (up to 1 watt) for low- ocal oscillators, signal generators. Medium power (1-10 for altimetry, telemetry. High power (over 10 watts up 's of watts) for broadband transmitters, barrage jamming, ne applications. Also magnetically shielded VTM's at 000 mc and 2000 to 4000 mc (1 watt) for driver ap- ons.

KLYSTRONS

GE has over 10 years experience in custom design, manufacture and repair of high-power, multiple resonator, amplifier klystrons and capability to produce klystrons for **specific** applications. The units, constructed of metal and ceramic, use ion pumps to maintain excellent vacuum conditions. Tunable types are designed so each cavity tunes at the same rate for perfect gang-tune tracking across frequency band. Broadband types are tunerless; flat freqency responses are rigidly, permanently determined during manufacture. Tunable and broadband pulsed ampilfier klystrons available in L, S bands.

MCM's*

***Microwave Circuit Modules for use as: Oscillators, Amplifiers, Multipliers, Detectors, Mixers, Integrated Isolators and Circulators.**

General Electric puts nearly 3 decades of commercial and military microwave component experience into the MCM. Designers can benefit from an unequalled output of highest performance active components including coaxial and planar gridded tubes. One source provides "in-house" ferrite know-how, critical testing experience and facilities, and full R&D back-up. Now, optimum integration of active devices in packaged circuits can help reduce design cycles, provide retrofit capabilities and lead to improved system performance with lower over-all cost.

CIRCULATORS AND ISOLATORS

GE coaxial, stripline circulators and isolators offer the systems manufacturer maximum design flexibility and assurance of systems-component compatibility and performance . . . in radar, electronic countermeasures, communications, aircraft control, fusing systems, signal generators, test equipment, and many other modern microwave systems. These small size units can typically handle 100 to 500 watts CW and more, and are capable of operating under severe environmental conditions. And continuing developments have produced units that will operate at peak powers of 5 kw in L and S Band. All frequencies from 0.3 to 5.5 GHz are covered, and typical bandwidth in these frequency ranges is approximately 20 percent with greater bandwidth available. Magnetically shielded and miniaturized units are available, with unique terminations and connections a specialty.

INDUSTRIAL AND SPECIAL-PURPOSE TUBES

General Electric offers an extensive line of reliability-proven industrial and special-purpose tubes including the following popular types: camera, ceramic, industrial and military cathode ray, communication, Five-Star, glow tubes, ignitrons, industrial receiving, rectifier, thyratrons, transmitting tubes and triggered vacuum gaps.

GENERAL ELECTRIC

HTV PHOTOMULTIPLIER TUBE

HTV Photomultiplier tubes are designed expressly for high current amplification of extra low levels of radiation in spectru ran from ultraviolet to near infrared regions. HTV Photomultiplier tubes feature the high sensitive measurement of low dark cu ent rapid response to pulsed light where high instrumentation performance is required. HTV provides incomparable wide-choice spe response, tube type, tube size and tube construction.

In continuous service with sensitive surface of cell fully illuminated. The dissipation allowed for cell is decreased with elevated ambient temperature, therefore, must not exceed one-fourth of its value of maximum rating at 60°C.

② At 25°C and specified voltage for each type. For continuous where the light source is a tungsten filament lamp operated at a color temperature of 2854°K. This characteristic is determined after the cell has been exposed for a period of 16 to 24 hours to about 500 lux illumination (white fluorescent light).

③..... Minimum values. Measured 60 seconds after removal of incident illumination level.

④..... The time required for the conductance to rise to 63.2 per cent of the maximum value or to fall from the peak to 36.8 per cent of the maximum value.

⑤..... γ is the slope of conductance as a function of illumination.

⑥..... Ambient temperature of all the types is ranged from -30°C to 60°C.

ELECTRO-OPTICAL TUBES

- **Pattern Recognition**
- **IR-UV Detection**
- **Image Dissection**
- **Storage Display**
- **Night Vision**

Systems design in the 1970's is being shaped now by the new electro-optical tubes and devices developed and produced at ITT Electron Tube Division. Super-sensitive image intensifiers for night vision, high-speed photography, and low-light-level TV. Image correlation tubes for pattern-recognition, fingerprint identification, voice-print matching. Image dissectors for high-resolution earth-mapping by TV satellite. Multi-color CRT's for air traffic display and medical electronics. Photomultipliers for laser detection and star-tracking. Electron multipliers for space research.

COMMUNICATIONS, INDUSTRIAL and MICROWAVE TUBES

- **Industrial Heating**
- **Navigation**
- **Broadcast**
- **Radar**

ITT Electron Tube Division is a foremost designer and manufacturer of broadcast and communications power tubes, and the world's largest supplier of hydrogen thyratrons. We invite you to follow the lead of the most demanding buyers of super-power triodes and tetrodes (to 40 megawatts peak), hydrogen thyratrons (to 125 megawatts peak), microwave TWT's (all power ranges plus a 2-second warmup cathode), and many more.

XENON HIGH-INTENSITY LAMPS

- **Military Searchlights**
- **Theatre Projection**
- **Stadium Lighting**
- **Solar Simulation**

ITT Electron Tube Division boasts of the finest facility in the U.S. for the design, production and testing of xenon lamps. These short-arc lamps, in power ranges of 1, 2.2, 20 and 30 KW, are now replacing the carbon-arc for many applications including theatre film projection and night-time illumination of large sports arenas. Close to daylight in color temperature, these extremely long-lived xenon lamps exhibit no shift in spectral or luminous output with aging.

BRIMAR

High Quality

MONITOR TUBES / RADAR TUBES / INSTRUMENT TUBES

o Valves and Tubes Limited is one of Britains largest manufacturers al cathode ray tubes. Examine a BRIMAR catalogue and you will find widest range of tubes, one of which is likely to be a perfect fit for rement. But if you have something unusual in mind it is probable that n make it.

CAPABILITIES

S — Fifteen different phosphors, from a very short persistence blue 2μs) to a very long persistence orange (25s).

AND EXTERNAL GRATICULES — Graticules applied to the inside surface ss screen are standard on all compass tubes. They can be supplied to ler on most other tubes. Advantages are the complete elimination of parallax error and protection from abrasive damage to the graticule. A less costly alternative, often used on large screen demonstration tubes, is the external graticule baked on the outside of the screen glass.

FLASHOVER PROTECTION — All tubes using a B8H base are fitted with the BRIMAR Sparkguard 'S' base which offers inexpensive circuit protection against flashover.

IMPLOSION PROTECTION — BRIMAR are Britain's leaders in CRT protection. Five different constructions are used on Industrial Cathode Ray Tubes.

Accessories offered for Brimar cathode ray tubes include sockets, connectors, yokes, focusing coils and twist coils. Substantial savings can be offered when Magnetic Shields and Tubes are purchased as assemblies. Also see EEM page 2600.

Detailed components catalog free . . . Write today on company letterhead

Tube sockets, insulators, pilot lights, and hardware–

Standard, industrial, military

Whatever the choice . . . steatite wafer, bayonet or low-loss Kel-F sockets for high power transmitting tubes . . . time and time again design and development engineers specify Johnson tube sockets! Sockets have been categorized under a socket standardization program, reducing the number of variations in each socket type. Standardization and immediately available stock shortens delivery cycles—permits fast selection of a Johnson socket for almost any application!

ULTRA HIGH FREQUENCY TYPES—Continuous heat resistance to 500° F. with low loss, glass filled silicone base and heat treated beryllium copper contacts. Low inductance screen by-pass capacitor available for VHF and UHF operation. For RCA 8072, 8121, 8122, 8462 and similar tubes.

KEL-F SERIES—Molded of low dielectric loss-factor Kel-F plastic—designed for use with a wide selection of high power transmitting tubes such as: 4X150A; 4X150D; 4X250B; 4CX250B; 4X250F,7034; 7035. Basic sockets are available in several designs—with or without screen grid by-pass capacitors, mounting saddles, or steatite chimney to direct air flow through tube cooling fins. Control grid contact "guide" is machined for greater alignment accuracy, and tapped for 6-32 machine screw. All contacts are low resistance silver-plated beryllium copper. Tube pin contacts are heat treated to provide positive contact pressure as well as extended life. Annealed soldering tabs may be easily bent or formed.

STEATITE WAFER TYPES—Available in 4, 5, 6, 7, and 8-pin standard socket types, as well as Super Jumbo 4-pin for tubes with E.I.A. Base Nos. A4-15, A4-16, and A4-18. Giant 5 and 7-pin models for tubes with E.I.A. Base Nos. A5-19 and A7-17. Septar Sockets for tubes such as the 7094 with E.I.A. Base No. E7-2; and VHF Septar Sockets for tubes such as 5894, 6524, 6252, with E.I.A. Base No. E7-20; and 826, 832, 4D32 and E.I.A. Base No. E7-2.

SPECIAL PURPOSE TYPES—Includes sockets for special purpose tubes such as the: 204A and 849; the 833 and 833A; 152TL; 304TL; 750TL; 1500T; 2-2000A; 5D21; 705A and others.

Note: For detailed specifications, request Socket Standardization Booklet 536 on your company letterhead.

Manufacturer of more than 5,000 items for all segments of the electronic industry, in addition to a wide line of connectors, tube sockets, and air variable capacitors, Johnson offers the hardware items described below: In addition a complete line of heavy-duty RF components is available for broadcast transmitting, RF heating, antenna phasing, and other commercial applications.

Equipment in this line includes: fixed and variable inductors; antenna phase sampling loops, isolation filter inductors; feed-thru bowl insulators; static drain chokes; RF contactors; and heavy-duty make-before-break switches. For information on the Johnson RF component line, write for Catalog 560a.

INSULATORS—Low loss, high-voltage breakdown in either steatite or porcelain. High quality with heavy nickel-plated brass hardware—suitable for exposed applications. A complete line for immediate delivery from stock includes: Thru-panel Bushings and Insulators; Antenna Strain and Feeder Types; Cone and Stand-off Insulators; Lead-in Bushings; and Feed-Thru Bowl Assemblies.

PILOT LIGHTS—Over 47 separate assemblies immediately available from parts distributors throughout the country for original equipment or in-the-field replacement. Continuous indication neon types; models for high and low voltage incandescent bulbs; standard or wide angle glass; and lucite jewels. New RIB-LOC pilot light offers convenient press mounting. Specials, including types meeting military specifications, also available in production quantities. Detailed specifications available on request.

PC SPACERS—Snap-in polyamide spacers provide rapid mounting of PC boards with choice of stand-off heights. **COAXIAL RECEPTACLES**—Convenient panel mounting. **PANEL BEARINGS**—For use on ¼" shafts and panels up to ⅜" thick. **CRYSTAL SOCKETS**—For low capacity, high voltage and high temperature operation. Glazed steatite. Grade L-423 or better. DC-200 impregnated. **RF CHOKES**—High quality construction. For 1.7 to 30 mc range and VHF.

MILLEN TUBE SOCKETS DESIGNED FOR APPLICATION

Long Flashover path to chassis permits use with transmitting tubes, 866 rectifiers, etc. Long leakage path between contacts. Contacts are type proven by hundreds of millions already in government, commercial and broadcast service, to be extremely dependable. Sockets may be mounted either with or without metal flange. Mounts in standard size chassis hole. All types have barrier between contacts and chassis. All but octal and crystal sockets also have barriers between individual contacts in addition.

Voltage regulator dual contact bayonet socket, 33991 black phenolic insulation and 33992 with low loss mica filled phenolic insulation.

MILLEN TUBE SOCKETS

No.	Description	No.	Description
33002	Crystal Socket ¾" x .125"	33004	4 Pin Tube Socket
33102	Crystal Socket .487" x .095"	33005	5 Pin Tube Socket
33202	Crystal Socket ½" x .125"		
33302	Crystal Socket .487" x .050"	33008	8 Pin Tube Socket
33407	Miniature Socket only, ceramic	33991	Socket for 991
33409	Noval Socket only, ceramic	33992	Socket for 991
33307	Miniature Socket, Shield, ceramic	33207	829 Socket
33309	Noval Socket, Shield, ceramic	33305	Acorn Socket

LE COUPLINGS — The No. 39000 series of Millen "De- for Application" flexible coupling units include, in addition to ed versions of the conventional types, also such exclusive l designs as the No. 39001 insulated universal joint and the 006 "slide-action" coupling (in both steatite and bakelite on). The No. 39006 "slide-action" coupling permits longi- shaft motion, eccentric shaft motion and out-of-line opera- s well as angular drive.

. 39005 and 39005-B (high torque) are similar to the No. but are not insulated. The steatite insulated No. 39001 has ial anti-backlash pivot and socket grip feature. All of the illustrated units are for ¼" shaft and are standard produc- pe units.

. 39016 incorporates features which have long been desired exible coupling. No Backlash — High Flexibility — Higher own Voltage — Smaller Diameter — Shorter Length —

IC PLATE OR GRID CAPS — Soldering lugs and contact one- Lug ears annealed and solder dipped to facilitate "mechanical oldered" connection of cable.

001—9/16" ..... No. 36002—⅜" ..... No. 36004—¼" .....

Y TERMINAL — Combination high voltage terminal and ushing. Tapered contact pin fits firmly into conical socket pro- large area, low resistance connection. Pin is swivel mounted to prevent twisting of lead wire.

001, Black or Red ..... No. 37501, Low loss .....

ITE TERMINAL STRIPS — Terminal and lug are one piece. re turret type and are free floating so as not to strain L522 ic on wide temperature variations. Easy to mount with series nd holes. 1400 volt and 3500 volt series.

, PLATES, AND PLUGS — The No. 37200 series, including insulated and non-insulated binding posts with associated and plugs, provide various combinations to meet most ements. The posts have captive heads and keyed mounting. o. 37291 on No. 37223 are standard in black or red with colors on special order. No. 37201, No. 37202, and No. are available in black, red, or low loss. The No. 37202 is vailable in steatite.

Description	No.	Description
—Single plates, pr.	37204	Double dual plates, pr.
—Single plates (tapered), pr.	37212	Dual plug
	37222	Non-insulated binding post
2—Dual plates, pr.	37223	Insulated binding post

LOCK — Compact, easy to mount, positive in action, does ter dial setting in operation! Rotation of knob "A" depresses "B" and "C" without imparting any rotary motion to Dial. hole mounted.

0050 .....

CLAMP — No. 33087 is easy to use, easy to install, effective ction. Available in special sizes for all types of tubes. Single nounting. Spring steel, cadmium plated.

JAMES MILLEN MFG. CO., INC.
IN OFFICE AND FACTORY 150 EXCHANGE ST., MALDEN, MASSACHUSETTS, U. S. A.

Penta LABORATORIES DIVISION OF KILOVAC

HIGH EFFICIENCY POWER TUBES

Because of their proven reliability, long life and high efficiency, Penta power tubes are specified by an ever increasing number of equipment manufacturers. More and more power tube users, too, now specify Penta tubes for replacements. Extra care in every step of production and test sures you of top performance and quality in each Penta power tube you buy.

ELECTRICAL SPECIFICATIONS

PL-5D22 (4-250A) Power Tetrode

Fil. Volts	Fil. Current Amps.	Plate Diss. Max. W.	Plate Volt. Max.	Plate Current Ma., Max.	Screen Voltage Max.	List Price
5.0	14.5	250	4,000	350	800	$ 4.50

Power tetrode, used in communications and amateur equipment. Can be used at full ratings up to 75 Mc. and with reduced ratings to 120 Mc. Unusually small amount of driving power normally required for specified value of power output. Useful as r-f power amplifier, or a-f amplifier and modulator.

PL-6775 Power Tetrode

Fil. Volts	Fil. Current Amps.	Plate Diss. Max. W.	Plate Volt. Max.	Plate Current Ma., Max.	Screen Voltage Max.	List Price
5.0	14.5	400	4,000	350	800	$ 5.00

Ruggedized power tetrode, unilaterally interchangeable with 4-400A. Can be mounted in any position, will withstand high levels of shock and vibration. Design minimizes possibility of inter-electrode shorts. One-piece plate seal and cap can't loosen, fall off, or easily break. Excellent in applications where high level of reliability is required.

PL-8438/4-400A Power Tetrode

Fil. Volts	Fil. Current Amps.	Plate Diss. Max. W.	Plate Volt. Max.	Plate Current Ma., Max.	Screen Voltage Max.	List Price
5.0	14.5	400	4,000	350	800	$ 4.00

Widly used power tetrode. Excellent as r-f amplifier and a-f amplifier and modulator. Penta unique ribbed-anode construction provides large effective plate radiating area, with minimum plate, screen-grid and control-grid temperatures.

PL-8295/172 Beam Pentode

Fil. Volts	Fil. Current Amps.	Plate Diss. Max. W.	Plate Volt. Max.	Plate Current Ma., Max.	Screen Voltage Max.	List Price
6.0	8.2	1000	3,000	1000	600	$15.00

1000-watt beam pentode. Provides high power gain and good efficiency at relatively low plate voltages. Cooled by forced air. Widely used as Class-AB_1 linear amplifier, delivering over 1500 watts useful power output. Also excellent for Class-AB_2, Class-B, and Class-C service.

Accessories

Type	Description	List Price
PL-184A	Socket for PL-8295/172 and PL-8295A, including the chimney. Suppressor-grid contacts are grounded.	$49.00
PL-265A	Sockets for PL-264. Includes chimney, screen-grid by-pass capacitors. Provides for correct distribution of air for proper tube cooling at full rated plate dissipation.	$53.00

Penta Laboratories, a name well known in the electronics industry for over 17 years, is now a division of KILOVAC, leading manufacturer of high voltage vacuum relays and capacitors.

Symbolray* Monoscope can generate almost any presentation you can think of — from ASCII to custom data displays and even hieroglyphics. We can meet your requirements with only an inexpensive change in target font design. A more economical method of generating displays than using circuit cards, Symbolray monoscopes cost less than $100 in quantities of 1,000. Only 2″ x 12″, Symbolray uses electrostatic deflection and focus. Full messages can be displayed when Symbolray method is used with buffer memory techniques. Monoscope is currently available with 64 and 96 character matrices. **Write for Bulletin SP-1178.**

More Than 2000 Optoelectronic Devices are available from Raytheon to improve your product, cut its cost. RAYSISTORS® operate on the principle of controlled light acting on a photo-resistive element — provide a variety of control functions as variable resistors, solid-state switches, relays, voltage or signal isolators. Standard And Special Raytheon Photocells feature rugged mechanical construction, small size, lightweight, low noise. They're available with cadmium sulfide or selenide sensors, TO-5 case or glass vial packaging. **Write for data and circuit applications brochure SP-1149 and SP-1150.**

e* Indicator Tubes — made in . S. A. — at lowest prices. For le: our CK 8754 costs less than in 1,000 lot quantities.

heon offers a complete line of nd end-view indicator tubes in a ange of alphanumerics, decimals, pecial characters. Turn-around e on all custom designs is fast eliable.

Datavue Indicator Tubes are EIA produced for 200,000 hours of ion, highly dependable tubes with brightness, in-line characters. **for Bulletin SP-1114.**

emark of Raytheon Company

New Keyboard Switches — an original Raytheon design — are low cost yet extremely reliable. Just a feather-light (2½-oz.) touch activates the switch which is designed for switching at logic levels. Life expectancy of the dry reed type is more than 800 million cycles. Bounce is less than 250 microseconds. Costs as low as $1.00 in production quantities. **Write for Bulletin MC182B.**

Complete, custom-made keyboards — using the switches described above — are also available from Raytheon. These keyboards can be designed, built and shipped to you in minimum lead time. All assemblies are supplied with alphanumerics, symbols and coding to your specifications. They are also available with data lines, electronic interlock, connector to external power sources and with or without case. **Write, describing your application, for data and assistance.**

For data sheets, application notes, price information, call your Raytheon regional sales office. Or write: Raytheon Company, Industrial Components Operation, 465 Centre Street, Quincy, Massachusetts 02169.

THE MOST COMPREHENSIVE LINE OF SOLID STATE CHOPPERS, RELAYS & ANALOG SWITCHES

MIL-E-5272

TYPICAL SIZE

microminiature	lightweight	low power	high speed	rugged	indefinitely long life
non-mechanical	inertialess	low level	high efficiency	linear	temperature stable

The transistor chopper (or modulator) is a solidly encapsulated unit designed to alternately connect and disconnect a load from a signal source. It may also be used as a demodulator to convert an a.c. signal to d.c It is capable of linearly switching or chopping voltages over a wide dynamic range which extends down to a fraction of a millivolt and up to 150 volts or more. Unlike mechanical choppers which can only be designed to operate over a narrow and comparatively low frequency range due to mechanical limitations, the transistorized chopper is an inertialess device that can be driven from d.c. to hundreds of kilocycles.

The switching circuitry used operates the transistors in a manner which provides stability and freedom from drift over a wide temperature range. Only carefully selected and matched transistors are utilized.

The Models 5, 6, 10, 20, 30, 33, 33P, 40, 40P, 50, 50P, 60, 60P, 70 and 70P are direct-coupled so as to provide the circuit designer with the most basic chopper from which to synthesize solutions to special circuit problems. The Models 33 and 33P are basic field-effect chopper-relays providing exceptional linearity, stability, low noise and offset. The Models 64, 65, 66, 75 and 150 are transformer-coupled for isolation purposes. The Model 50 is for high-level signals. The Models 64 and 66 are for operation from 400 cps and 60 cps sine wave drive at 115 volts a.c. The Models 80, 81, 90 and 91 VIBRACHOPPERS are unique since they require d.c. rather than a.c. contacts, even with d.c. drive. The Model TCD-101 Transistor Chopper Driver drive. The Model 98 has complete isolation and insulation between drive and provides suitable square wave drive voltages for transistorized choppers and synchronous demodulators.

These units are immune to the effects of shock and vibration making them ideal for military, space vehicle and portable applications; or where power conservation, miniaturization and elimination of maintenance are a necessity. Shipments can be same day if you call early.

VIBRATING CAPACITORS

A vibrating-reed type capacitance modulator used to measure currents as low as 10^{-16} amperes. Drift never exceeds ±0.2 millivolts per day, noncumulative. Thus it is ideal where stable performance without recalibration is required for periods of a month or more.

DC-AC CHOPPERS For 50/60/94/120 CPS

These miniature Choppers are outstanding. Long life is assured by our exclusive twin-contact construction. Noise level is less than 1 microvolt into 100,000 ohms with circuit capabilities of .01 microvolt. Packaged two ways, as shown. Built to rigid commercial specifications, there is a selection of types for all applications. Single pole, double pole, make-before-break, break-before-make, AC or DC drive.

MILLISEC RELAYS

Amazingly fast, from 200 microseconds to 1 millisecond. Available in both commercial and military models, single-pole and double-pole, with shielded or unshielded coils. They are factory sealed and may be mounted in any position.

Please write for Catalog 337

NEW

GETTING THE MOST FOR YOUR MONEY IN INSTRUMENT TRANSFORMERS

NANOTRAN ISOLATION TRANSFORMERS are different. They have 200 dB common mode rejection plus all features needed to minimize thermal noise and microphonics:

Frequently cut costs, say, 10%.
Frequently cut size, say, 30%.
Eliminate microphonics:

Please write for Catalog 589.

(Microphonics Test)

NANOTRAN OTHER

NEW

MICROLEVEL RELAYS

A new relay with exceptional characteristics for use where thermals, high speed, and long life are required. Offset 40 millivolts. Operating speed 250 microseconds. No bounce. Life 2 billion operations and up. Isolation 10^{11} ohms. Form C with electrical latching capabilities. Operates in any position; printed circuit board, socket, or flange mounting. Please write for Catalog 593.

Light weight insurance

Amalco multi-purpose aluminum carrying cases protect against dust, sprays, rust and vibration

Economical, light in weight, rugged, AMALCO Deep Drawn Aluminum Carrying Cases are ideal for hundreds of industrial uses including electronic instrument cases, precious mechanical instrument cases, scientific instruments, photographic equipment and more. Their sturdy seamless construction includes a tight neoprene gasket, protective chromate treatment inside, plated hinges and others. Eleven standard sizes available for immediate delivery. Special sizes to comply with MIL-C-4150F can be produced to your specifications.

The EQUIPTO ENCLOSURE SYSTEM

A Proven Concept thru Functional Design!

The Equipto Enclosure System represents the first new idea for housing electronic equipment and instrumentation since the introduction of modular cabinets almost fifteen years ago.

New and outstanding features make the Equipto Enclosure System the standard by which all others can be compared.

This System of Modular Cabinets is a proven concept, with emphasis on function and human engineering, designed by the engineers who originated the modular concept of cabinetry and built by men who are recognized authorities in this field.

LABORATORY TEST FURNITURE

FOR

INDUSTRIAL • MILITARY • SCHOOL

APPLICATIONS

Formica's sectional electronic test furniture is designed *by* engineers *for* engineers to provide the utmost in serviceability. Individual prefabricated sections are constructed to afford the greatest possible number of combinations, then factory assembled to suit the exact requirements of your laboratory or classroom. Design features also provide at least 50% more available working area over other types now in use. Made of heavy gauge furniture steel, Formica's rugged construction means many extra years of service even in hard use.

r school purposes, the usual adaptability of mica's many specialized rets and pedestals — ether for single or uble set-ups — is own in part.

Write for brochures and further specifications.

FORMICA METAL PRODUCTS COMPANY, INC.

CORPORATION WAY • MEDFORD, MASSACHUSETTS 02155

We discovered how to make our cabinets extra strong without adding extra weight.

That's how Honeywell helps you build extra value into packaged systems.

Exclusive geometric design keeps frame members rigid.

We start with rugged 14-gage steel. Form it to a unique design. Assemble frames with sigma-arc welding. Add sturdy 16-gage panels.

The result is our new Series 40 MODU-MOUNT Cabinets. Enclosures that hold heavyweight components securely, while adding little weight of their own.

The quality of these cabinets is most obvious in the finished package. Frames won't sag, won't twist. Doors don't stick; drawers don't bind. The total appearance speaks well for the precision of its contents.

Beyond strength, these MODU-MOUNT cabinets offer other attractive features. Increased interior widths and depths for easier installation. Thorough corrosion protection. Acid and scuff resistant finish of textured vinyl polyester enamel. All in a complete range of frames, panels, drawers and accessories.

For facts, call your nearest Honeywell Industrial Sales Manager, or write to: Honeywell, MODU-MOUNT Cabinets, Wabash, Indiana 46992

OMNICLOSURE™

THESE ARE A FEW OF THE 4.5×10^7 CONFIGURATIONS THAT ASSEMBLE FROM OMNICLOSURE KITS AND PARTS STOCKED FOR IMMEDIATE DELIVERY ANYWHERE

FAB RACK-MOUNTING CHASSIS KITS AND PARTS

he original prefabricated chassis system. Combines bread-oard flexibility, finished-product appearance, moderate rices, and immediate availability. Kits and parts stocked six EIA heights. Features include choice of sliding or crew-down cover, and the Erector Set concept, which per-its parts to be assembled in hundreds of different ways.

CARD CAGE SUB-KITS

Omniclosure rack-mounting and convertible chassis kits may be ordered with one, two or three row card cage sub-kits included. They assemble for top, front or rear access. Plastic snap-in guides eliminate time-consuming threading of guides and spacers, and permit changes to be made without disassembling the cage.

NVERTIBLE BENCH/RACK KITS AND PARTS

imilar to rack-mount units but self-enclosed and furnished ith panel ears which detach for bench use and wrap-round cover which is removed when chassis is to be rack-nounted. Available with many options.

PORTABLE INSTRUMENT CABINET

Designed by Milton Sol Weiss — IDSA

CLEAN, MODERN LOOK—Precision-framed front panel; no visible hardware on top, sides or front; choice of wood-grained vinyl trim; all aluminum clear anodized. BROAD RANGE OF SIZES—Eighteen stock sizes immediately available. ALL-ALUMINUM MODULAR CONSTRUCTION—Front, rear and sides are heavy extrusions. Sides grooved internally to accept printed circuit boards.

Vector PACKAGING SYSTEM FOR CARDS AND MODULES

VECTOR STRUT CAGES

Vector Strut Cages are uniquely adjustable aluminum frames des for mounting in 19" equipment racks which accommodate "EFP" ules shown below, or cards. Vector Strut Cages are sold in kit fo three heights, 3-15/32", 5-7/32", 8-23/32", and three depths, 8.9 11.975", and 15.725". Kits consist of the side walls, cross me (Triple T Struts) and brackets, plus necessary assembly hardware truded aluminum card and case guides, EFP Modules, and handle ordered separately as required.

Ordering Information
CMK-3 General Purpose Module Cage Kit 5-1/4" high with 9" long walls for 19" rack mounting.
Sub-Kit No. 7—Kit of case guides and mounting hardware to moun 2" wide EFP Modules in CMK-3 Cage above.
Sub-Kit No. 4—Kit of case guides and mounting hardware to mount ten 1.6" EFP Modules in CMK-3 Cage above.

Completely Assembled Module Cages
CMA-3-20 completely assembled cage consisting of all parts supplied in CM and Sub-Kit 7 above. (Modules must be ordered separately.)
CMA-3-16 completely assembled cage with guides installed for ten 1.6" wi EFP modules. (Modules must be ordered separately.)

Many other sizes and types available from stock. Contact factory.

VECTOR "EFP" (EXTENDED FRONT PANEL) CASES

Vector "EFP" aluminum module cases are made in many sizes to accommodate circuit boards from 2.7" to 7.9" wide and 4.6" to 14" long. All EFP cases will fit Vector Strut Cages. EFP cases have identical top and bottom extruded rails with parallel .062" longitudinal grooves spaced for holding circuit boards, slide out .062" side covers front and rear panels. Captive thumb screws are provided. Order EFP204-6.6 for 2" wide completely enclosed module to accommodate 4.5" x 6.5" Card sizes. Contact factory for many other sizes and also types for H. F. shielding available from stock.

MULTI-MOD CASES

Versatile Multi-Mod Cases can used for small instruments and cuit packaging where appeara and utility are important. Slo inner surfaces on four sides h circuit cards or mounting pla eliminating unsightly screws in c exterior. Access is easy by rem ing base plate. Available in ext sion widths of 1", 1.6", 2", and 4.5" lengths from 3.1" to 1 heights from 3.1" to 8".

Ordering Information
W20-46-31, 2"x4.6"x3.1" case accommodate 3"x4.5" cards. W 66-46, 3"x6.6"x4.5" case acco modates 4.5"x6.5" cards. Mo other sizes available in stock.

NEW *Fast, Simple and Economical* COMPLETE PACKAGING SYSTEMS *From* VERO

VERO INTRODUCES THE ULTIMATE PC CARD FRAMES • VERORACK SYSTEM 3

VERORACK SYSTEM 3

The ultimate PC card frame featuring variable card spacing from .4" up. This rack combines beauty, strength and durability. Connector mounting is unique and the cost is low.

VERO MODULE CASES

A line of Portable Module Cases has been designed for use in conjunction with standard modules from the Vero Module Rack. The cases are available in three heights, 5¼", 7" and 8¾" and in four standard widths, 4", 6", 8" and 16". Guides are included for Single or Multiple Module Mounting.

VERO MODULE RACK

OVER 450 ASSEMBLY COMBINATIONS — DELIVERY FROM STOCK — GREATEST FLEXIBILITY AT LOWEST COST

The Vero Module Assembly — another phase of the Vero circuit concept — provides a fast, simple and inexpensive method of circuit packaging.

The Vero principle of versatile standardization has produced a module which fits standard 19" racks and can contain any combinations of 1", 2", 4", 8" or 16" pull out modules. It is available in 5¼", 7" or 8¾" heights and 11" or 14" depths.

This rugged ⅛" aluminum units is also available as a composite of modules and printed circuit cards for the ultimate in flexible circuit assembly.

VEROBOARD*

Hole Patterns — .050 x .050, .1 x .1, .150 x .150, .156 x .1, .2 x .2, .2 x .1.

Over 200 Standard Sizes — Single and Double Sided x-y pattern.

Material — XXXP and FR-4 Epoxy Glass.

*Patented.

VERORACK SYSTEM 3

Features standard .5" card spacing with noryl guide slabs that slide with precision extrusions. This rack is versatile, rigid and low in assembly cost. It accepts cards any length and up to 4½" high in 5¼" frame. Other frame heights are also available.

VERO INSTRUMENT CASE

An attractive new range of instrument cases available in heights from 3½" to 1[illegible]" to accept 9" wide racks. Sturdy construction and functional design are featured.

VERO D.I.P. BOARD

FOR DUAL IN-LINE I.C. PACKAGES

- .1 x .1 hole pattern with .041 dia. holes
- Accepts D.I.P. socket or direct I.C. plug in
- Gold plated contacts with connectors to match
- Boards available in epoxy glass 1/16 thick or low cost paper
- Complete versatility with continuous isolated pads on [illegible] centers holds 20 D.I.P.s on 4.5 x 6.5 board
- Power and ground buss plus test points all on one side [illegible] board
- Reverse side printed with grid to ease component locati[illegible]
- Vero handle location indicated

VERO "FINGER BOARDS"

Hole Patterns — .1 x .1, .052 dia.

Material — 1/16 Epoxy Glass, FR-4.

Connector Fingers — 22 x .156, 44 x .156, 40 x .1, 32 x .1, 80 x .1.

OFF THE SHELF IN SIZES TO FIT ALL CARD FILE SYSTEMS

COMPLETE RANGE OF CONNECTORS, TERMINAL PINS, MODULE CASES AND ACCESSORIES. BASIC VERO SYSTEMS CAN BE QUICKLY MODIFIED TO MEET CUSTOMER REQUIREMENTS.

ATC UHF/MICROWAVE PORCELAIN

ATC UHF/MICROWAVE CHIP CAPACITORS

ATC-100 UHF/MICROWAVE PORCELAIN CHIP CAPACITORS

ATC Microwave Porcelain Capacitors are designed to advance the state-of-the-art in broadband, high power and low noise applications. Unique construction techniques provide ultra-high unloaded-Q (10,000 at 100 MHz in a 10 PF unit), with loss tangents lower than 0.0001, and self-resonance up to 15 GHz depending upon capacitor value and case type.

ATC 100 porcelain material exhibits no instability with voltage, time or frequency, contrary to common NPO and high dielectric-constant ceramics. There is no measurable piezoelectric effect, no aging, and no retrace hysteresis, or drift. Close tolerances of 1%, or better, are available, and unlike NPO's ATC Microwave porcelain retains a high insulation resistance at high temperatures. This material is specifically designed for use at high RF voltage and current all the way up through microwave frequencies. ATC-100 Case B is recommended for use up to 1 GHz, above which ATC-100 Case A is recommended.

Superior metallization, which prevents leaching off by soft or solders, or epoxies, provides durable terminations under adverse soldering conditions. Other noble metals also available for special mounting, are with eutectics, or wire bonding. Special construction techniques provide extremely high packaging density with high reliability and high working voltage. Units are completely hermetically sealed by virtue of their basic construction, thus eliminating need for any encapsulant. Microwave porcelain is an extremely dense, low-loss material, impervious to penetration by atmospheric conditions or solvents. Exceptionally low inductance gives reliable wideband operation as a capacitor up to X-Band in capacitance values as large as 20 pF. Exceptionally close control over physical construction makes possible very high RF or DC voltage levels, plus low-loss, high power capability.

CHARACTERISTICS

UHF/MICROWAVE

INSERTION LOSS: Less than 0.03 dB @ 10 watts @ 1 GHz
QUALITY FACTORS: (Qu) Greater than 10,000 @ 100 MHz (10 PF)
GUARANTEED MINIMUM QUALITY FACTOR: @ 1 MHz = 10,000
SELF-RESONANT FREQUENCY: DC up to 20 GHz
VSWR: CASE B — 1.05:1 for typical non-ceramic substrate
CASE A — 1.1:1 for 25 Mil thick alumina substrates

S-PARAMETERS
Complete S-Parameter, VSWR, and Insertion Loss data is available, upon request, from 100 MHz through 1 GHz. Test data provided by a Hewlett Packard 8542A, computer controlled, synthesizer-referenced, phased-locked, network analyzer.

ELECTRICAL

TEMPERATURE RANGE: From —55°C to 125°C (no derating of working voltages)
From 125°C to 200°C derate linearly to 50% @ 200°C
TEMPERATURE COEFFICIENT OF CAPACITY: + 90 ± 20 PPM/°C (—55°C to 125°C) @ 1 MHz
CAPACITY RANGE, INSULATION RESISTANCE, AND OPERATING VOLTAGE (WVDC) BY CASE SIZE
CASE A: .1 PF to 100 PF (50 WVDC);
10^6 Megohms Min @ 25°C, 10^5 Megohms Min @ 125°C
CASE B: .1 PF to 47 PF (1000 WVDC)*;
10^6 Megohms Min @ 25°C, 10^5 Megohms Min @ 125°C
.1 PF to 100 PF (500 WVDC);
10^6 Megohms Min @ 25°C, 10^5 Megohms Min @ 125°C
110 PF to 200 PF (300 WVDC);
10^6 Megohms Min @ 25°C, 10^5 Megohms Min @ 125°C
220 PF to 470 PF (200 WVDC);
10^6 Megohms Min @ 25°C, 10^5 Megohms Min @ 125°C
510 PF to 1000 PF (100 WVDC)
10^5 Megohms Min @ 25°C, 10^4 Megohms Min @ 125°C

DIELECTRIC TEST VOLTAGE: All units tested at 250% of WVDC for 5 secs.
RETRACE: Less than 0.1%
PIEZO ELECTRIC EFFECTS: None

ATC-700 ULTRA-STABLE CERAMIC CHIP CAPACITORS

ATC ultra-stable NPO ceramic is rated for extremely high stability with temperature (TC = 0 ± 30 PPM/°C). Environmental resistance approaches that of porcelain types, even without encapsulation. Composition and construction techniques provide moderately high Q at moderate cost. Especially useful for low frequency tuned circuits where high stability with temperature is required. Practical for low power handling (less than 2 watts) where X°c is less than 1. Ohm max. ATC-700 is 1/10 the size of conventional NPO capacitors of equivalent capacitance and voltage ratings.

ELECTRICAL

CAPACITY RANGE BY CASE SIZE: CASE A, 47 PF to 470 PF; **CASE B,** 200 PF to 4700 PF
TEMPERATURE COEFFICIENT OF CAPACITY: 0 ± 30 PPM/°C (—55°C to 125°C)
QUALITY FACTOR: 2000 @ 1 KHz
INSULATION RESISTANCE: 10^5 megohms min @ 25°C

ATC-200 HIGH PACKAGING DENSITY CERAMIC CHIP CAPACITORS

ATC-200 UHF ceramic is designed for by-passing applications where high packaging density is required with good insulation resistance, environmental resistance, and moderate temperature stability. Suitable for use through UHF frequencies in low power, DC block, applications.

ELECTRICAL

CAPACITY RANGE BY CASE SIZE: CASE A, 470 PF to .01 MF
CASE B, 4700 PF to .1 MF
TEMPERATURE COEFFICIENT OF CAPACITY: (BX) ± 15% max. (—55°C to 125°C)
DISSIPATION FACTOR: 2.5% max @ 1 KHz
INSULATION RESISTANCE: 10,000 Megohms min
DIELECTRIC TEST VOLTAGE: 3 x Rated for 5 secs.

ATC-300 ULTRA-HIGH PACKAGING DENSITY CERAMIC CHIP CAPACITORS

The ATC-300 Series is designed to attain extremely high values of capacity in a minimal case size for use over a moderate temperature range. Values to .1 MF in a 50 Mil square (CASE A), and 1 MF in a 110 Mil square (CASE B) are standard.

ELECTRICAL

CAPACITY RANGE BY CASE SIZE: CASE A, .012 MF to .1 MF
CASE B, .1 MF to 1.0 MF
TEMPERATURE COEFFICIENT OF CAPACITY: Room temperature peak
DISSIPATION FACTOR: 4% max @ 1 KHz
INSULATION RESISTANCE: 1000 megohms min
DIELECTRIC TEST VOLTAGE: 3 x Rated for 5 secs.

FOR COMPLETE DATA FOR ALL SERIES SEE ATC 69/70 CATALOG

ND CERAMIC CHIP CAPACITORS

ERING CODE

ATC-100 B 10 1 J C

- C — Chip
- J — Tolerance
- 1 — Number of Zeros Following Digits Of Capacitance
- 10 — o Digits Of Capacitance
- B — Type
- ATC-100 — Series

THE ABOVE EXAMPLE DESIGNATES ATC-100 SERIES CASE B CHIP CAPACITOR OF 100 PF WITH A 5% TOLERANCE.

POWER HANDLING

/ at 3 GHz in an ATC-100 CASE B 62 PF.

res CW at 25 MHz in an ATC-100 CASE B 1000 PF.

n an ATC-100 CASE B, 30 PF unit @ 170 MHz.

res of pulsed RF at 500 MHz.

ften less than 1.1:1 and Insertion Loss .05 dB up to GHz in an ATC-100 CASE A 33 PF capacitor on 25 mil mina substrate with a 25 mil wide line.

series RF resistance of .05 ohms (compared to Barium types which may have up to 2.0 ohms for the same nce value).

ESULTS IN EXTRAORDINARILY LOW INSERTION LOSS, IS ESPECIALLY CRITICAL WHERE IMPEDANCES TO BE D ARE LOW, SUCH AS THE BASE-TO-EMITTER JUNCTION FREQUENCIES WHERE TRANSISTOR GAINS ARE LOW SS CANNOT BE TOLERATED.

ICAL

Y SPECIFICATION: All ATC-100 capacitors meet MIL-C-272B (Complete independent Test Data sent upon quest.)

TANCE DRIFT: 0.05% or 0.05 PF, whichever is greater None

ICAL CHARACTERISTICS AFTER LIFE TEST

E IN CAPACITANCE: At 25°C —0.1% max

Y FACTOR: Greater than 10,000 @ 1 MHz

TION RESISTANCE: 1,000,000 megohms min @ 25°C, 0,000 megohms min @ 125°C (for 100 WVDC units, 10^5 eg Ω @ 25°C, and 10^4 Meg Ω @ 125°C)

ANCES AVAILABLE:

(± .1 PF) from .1 PF to 9.1 PF,
(± .25 PF) from .3 PF to
(± .5 PF) from .5 PF to 5.1 PF,
(± 1%) from 10 PF to 1000 PF,
(± 2%) from 10 PF to 1000 PF,
± 5%) and K (± 10%) from 5.6 PF to 1000 PF,
(± 20%) from 6.8 PF to 1000 PF

APPLICATIONS

PRODUCT

Phased-array radar, wide-band amplifiers, low noise circuits, receiver RF-IF stages, proximity fuses, radiosonde, microwave power sources, UHF converters, military communications, telemetry, UHF mobile, ECM, DME, microwave power amplifiers, troposcatter communications; commercial aircraft communications; military, marine, and amateur AM/FM/SSB, military hand-held survival radios.

CIRCUIT

Constant-capacitance matching and coupling in octave bandwidth microstrip and stripline L and S-Band amplifiers, swept L.O.'s, mixers, synthesizers, and switches.

Low-loss signal paths for low noise receivers.

Coupling and by-passing for low and high power UHF transmitters.

Excellent first base-shunt elements in low-pass Matthaei wideband interstages.

Utilization in base and emitter by-passing, as well as coupling applications, where extremely low inductance is required.

Applications in ultra-stable oscillator sources where absolute retrace and minimal drift (less than .1%), as well as low inductance, are an important factor, particularly over environmental extremes.

Use in RF tank circuits where high circulating currents or where stability and Q are important factors. Use in timing and control circuits demanding high stability under extreme environmental conditions.

High Q DC blocks in wideband varactor-tuned sweepers.

Compact stable elements for use in low-distortion and narrow pulse width, high PRF delay lines.

Low and high values of capacity where close tolerances and high stability are required in HF and VHF filter design. (See ATC-100 Capacity Values)

Single-replacement for multiple-capacitor collector and base by-passes.

Pellet styles for input-matching and pseudo-idler circuits of high-ratio step-recovery multipliers.

Where state-of-the-art high Q capacity -vs-size microminiaturization is required.

CTRIC TEST VOLTAGE: 3 x Rated 5 secs.

ING VOLTAGE: 50 WVDC

RANCES AVAILABLE: F (± 1%), G (± 2%), J (± 5%), K (±10%), M (± 20%)

GENERAL

Similar to ATC-100, except for restriction to power levels and lower frequency applications where higher loss can be tolerated. Not to be used at low impedance levels having high current, or where low noise, low loss, or low power dissipation is required.

KING VOLTAGE: 50 WVDC

METRIC EFFICIENCY: 100 MFDS/Cu. inch

RANCES AVAILABLE: K (10%), M (20%), N (30%), GMV (—20%, +80%)

MMENDED TESTING SEQUENCE: CAP., DF., IR., V.D.C.

TARY SPECIFICATION: Meets applicable portions of MIL-C-11015D

GENERAL

Coupling and by-passing for low power, UHF transmitters and receivers. Applications requiring low inductance, high capacity per unit volume with moderate temperature stability, such as tantalum replacements and emitter by-passes.

CIRCUIT

RF by-pass for C_{ob} cancelling inductor.

KING VOLTAGE: 25 WVDC

MMENDED OPERATING RANGE: 10°C to 60°C

METRIC EFFICIENCY: 1000 MFDS/Cu. inch

RANCES AVAILABLE: M (± 20%), N (± 30%), GMV (—20%, +80%

MMENDED TESTING SEQUENCE: CAP., DF., IR., V.D.C.

GENERAL

Similar to ATC-200, except for use over a moderate temperature range such as encountered in computers, heart pacers, medical electronics, etc.

Amperex ELECTROLYTIC Capacitors

Amperex high quality, low cost electrolytic capacitors e small size, high capacitance and long service life. Lo leakage currents are achieved through the use of hi purified materials and carefully controlled manufacti processes. They are the "dry" type with the liquid electrolyte absorbed into a layer of paper between ca and anode foils. Winding is sealed in an aluminum ca

They are designed to operate at varied efficiencies ove temperature range of −40°C to +85°C. The minim maximum temperatures depend on the application . . increase of impedance and losses are the limiting fac

Amperex FIXED-FILM DIELECTRIC Capacitors

LIZED POLYCARBONATE

lic polycarbonate capacitors offer 125°C operation no oltage de-rating, extreme capacitance stability with ere, and low dissipation factor. High insulation lar coupled with small physical size make these oit ideally suited for the most critical applications. ab in 100 VDC, 400 VDC, and 630 VDC.

METALLIZED POLYESTER

Available in 250 VDC rating from .001 mfd to 2.2 mfd. Offer small size and cost advantages and are suitable for all general purpose applications.

C280 SERIES

The mperex C280 Series Flat Film Capacitors are intended for e with printed circuit wiring and are suitable for ub s well as transistorized circuitry. These capacitors re ailable in three voltage ratings: 250 VDC, 400 VDC, nd 30 VDC. Short-time overloading is permited with these co nents. Cap. Tol. ±10% or ±20%.

Die trics used with each voltage series are: 25 — metallized polyester; 400V — metallized po rbonate; 630V — metallized polycarbonate.

ype	Voltage	Dielectric	Capacitance Range	Thickness	Width	Height
80AE	250V	metallized polyester	0.01 μf to 2.2 μf	0.157 to 0.512	0.492 to 1.18	0.443 to 0.886
80CF	400V	metallized polycarbonate	0.01 μf to 1.0 μf	0.157 to 0.512	0.492 to 1.18	0.433 to 0.906
80CG	630V	metallized polycarbonate	0.01 μf to 0.47 μf	0.177 to 0.532	0.492 to 1.18	0.453 to 0.925

C280M SERIES

Am erex metallized film capacitors are designed for tube or tra istor printed circuit applications. Their flat rectangular sh e ensures stable mounting on printed circuit boards. Th size of these capacitors makes them extremely us l in the miniaturized components field.

Th e capacitors are available in four voltage ratings: 10 VDC, 250 VDC, 400 VDC, and 630 VDC.

M llized polyester is the dielectric used with the 250 volt se s, while metallized polycarbonate is used in the 1 400, and 630 volt series.

Th r technical characteristics are visibly marked on top of th capacitor's body in durable embossed printing.

ype	Voltage (VDC)	Dielectric	Capacitance Range (μf)	DIMENSIONS IN INCHES

C281 SERIES

Th s new compact capacitor offers a superior film quality in very respect and is used to replace paper capacitors in qu lity equipment. They can withstand overload and are in ensitive to adverse environmental conditions.

Th Amperex C281 series was designed primarily for use as ge eral purpose capacitors in the entertainment and in ustrial field. In addition, their high permissible AC vo tages make them ideally suitable as an anti-interference ca acitor in small electrical appliances. Their rectangular sh pe ensures wobble-free mounting on PC boards in ei her the vertical or horizontal position.

AILABLE TYPES

Type No.	Voltage	Dielectric	Capacitance Range	Cap. Tol.	DIMENSIONS IN INCHES		
					Length	Width	Height

Amperex Variable Capacitors

FILM DIELECTRIC TRIMMERS

CO10 and HT10 Series

Amperex Film Dielectric Trimmers are state-of-the-art with regard to dielectrics used and construction. The excellent characteristics of polyethylene and PTFE films now also are available for trimmer applications. A few advantages of Film Dielectric Trimmers are:

- excellent adjustment accuracy
- limited program covers wide trimming range
- new constructional concept achieves attractive dimensions with corresponding space savings
- reduced cost

Technical Specifications

STYLE CO10 — POLYETHYLENE DIELECTRIC			
Description	CO10KA/10E	CO10KA/20E	CO10MA/60E
Capacitance swing	>10pf	>20pf	>60pf
Zero capacitance	<2pf	<2pf	<5.5pf

Capacitance swing	>9pf	>18pf	>50pf
Zero capacitance	<2pf	<2pf	<5pf
Temp. coefficient/deg C	(−400 ± 300) .10-6	(−400 ± 300) .10-6	(−500 ± 200) .10-6
Temperature range	−40 to +125°C		
Working voltage	100 VDC		

2222 — 809 — 050/070 Series

These capacitors have been designed for us in miniaturized measuring and telecommun cation equipment. Four types are available single-stator (6 x 8 mm), single-stator (11 x 1 mm), split-stator (11 x 14 mm), and differentia trimmers (11 x 14 mm). Single-stator trimmer are suitable for fine adjustment of h.f. tune circuits, split-stator trimmers for symmetri cally built h.f. circuits, and differential type for capacitive volume or voltage control.

Technical Specifications

TUBULAR CERAMIC TRIMMERS

2222 — 802 — 20011/15 Series

These capacitors have been designed for the precision trimming of industrial equipment which operates at the higher frequencies. Their simple form of construction guarantees high reliability and facilitates, moreover, a high breakdown voltage, good stability and high adjustment accuracy. For many applications the negative temperature coefficient characteristics results in adequate compensation at various temperatures. The small dimensions contribute to the miniaturization of electronic equipment.

Technical Specifications

Catalog Number 2222 802	Capacitance Swing (pF)	Zero Capacitance (pF)	Temp. Coeff. (10-6/°C)	Working Voltage
20011	≥ 3	≤0.5	− 10 ± 60	500 VDC
20012	≥4.5	≤0.6	− 10 ± 60	500 VDC
20013	≥ 6	≤0.7	− 10 ± 60	500 VDC
20014	≥ 9	≤0.9	−250 ± 250	500 VDC
20015	≥ 12	≤1.0	−250 ± 250	500 VDC

C004 Series

Specifically designed for UHF applications in radio and TV receivers. Their negative temperature coefficient provides a favorable compensation at varying temperature conditions. Excellent quality level is maintained by a high degree of production mechanization. Available in three standard and one miniature dimension style which provide economical means of meeting the most accepted mounting techniques used in the radio and TV industry. The basic trimmer design consists of an internally-ground ceramic tube matched to a threaded invar rotor spindle; both ends are slotted for screwdriver adjustment.

Technical Specifications

1. Standard Dimension Styles
   Capacitance Range: 3 pf to 12 pf
   Temp. Coef.: −200 ± 200 PPM/deeC
   Working Voltage: 500 VDC
2. Miniature Dimension Style
   Capacitance Range: 3 pf and 6 pf
   Temp. Coef.: −200 ± 200 PPM/°C (3pf) to −300 ± 200 PPM/°C (6pf)
   Working Voltage: 400 VDC

2222 — 802 — 20001/5 Series

These capacitors have been designed fo the precision trimming of industrial equip ment which operate at the higher frequen cies. Their simple form of constructio guarantees high reliability and facilitates moreover, a high breakdown voltage, goo stability and high adjustment accuracy. Fo many applications the negative tempera ture coefficient characteristic results in adequate compensation of various temperatures. The small dimensions contribute to the miniaturization of electronic equipment.

Technical Specifications

Cat. No. 2222 802...	Capacitance Swing (pF)	Zero Capacitance (pF)	Working Voltage	Temp. Coefficient/°C

AMPLIFILM★ HIGH VOLTAGE CAPACITORS 2,500 to 60,000 VDC

IDUSTRIAL•MILITARY•COMMERCIAL

e CAPITRON★ Division of AMP Incorporated s specialized in the development of a diversified e of high voltage capacitors that provide out- anding performance characteristics. AMPLI- LM dielectric capacitors feature monolithic con- ruction which results in substantial size and weight reduction, making them particularly suitable for use in high voltage power supplies, modulators, pulse forming networks, etc. AMPLIFILM capacitors, custom or stock, are designed to your exacting requirements as to size, shape and performance.

AMPLIFILM★

ER CAPACITORS FOR TEMPERATURES TO 125° C

he basic element in these capacitors is AMP's AM IFILM dielectric, interleaved with copper foils and bo d with a non-polar thermoplastic resin specially se ed for its excellent dielectric qualities. Heavy gage fo nd molded construction combine to make these co onents ideal for rugged high voltage oil-filled or en sulated assemblies.

- erating temperature: −55° C to +125° C
- pacitance range: 100 μμf to 1.0 μf
- tage range: 2,500 to 60,000 volts DC
- wer factor: 0.5% max.
- gh insulation resistance
- nforms to MIL-C-19978 where applicable
- isture resistant
- ry low dielectric absorption: less than 0.2%
- fer sizes from 1 sq. in. to 36 sq. in.
- ny configurations available

A typical AMPLIFILM capacitor assembly. Even **before encapsulation,** the exclusive dielectric construction provides moisture resistance meeting MIL-STD-202 (Method 106), making possible an energy efficiency greater than 0.6 joules per cubic inch without the encumbrance of a metal case.

- Capacitance: 0.1 μf ± 5%
- Voltage rating: 40,000 volts DC
- Power factor: 0.5% max.
- Temperature Range: −55° C to +100° C
- Size: 4½" x 4½" x 6½" max. (exclusive of frame)
- Weight: 9½ lbs. (exclusive of frame)

CUSTOM-PACKAGED AMPLIFILM HIGH VOLTAGE CAPACITORS

Hermetically sealed, oil-filled, metal cased capacitors.

Epoxy encapsulated capacitors.

Configuration variety of AMPLIFILM ★ wafers.

ARCO ELECTRONICS

precision polystyrene capacitors

for military applications and hostile environments

type PT, CT and ST tubular

type PB, CB and SB rectangular bathtub cans

hermetically-sealed — metal case

Design innovations and extreme care in production have enabled ARCO to approach the optimum performance characteristics of the polystyrene film. These capacitors will exceed all performance requirements of MIL-C-19978 under ALL ENVIRONMENTAL CONDITIONS specified therein. ARCO polystyrene capacitors were specifically designed for the most critical applications where requirements for extremely high insulation resistance, high Q, extraordinary stability, close tolerance, and low dielectric absorption and dissipation factor are mandatory. These capacitors are intended primarily for use in ANALOG and DIGITAL COMPUTERS, CALCULATORS, HIGH Q TUNED CIRCUITS, INTEGRATORS, PRECISION FILTER CIRCUITS, PULSE NETWORKS, SERVO SYSTEMS, and as REFERENCE CAPACITORS.

specifications

DISSIPATION FACTOR: When measured at or referred to 1kHz the dissipation factor shall not exceed the following
.0001 at 23°C
.0002 at 85°C

INSULATION RESISTANCE: Insulation resistance when measured at the applicable test temperature, shall equal or exceed the following values

	23°C	*85°C
megohm x mfd	10^6	1.5×10^5
except the insulation resistance in megohms need not exceed	10^8	10^6

*NOTE: verified on 100% of production

DIELECTRIC ABSORPTION: When tested in accordance with paragraph 4.6.15 of MIL-C-19978, the dielectric absorption shall not exceed 0.05% over the entire operating temperature range.

OPERATING TEMPERATURE RANGE: The ARCO capacitor types listed can be used for continuous operation from −55°C to +85°C without derating. Transient exposure to +95°C will have NO DELETERIOUS effect.

TEMPERATURE COEFFICIENT: The following temperature coefficient variants are available—
Type PT & PB negative 120 ±15 PPM/°C
Type ST & SB negative 120 ±15 PPM/°C
Type CT & CB negative 175 ±15 PPM/°C

STABILITY: Long term (1 year) capacitance drift under maximum operating conditions shall not exceed the following limits for the types listed.
Type PT & PB ±0.1%
Type CT & CB ±0.1%
Type ST & SB ±0.05%

VOLTAGE RATING: All ARCO capacitors are available in 100, 200, 300, 600 and 1,000 Volts DC ratings. Special voltages can be supplied upon request or to specification.

CAPACITANCE TOLERANCE: ARCO specializes in precision capacitors. Available from standard production are tolerances of ±10%, ±5%, ±3%, ±2%, ±1%, ±½%, ±¼%, ±0.1%.

BURN-IN: All ARCO capacitors are subjected to a minimum of two 16 hour burn-in periods with 300% of rated voltage applied at 85°C.

CONSTRUCTION: All ARCO precision polystyrene capacitor types here listed are hermetically sealed in metal cases with compression glass-to-metal, solder-sealed terminals. They are wound with a SOLID CORE in the center for optimum stability, and are terminated with a disc lead assembly soldered directly to the extended foil for a completely NON-INDUCTIVE construction resulting in the lowest possible contact resistance and exhibiting complete FREEDOM FROM MICROPHONISM.

precision polystyrene capacitors

superior environmental protection at low cost—smallest size

type PC & PJ tubular
type SC & SJ tubular

The unique design of Arco Type PC capacitors provides physical and electrical stability, ruggedness and strength of termination, and excellent uniformity in production. All these features enable tight control of the narrow specification limits published. Type PC offers the smallest, lowest cost construction available, while retaining optimum performance characteristics.

The Type PC enclosure provides unusual protection against moisture, solvents and inadvertent contact with a soldering iron. The rugged, heat resistant jacket material makes Type PC particularly suited to printed circuit dip-solder assemblies subject to solvent cleaning and also to densely packed component structures where there is danger of damage to adjacent units while making solder connections.

Extensive evaluation has confirmed the excellent moisture resistance of the type PC (surpassed only by metal cased enclosures) and its conformance to the most stringent shock and vibration specifications. Type PC capacitors are exceptionally well suited for PRECISION FILTERS, DELAY LINES, and PRECISION TIMING CIRCUITS, where small size and excellence of performance are mandatory at LOW COST.

specifications (See Page 2170 for Electrical Characteristics)

CONSTRUCTION: The ARCO precision polystyrene capacitors types PC & PJ are encased in an irradiated polyolefin jacket sealed with bonded silicone rubber. Types PJ & SJ are encased in a silicone treated fused polystyrene jacket. This unique construction economically protects the excellent electrical characteristics exhibited in types PC and SC and is primarily intended for use where they will not be subjected to the following hazards:

1. Physical damage due to excessive heat during dip or flow solder assembly.
2. Solvent damage during cleaning operations
3. Exposure to excessive humidity for prolonged periods of time.

All types herein listed are wound with a SOLID CORE in the center for optimum stability, and are terminated with a disc lead assembly soldered directly to the extended foil for a completely NON-INDUCTIVE construction resulting in the lowest possible contact resistance and exhibiting complete FREEDOM FROM MICROPHONISM.

modified polystyrene capacitors

temperature-stable
small size
type HT tubular
type HB rectangular bathtub cans
hermetically sealed — metal case

An exclusive ARCO design modifying the temperature characteristics of the dielectric film to provide capacitors insensitive to temperature changes (±0.1% change to 85°C). Type HT and HB capacitors will meet ALL ENVIRONMENTAL REQUIREMENTS OF MIL-C-19978.

ARCO Type HT and HB capacitors are specifically designed for INTEGRATORS, PRECISION TIMING CIRCUITS, and PRECISION RC NETWORKS.

pecifications

ION FACTOR: When measured at or referred to 1kHz the dissipat factor shall not exceed 0.002 at 23°C

ION RESISTANCE: Insulation resistance when measured at the app able test temperature, shall equal or exceed the following values

	23°C	*85°C
megohm x mfd	10^6	1.5×10^5
ext the insulation resistance megohms need not exceed	10^8	10^6

*NOTE: verified on 100% of production

PER NG TEMPERATURE RANGE: The ARCO capacitor types listed can be ed for continuous operation from −55°C to +85°C without de ng. Transient exposure to +95°C will have NO DELETERIOUS eff .

EM ATURE COEFFICIENT: The temperature coefficient of ARCO type HT d HB capacitors is controlled so that the variation of capacitance fr room temperature to 85°C. is less than ±0.1%; from room te erature to −55°C. variation is less than ±0.25%. Tighter contr s available to special order (±0.05% from 10°C to 50°C).

DIELECTRIC ABSORPTION: When tested in accordance with paragraph 4.6.15 of MIL-C-19978, the dielectric absorption shall not exceed 0.05% over the entire operating temperature range.

STABILITY: Long term (1 year) capacitance drift under maximum operating conditions shall not exceed ±0.1%.

VOLTAGE RATING: ARCO type HT and HB capacitors are produced in 100 Volt DC rating. Other voltages to 1,000 volts can be supplied upon request.

CAPACITANCE TOLERANCE: ARCO specializes in precision capacitors. Available from standard production are tolerances of ±10%, ±5%, ±3%, ±2%, ±1%, ±½%, ±¼%, ±0.1%.

BURN-IN: All ARCO capacitors are subjected to a minimum of two 16 hour burn-in periods with 300% of rated voltage applied at 85°C.

CONSTRUCTION: ARCO type HT and HB capacitors are hermetically sealed in metal cases with compression glass-to-metal, solder-sealed terminals. They are wound with a SOLID CORE in the center for optimum stability, and are terminated with a disc lead assembly soldered directly to the extended foil for a completely NON-INDUCTIVE construction resulting in the lowest possible contact resistance and exhibiting complete FREEDOM FROM MICROPHONISM.

polystyrene and mica precision capacitors

zero temperature coefficient

type KT tubular

type KB rectangular bathtub cans

hermetically sealed — metal case

type KE flat epoxy encapsulated

A unique combination of Polystyrene and Mica dielectrics resulting a capacitor offering a truly ZERO TEMPERATURE COEFFICIENT (±10 ppm/°C from −55°C to +85°C standard production) with the ultimate in long term STABILITY. Type KT and KB capacitors will meet or exceed all requirements of MIL-C-19978, where applicable, under ALL ENVIRONMENTAL CONDITIONS specified therein.

ARCO Type KT, KB, and KE capacitors provide the utmost in performance for PRECISION-OSCILLATORS, TIMING CIRCUITS, and RC NETWORKS.

specifications

DISSIPATION FACTOR: When measured at or referred to 1kHz the dissipation factor shall not exceed the following
.001 @ 23°C

INSULATION RESISTANCE: Insulation resistance when measured at the applicable test temperature, shall equal or exceed the following values

	23°C	*85°C
megohm x mfd	10^5	10^3
except the insulation resistance in megohms need not exceed	10^6	10^4

***NOTE:** verified on 100% of production

OPERATING TEMPERATURE RANGE: The ARCO capacitor types listed can be used for continuous operation from −55°C to +85°C without derating. Transient exposure to +95°C will have NO DELETERIOUS effect.

TEMPERATURE COEFFICIENT: The temperature coefficient of Arco Type KT, KB, and KE capacitors is truly zero, they are usually produced to a tolerance of ±10 ppm/°C. They can also be produced to zero ±5 ppm°/C. The linearity of the temperature coefficient regardless of tolerance is ±1 ppm/°C. Other temperature coefficient centers may be supplied within the range of −100 to +20 ppm/°C THE TEMPERATURE COEFFICIENT OF THESE CAPACITORS **is tested on a 100% basis.** Data verifying these tests can be supplied at NO EXTRA COST as requested.

DIELECTRIC ABSORPTION: When tested in accordance with paragraph 4.6.15 of MIL-C-19978, the dielectric absorption shall not exceed 1.0% over the entire operating temperature range.

STABILITY: Long term (1 year) capacitance drift under maximum operating conditions shall not exceed ±0.05%.

VOLTAGE RATING: Arco Type KT, KB, and KE capacitors are available 100, 200, and 400 volts DC ratings (all supplied in the same case size). Other voltages up to 1,000 volts can be supplied upon request.

CAPACITANCE TOLERANCE: ARCO specializes in precision capacitors. Available from standard production are tolerances of ±10%, ±5%, ±3%, ±2%, ±1%, ±½%, ±¼%, ±0.1%.

BURN-IN: All ARCO capacitors are subjected to a minimum of two 16 hour burn-in periods with 300% of rated voltage applied at 85°C.

CONSTRUCTION: The Arco Type KT, KB, and KE capacitors are constructed by a unique combination of polystyrene dielectric section with a linear negative temperature coefficient cross compensating a mica dielectric capacitor section with a linear positive. The polystyrene capacitor section is wound with a SOLID CORE in the center for optimum stability, and is terminated with a dual lead assembly soldered directly to the extended foil for a completely NON-INDUCTIVE construction resulting in the lowest possible internal resistance. The mica capacitor section is the well known Arco-Elmenite capacitor exhibiting highest reliability and performance characteristics. The individual capacitor sections as well as their combination have been constructed so as to guarantee all performance characteristics listed as well as complete FREEDOM FROM MICROPHONICS.

PFC
Manufacturing Division
ARCO ELECTRONICS

polystyrene capacitors

type PE

Arco PFC Division announces availability of a new polystyrene dielectric capacitor with a thin configuration specifically designed for conservation of space in printed circuits and in filters. Flat polystyrene sections are encapsulated in uniform epoxy preforms to provide the following features:

0.1" thickness

Uniform lead spacing for p-c use.
Uniform size and flush mounting.
Both weldable and solderable leads.
Rugged, moisture proof construction.

specifications

CAPACITANCE RANGE: .001 to .01 mfd
TOLERANCE: ±5%, ±2%, ±1%, ±½%, ±¼%, ±0.1%.
VOLTAGE RATING: 100VDCW
INSULATION RESISTANCE: 10^{13} ohms minimum at 25°C — 10^{12} ohms at 85°C.
DISSIPATION FACTOR: 0.01% maximum at 25°C, — 0.02 maximum at 85°C.
DIELECTRIC ABSORPTION: 0.05% maximum at all temperatures.
TEMPERATURE COEFFICIENT: Negative 190 ±30 ppm/°C
LONG TERM OPERATING STABILITY: ±0.1% maximum drift under fixed or variable operating conditions within specified maximum limits.

All the above design advantages are accompanied by modest prices and quick delivery. Any value within the standard range (.001 mfd. to .01 mfd.) is in stock in all tolerances for immediate delivery (72 hours).

In addition to the physical advantages of this design, the electrical excellence of ARCO polystyrenes has been retained. High long term stability under maximum operating conditions, low dissipation factor and dielectric absorption, extremely high insulation resistance, close tolerance are featured. And also important is the ARCO control of quality which results in close uniformity not only from unit to unit, but from production lot to production lot as well.

The Nickel "A" leads of ARCO Type PE capacitors are welded directly to the capacitor section. The strength and permanence of electrical contact is thereby entirely independent of encapsulation.

All Arco Type PE capacitors are "debugged" 100% prior to shipment by accelerated life test at stress levels exceeding ratings to eliminate potential early failures. Extensive data on reliability of Arco polystyrene capacitors is available for documentation

precision RC networks

The ultimate in temperature coefficient control of RC product.

Linear TC of ±5 ppm/°C over temperature range of −55°C to +85°C.

ARCO's ability to produce capacitors with adjustable and closely uniform characteristics has facilitated the design of highly precise RC networks. By matching zero temperature coefficient resistors and capacitors, or by balancing temperature coefficients to obtain a zero (or other specified) T.C. on the RC product, networks which have long term stability independent of temperature are obtained. At the same time, RC products of better than ±0.05% accuracy can be supplied. Testing is performed on a 100% basis on both resistors and capacitors with temperature coefficient data recorded at the temperature extremes.

PFC variable compression-type mica capacitors

Manufacturing Division
ARCO ELECTRONICS

hermetically sealed

ARCO introduces the first hermetically-sealed variable compre ion-t mica capacitor. Designated as Types HE-30 and HE-30M, th e u employ a specially designed enclosure that protects them a nst effects of moisture, pressure variation, fungus, salt spray, st, mechanical damage. Additionally, the case provides effectiv elect static shielding.

The basic capacitor design is the time-tested Type 30 padder w est lished reliability verified by more than 25 years of operational e rien

The enclosure measures 1 9/16″ by 15/16″ by 3/4″ deep. The drawn ss is hot tin dipped and all mechanical parts are nickel-plated b s. T capacitor element is completely insulated from the case and c nect is made at the rear by means of two lugs mounted on glass-me seals. The unit is designed for single-hole panel mounting sing 15/32″ — 32 bushing. A bushing nut is furnished as part of the a emb Rotational control can be either by means of a screwdriver sl at end of the 1/4″ shaft or by means of a standard knob of the us's o choice. The rotary shaft seal enhances the stability of the shaf setti under conditions of shock and vibration. For complete lockin of shaft after adjustment, an accessory shaft lock is available. T sha lock also provides redundant humidity protection where the tima in reliability is needed.

The HE-30 is a 250VDC rated series in 14 discreet capacitanc ang from 15-130 PF to 1400-3055 PF. The HE-30M is a 500VDC rate serie also in 14 similar ranges from 15-120 PF to 1200-2525 PF. Th e a guaranteed minimum ranges in three turns of adjustment. Dis atio factor at 1MC is better than .001. Insulation resistance is bet th 100,000 megohms.

Stability of the capacitance varies with the particular setting, ever a conservative design limit is a maximum of ±3% change cause by combinations of temperature cycling, vibration, shock, hystere , et As the extremes of environment are reduced toward laborator cond tions, the stability will be improved at least ten-fold or to ±0.3% Operating temperature range is −55°C. to +85°C.

PRECISION FIL CAPACITOR

Balco/Marstan brings together the precision capacitor experience of Balco Capacitors and the precision resistor capability of Marstan Electronics. Balco/Marstan specializes in the design of ultraprecision film capacitors, wirewound resistors, and networks — resistive, capacitive, or RC. The product line — special or standard — is designed for the user who needs a combination of demanding performance parameters such as high stability, low temperature coefficient, and tight tolerance over a wide range of environmental extremes.

BALCO/MARSTAN PLASTIC FILM CAPAC
Feature:

- Accuracy Tolerances to 0.1%
- Dielectric Absorption lower than 0.03%
- Dissipation Factors to 0.008%
- Insulation Resistance greater than 10^{14} ohr
- Retrace Stability lower than 0.02%

DIELECTRIC SELECTOR GUIDE

TERM	DEFINITION
Dielectric Absorption	Property of dielectric materials, sometimes called dielectric hysteresis, causing current to continue flowing a capacitor is theoretically charged and charge to remain after capacitor is theoretically discharged.
Dissipation Factor	Ratio of the equivalent series resistance to reactance of a capacitor at a given frequency.
Retrace Stability	Measure of the difference in capacitance value at a specific temperature after the capacitor has been exposed t temperature excursion.
Temperature Coefficient	Change in capacitance as a function of temperature, resulting from variations in dielectric constant, capaci geometry, and mechanical stresses.

AP CITOR TYPES

Balco/Marstan uses six different dielectrics to assure you precision capacitors to meet a variety of specifications:

Mylar – ultrastable, low loss, low temperature coefficient material, ideally suited for high insulation resistance requirements at temperatures up to 200°C. Available in extended foil and metalized film.

Polystyrene — ultrastable, very low loss material with a negative temperature coefficient that favors its use in applications at temperatures up to 85°C, where optimum electrical performance is essential. Available in extended foil only.

Polycarbonate — ultrastable material with a low temperature coefficient, for use at temperatures up to 125°C. Available in metalized film only.

Kraft – suggested for temperatures up to 125°C in applications where extreme precision is not required, but size and cost are important factors. Available in extended foil and metalized film.

Two different internal construction styles are offered as options to the circuit design engineer:

Extended Foil — Low dissipation factors and high circulating current capabilities favor its selection for use in high power resonant and pulse circuits.

Metalized Film — Self healing in the event of voltage breakdown, its more uniform temperature coefficient and low volume per microfarad make it ideal for resistor efficient matching and for use in subminiature capacitors.

Capacitors can be provided in any of the following packages:

Hermetically Sealed for maximum environmental protection to insure high precision and stability.

Tape Wrap primarily for economy in price and size where severe environments are not involved.

Plastic Encased to provide mechanical ruggedness and moderate environmental protection.

Specials, including plastic and metallic enclosures, designed for custom packaging requirements.

PRECISION NETWORKS

Our unique side by side resistor and capacitor processing insures the ultimate in component compatibility and overall network performance. Resistors and capacitors can be precisely matched to track over wide temperature ranges.

Typical Networks Manufactured by Balco/Marstan:

- Matched impedance Attenuators
- Summing Networks
- Integrators
- Voltage Dividers
- Phase Shifters
- Binary Resistance Networks
- Twin T Networks
- Bridges
- A/D and D/A Converters
- Timing Networks

GENERAL SPECIFICATIONS

1. Capacitance: Capacitance range 1 pf through 3.9 mfd. When measu as lis below at 25°C (Reference MIL-STD 202 Method 305).
2. Capacitance Tolerance: Standard tolerance ±10%, ±20%, and G.M. (G tolerances available on special order.)
3. Dissipation Factor: Measured as listed below at 25°C (Referen MIL 202 Method 305).
4. Insulation Resistance: Greater than 50,000 megohms or 1,000 m hm whichever is less when tested at a minimum of twice rated volt e an accordance with Method 302, of MIL-STD 202.
5. Voltage Rating: See chart (Other voltage ratings available so applications.)
6. Temperature Range: —55°C to +125°C, operating for all valu with voltage derating required.
7. Dielectric Withstanding Voltage: A test potential of 2.5 times ra volt applied between the capacitor terminals for a period of 5±1 seco s wi limiting surge current of 50 m a maximum, in accordance w mat 301 of MIL-STD 202.

Characteristic	Maximum DF @ 25°C	Temperature Charac	
		Zero Volts	Rat Vo
A	.1% when measured @ 1 KHz @ 1 VRMS	± .5%	± .5
B	2.5% when measured @ 1 KHz @ 1 VRMS	±10%	+10 —25
C	2.5% when measured @ 1 KHz @ 1 VRMS	+ 8% —17%	+ 8 —30
D	3.0% when measured @ 1 KHz @ .5 VRMS	+15% —30%*	+15 —50

*Over Temp. Range —15° to +85°C

GENERAL SPECIFICATIONS: CNP PELLET SERIES

1. Capacitance Tolerance: Available in F = ±1%; G = ±2%; J = ±5%; K = ±10%; M = ±20%; Z = GMV.
2. Dissipation Factor (DF): 0.1% maximum for values of 10 pf through 3300 pf.
3. Voltage Rating: D = 50 VDC; E = 100 VDC.
4. Capacitance and DF Measurements: Tested IAW with Method 305 of MIL-STD 202. Values of 1000 pf or less: 1 MHz ± 1 KHz. Values over 1000 pf: 1 KHz ± 100 Hz. Test Voltage: 1.0 ±0.2 Volts rms.
5. Insulation Resistance (IR): When tested IAW Method 302 of MIL-STD 202, 50 Volts DC applied, the insulation resistance shall be 100,000 megohms minimum or 1000 megohm microfarads, whichever is less.
6. Dielectric Withstanding Voltage: A test voltage equal to 250% of rated DC voltage current limited to 50 MA.

SCP SERIES and CNP SERIES

1. Protective Coating: Thin film resin impregnated to withstand normal handling and storage.
2. Maximum allowable lead run-up: .025" unless otherwise specified.
3. Terminations: Solderable and weldable ribbon leads, disc terminations, or 30 gauge wire leads.

CAL-R® INC. CAPACITOR DIVISION

CAL-R 200, 250, 300 SERIES

GENERAL SPECIFICATIONS

1. Test Voltage: 2.5X rated voltage.
2. Lead Strength: 5 lb. maximum pull on molded units. 2 lb. maximum pull on dipped units.
3. Maximum Capacitance Change With Temperature: ±10% of R.T. value @ 1 KC from —15°C to +85°C; +15%, —20% of R.T. value @ 1 KC from —55°C to +150°C.
4. Insulation Resistance: Greater than 1000 megohm microfarads or 25,000 megohm @ 25°C.
5. Dissipation Factor: 2.5% maximum @ 1 KC, 25°C ±2°C and .5VRMS.
6. Capacitance: Measured at 25°C ±2°C, 1 KC and .5VRMS.
7. Capacitance Tolerance: Available in ±5%, ±10% and ±20%.
8. Case: Available in either molded epoxy or resin dip coat.
9. Dip coated units protected with thin film resin impregnated for normal handling and storage. Maximum allowable lead run-up, .025 unless otherwise specified.

*Note: For tolerance add the following letter to end of part number: J = ±5%, K = ±10%, M = ±20%
For dipped units substitute SCD for SCM on all part numbers

GENERAL SPECIFICATIONS/710 SERIES

CASE TYPE
Dipped resin.
LEADS
Solder coated oxygen free copper. No. 26 AWG (CD07/08). No. 24 AWG (CD09/10).
PART MARKING
Where space permits. Manufacturing Symbol, Capacitance Value, Capacitance Tolerance (K or M) and Voltage Rating.

ELECTRICAL

DISSIPATION FACTOR (DF)
Characteristic K: 2.5% maximum for values of 10 pF through 1.00 microfarad
Characteristic N: 0.1% maximum for values of 10 pF through 0.01 microfarad
CAPACITANCE AND DF MEASUREMENTS
Test Frequency for characteristic K in values of 100 pF or less: 1 MHz ±1 kHz and values over 100 PF: 1 kHz ±100Hz Characteristic N in values of 1000 pF or less: 1 MHz ±1 kHz. Values over 1000 pF: 1 kHz ±100 Hz. Test Voltage: 1.0 ±0.2 volts rms.
INSULATION RESISTANCE (IR)
50 volts DC applied the insulation resistance shall be 100,000 megohms Minimum or 1000 megohm microfarad, whichever is less.
DIELECTRIC WITHSTANDING VOLTAGE
A test voltage equal to 250% of rated DC voltage current limited to 50 MA.

ENVIRONMENTAL

OPERATING TEMPERATURE RANGE
—55°C to +125°C operating for all values with no voltage derating required.
TEMPERATURE CHARACTERISTICS
Characteristic K: ±15% at zero volts DC, from —55°C to +125°C. Characteristic N: 0 ±30 PPM/°C at zero volts DC from —55°C to +125°C.

PART NUMBERING SYSTEM

Type	Style	Temperature Characteristics	Volts	Capacitance Value	Capacitance Tolerance

Centralab Ceramic Capacitors Can fill your Capacitor Needs!

Centralab disc and tubular capacitor catalogs as well as the special purpose catalogs cover hundreds of types of ceramic capacitors for military, industrial and commercial applications.

Request your copy through Centralab's advertising department.

Here are typical Centralab Capacitors. Types listed here are not necessarily available, in all extremes of temperature coefficients, capacitance ranges, and tolerances.

Temperature Compensating Discs

WORKING VOLTAGE	TEMPERATURE COEFFICIENTS	CAPACITANCE RANGE pf	CAPACITANCE TOLERANCES
DISCS			
500V	NPO to N5250	1.1-3100	±.25 pf and ±.5 pf when nominal capacitance is 10 pf or less. Over 10 pf ±5%, ±10% or ±20%
1KV	NPO to N5250	2.5-2150

25	.3 to 1.0"	±30% or ±20%	5%	.015 to .2

High Temperature

Wide range of capacities, tolerances, TC & Hi-K bodies for operation at 125°C. Exceptionally stable Hi-K bodies with maximum change in capacity of ±15% from −55°C to +125°C are available.

Polystyrene Capacitors are also available in the Centralab line. These long life, low cost units are the ideal replacements for paper, mica, and Mylar capacitors.

FOR IMMEDIATE DELIVERY — many of these are available through Centralab Industrial Distributors.

ELECTRICAL AND PERFORMANCE

CAPACITANCE — Measured on a polarized capacitance bridge with a maximum polarizing voltage of 2.2 VDC and a maximum AC signal of 1.0 volts RMS. See Table B for available ratings.

TOLERANCE — Except for the U case size, standard tolerance is ±20% with ±10% or ±5% tolerance available in all case sizes. 10% decade values are offered in ±10% or ±5% tolerance.

DISSIPATION FACTOR — Measured simultaneously with capacitance as above. See Table B for maximum 25°C values.

DC LEAKAGE CURRENT — With rated WVDC applied through a 1000 ohm resistor for 5 minutes maximum, DCL values will not exceed 10 times Table B values. At 125°C with 2/3 rated WVDC applied, DCL values will not exceed 15 times Table B values.

OPERATING VOLTAGE — Capacitors will operate reliably up to rated WVDC at 85°C and to 125°C with linear derating to 2/3 WVDC. Capacitors will withstand up to ½ volt reverse DC bias at 85°C. AC ripple voltage should be limited so that the forward DC voltage plus peak AC voltage does not exceed rated WVDC.

SURGE VOLTAGE — At 85°C and at 60-second intervals, capacitors withstand 1000 30-second applications of 130% rated WVDC.

TEMPERATURE: — No derating is required between −55°C and +85°C. Between 85°C and 125°C, derate linearly to 2/3 WVDC.

MOISTURE RESISTANCE — Following Method 106, MIL-STD-202 testing, capacitors will meet initial DC leakage requirements. Capacitance will be within ±10% of initial values.

LIFE TEST — After 2000 hours at 85°C with rated WVDC applied, capacitors will meet initial DC leakage and DF requirements. Capacitance will not change more than ±10% from original values.

MECHANICAL AND PART NUMBERS

CONSTRUCTION — Tantalum pellets are encased in Mylar sleeves and sealed with a special moisture resistant epoxy resin. This rugged, fully insulated package withstands a one minute application of a 100 volt potential applied between the leads shorted together and an encircling metal foil envelope.

LEADS — Leads are solder coated pure nickel wire suitable for soldering or welding. Tested in accordance with MIL-C-39003, .010 diameter leads withstand a 1 lb. pull and .016 diameter leads a 3 lb. pull. All lead diameters withstand 5 rotations twist.

MARKING — Capacitance value is shown by means of standard EIA color code dots except for the J case size where all data is printed. Because the Mylar cases are black, black dots are omitted. ±10% tolerance is indicated by a silver dot, ±5% tolerance by a gold dot.

PART NUMBERS — When specifying, include Suffix "A" for axial leads or "R" for radial leads as shown in Table B. Tolerance is indicated by adding "—40", "—20", "—10", or "—5" to all part numbers as appropriate, i.e., M475A-20, J157R-5, etc.

MINITAN® CORDWOOD microminiature solid tantalum capacitors

For: Filtering — Coupling — By-passing — Timing

- POLAR TYPE
- MICROMINIATURE SIZE
- MYLAR CASED, RESIN SEALED
- COMPLETELY DRY ELECTROLYTE
- INDEFINITE SHELF/OPERATING LIFE
- AXIAL OR RADIAL LEAD STYLES
- TINNED, WELDABLE/SOLDERABLE LEADS
- TOLERANCES TO ±5%
- .001 TO 47 MFD
- 50 TO 3 WVDC
- −55°C TO +125°C
- .01 uA/MFD-VOLT DC LEAKAGE
- 130% SURGE VOLTAGE RATING
- ½ VOLT REVERSE DC BIAS AT 85°C
- 1 TO 10 OHM IMPEDANCE AT 1 MHz
- RELIABILITY DOCUMENTATION AVAILABLE

GENERAL

These precision, subminiature polar capacitors are suitable for general filtering, coupling, by-passing, and RC timing applications to 85°C without derating and to 125°C with derating to 2/3 WVDC. Very favorable capacitance to volume ratios make them especially well suited to high density applications such as found in avionics systems, subminiature communications equipment, and thick film circuitry.

ELECTRICAL AND PERFORMANCE

TOLERANCE — Except for the Y and P case sizes, standard tolerance is ±20% with ±10% or ±5% tolerance available in all case sizes. 10% decade values are offered in ±10% or ±5% tolerance.

CAPACITANCE — Measured on a polarized capacitance bridge with a maximum polarizing voltage of 2.2 VDC and a maximum AC signal of 1.0 volts RMS. See Table B for available ratings.

DISSIPATION FACTOR — Measured simultaneously with capacitance as above. See Table B for maximum 25°C values.

DC LEAKAGE CURRENT — With rated WVDC applied through a 1000 ohm resistor for 5 minutes maximum, DCL values will not exceed those shown in Table B. At 85°C, DCL values will not exceed 10 times Table B values. At 125°C with 2/3 rated WVDC applied, DCL values will not exceed 15 times Table B values.

OPERATING VOLTAGE — Capacitors will operate reliably up to rated WVDC at 85°C and to 125°C with linear derating to 2/3 WVDC. Capacitors will withstand up to ½ volt reverse DC bias at 85°C. AC ripple voltage should be limited so that the forward DC voltage plus peak AC voltage does not exceed rated WVDC.

SURGE VOLTAGE — At 85°C and at 60-second intervals, capacitors will withstand 1000 30-second applications of 130% rated WVDC.

TEMPERATURE — No derating is required between −55°C and +85°C. Between 85°C and 125°C, derate linearly to 2/3 WVDC.

MOISTURE RESISTANCE — Following Method 106, MIL-STD-202 testing, capacitors will meet initial DC leakage requirements. Capacitance will be within ±5% of initial values.

LIFE TEST — After 2000 hours at 85°C with rated WVDC applied, capacitors will meet initial DC leakage and DF requirements. Capacitance will not change more than ±10% from initial values.

MECHANICAL AND PART NUMBERS

CONSTRUCTION — Tantalum pellets are encased in Mylar sleeves and sealed with a special moisture resistant epoxy resin. This rugged, fully insulated package withstands a one minute application of a 100 volt potential applied between the leads shorted together and an encircling metal foil envelope.

LEADS — Leads are solder coated pure nickel wire suitable for soldering or welding. Tested in accordance with MIL-C-39003, .010 diameter leads withstand a 1 lb. pull and .016 diameter leads a 3 lb. pull. All lead diameters withstand 5 rotations twist.

MARKING — Capacitance value is shown by means of standard EIA color code dots. The anode indicator dot also serves as the third color dot. Because the Mylar cases are black, black dots are omitted. ±10% tolerance is indicated by a silver dot, ±5% tolerance by a gold dot.

PART NUMBERS — When specifying, include Suffix "A" for axial leads or "R" for radial leads as shown in Table B. Tolerance is indicated by adding "—", "—20", "—10", or "—5" to all part numbers as appropriate, i.e., A106A-20, Y225R-10, etc.

GENERAL

The Militan® TR Series is designed to equal or exceed applicable requirements of MIL-C-39003, case styles CSR13. Along with the Militan TM Series (sub-miniature CSR09 styles), the TR Series is intended for general energy storage, filtering, coupling, by-passing, and noncritical RC timing applications over the temperature range −55°C to +125°C. Miniature size, established reliability, and excellent electrical characteristics make these units the most widely applied of all solid tantalums for computers, communications equipment, avionics gear, and high quality government and industrial instrumentation.

ELECTRICAL CHARACTERISTICS

CAPACITANCE — See Table B for available ratings — Capacitance is measured in accordance with MIL-C-39003 on a polarized capacitance bridge at 120 ±5Hz with a polarizing voltage of 1.0 volts minimum and 2.2 volts maximum and an AC signal of 1.0 volts RMS maximum. When testing these capacitors, it is important that the combined AC and DC voltage not exceed the DC rated voltage.

CAPACITANCE TOLERANCE — See Table B. Standard capacitance tolerance are ±20% and ±10% with ±5% available on special order in all case sizes and ratings.

Note that MIL-C-39003 does not provide for ±5% tolerance ratings — although the latter are available on special order with appropriate certification indicating compliance with CSR13 requirements.

DISSIPATION FACTOR — See Table B. Dissipation factor (DF) is measured in accordance with MIL-C-39003 simultaneously with capacitance as described above. DF is a figure of merit and is defined by the formula $DF = \frac{Rs}{Xc} = 2\pi fCRs$ where Rs is the Equivalent Series Resistance (ESR).

OPERATING TEMPERATURE — −55°C to +125°C. Above 85°C, derate linearly to 2/3 rated DC voltage at 125°C.

DC LEAKAGE CURRENT — DC leadage (DCL) is measured in accordance with MIL-C-39003 with rated voltage applied through a 1000 ohm resistor in series with the capacitor for 5 minutes maximum. 25°C DCL values are specified in Table B. At 85°C, DCL will not exceed .1 uA/mfd-volt or 5.0 uA whichever is greater. At 125°C, DCL will not exceed .15 uA/mfd-volt or 7.5 uA, whichever is greater.

OPERATING VOLTAGE — Capacitors will operate reliably up to rated WVDC at 85°C and to 125°C with linear derating to 2/3 WVDC.

SURGE VOLTAGE — Surge voltage is the maximum allowable short term voltage including transients and peak ripple voltage. Tested in accordance with MIL-C-39003, units withstand 1000 surges of 130% DC rated voltage at 85°C. The duration of each surge cycle is 30 seconds on, 30 seconds off.

REVERSE DC VOLTAGE — Militan® TR Series capacitors will withstand a continuous reverse DC bias of ½ volt at 85°C. Excessive reverse biasing should be avoided for greatest reliability and operating life.

TEST AND PERFORMANCE REQUIREMENTS

Test methods, procedures, and performance criteria are as specified in MIL-C-39003 for the CSR13 case styles.

TEMPERATURE CYCLING AND VOLTAGE AGING — Method 102, Condition C of MIL-STD-202 followed by exposure at 85°C for 40 hours minimum.

RADIOGRAPHIC INSPECTION — In accordance with MIL-C-39003.

SEAL TEST — Method 112, Condition A of MIL-STD-202.

SHOCK, MEDIUM IMPACT — Method 205, Condition C of MIL-STD-202.

VIBRATION, HIGH FREQUENCY — Method 204, Condition D of MIL-STD-202.

SALT SPRAY (Corrosion) — Method 101, Condition B of MIL-STD-202.

TEMPERATURE CYCLING AND IMMERSION — Temperature cycling: Method 102, Condition C of MIL-STD-202. Immersion: Method 104, Condition B of MIL-STD-202.

SOLDERABILITY — Method 208 of MIL-STD-202.

TERMINAL STRENGTH — Method 211 of MIL-STD-202.
Pull Test: 3 lbs. for 3 seconds (Condition A)
Twist Test: 5 bends (Condition D)

MOISTURE RESISTANCE — Method 106 of MIL-STD-202.

SLEEVING — In accordance with MIL-C-39003.

STABILITY AT LOW AND HIGH TEMPERATURE — In accordance with MIL-C-39003.

SURGE VOLTAGE — In accordance with MIL-C-39003.

LIFE — Method 108 of MIL-STD-202.

FUNGUS — Method 508, of MIL-STD-810.

RESISTANCE TO SOLVENTS — In accordance with MIL-C-39003.

MECHANICAL AND PART NUMBERS

GENERAL — All styles are characterized by metal cases axial leads, glass to metal hermetic seals, and polyester insulating sleeves.

LEADS — Leads are solder coated pure nickel wire (Type N3, MIL-STD-1276) suitable for either soldering or welding. See Table A for wire diameters.

MARKING — Units are marked in accordance with MIL-C-39003.

PART NUMBERS — See Table B for available ratings. To designate failure rate, add suffix "L" (2.0%/1,000 hrs.), "M" (1%/1,000 hrs.), or "P" (0.1%/1,000 hrs.).

- 75 TO 6 WVDC
- .01 uA/MFD-VOLT DC LEAKAGE
- 130% SURGE VOLTAGE RATING
- TINNED OR GOLD PLATED LEADS
- EYELETLESS CONSTRUCTION
- REEL PACKAGING AVAILABLE

GENERAL

These precision subminiature polar capacitors are intended for general ne storage, filtering, coupling, by-passing, and noncritical RC timing appli to 85°C without derating and to 125°C with appropriate derating. Series is designed to meet or exceed applicable requirements of MIL-3900 (style CSR09). Subminiature size, eyeletless construction, and overall p ance and reliability characteristics make these units well suited for se airborne computers, space vehicles, subminiature communications equ thick film circuitry, and similar applications.

ELECTRICAL AND PERFORMANCE

CAPACITANCE — Capacitance is measured in accordance with MIL-C-3900 on polarized capacitance bridge at 120 ±5 Hz with a porarizing voltage volts minimum and 2.2 volts maximum and an AC signal of 1.0 volt RMS ma

CAPACITANCE TOLERANCE — Standard tolerance is ±10%.

DISSIPATION FACTOR — DF is measured simultaneously with capacita above. At 25°C, DF will not exceed 3% (20 through 75 WVDC) or through 15 WVDC). At −55°C, DF will not exceed 4% (20 through 75 or 8% (6 through 15 WVDC).

DC LEAKAGE CURRENT — DC leakage (DCL) is measured in accordanc MIL-C-39003 with rated voltage applied through a 1000 ohm resistor in with the capacitor for 5 minutes maximum. 25°C DCL values are speci Table B.

OPERATING VOLTAGE — Capacitors will operate reliably up to rated W 85°C and to 125°C with linear derating to 2/3 WVDC. Capacitors will stand up to ½ volt reverse DC bias at 85°C. AC ripple voltage sho limited so that the forward DC voltage plus peak AC voltage does not rated WVDC.

SURGE VOLTAGE — At 85°C and at 60-second intervals, capacitors wit 1000 30-second applications of 130% rated WVDC.

MECHANICAL AND PART NUMBERS

OPERATING TEMPERATURE — No derating is required between −80°C +85°C. Between 85°C and 125°C, derate linearly to 2/3 rated WVDC.

LIFE TEST — After 2000 hours at 85°C with rated WVDC applied, DC le and DF will not exceed Table B values and capacitance will be within of the values initially measured.

TEST PROCEDURES — Test methods and procedures are in accordance MIL-C-39003.

CONSTRUCTION — Tubular metal case, axially located leads, glass to hermetic seal, eyeletless construction (positive lead embedment in glass area), polyester insulating sleeve.

LEADS — Anode leads are solder coated nickel-iron alloy 52. Cathode are solder coated pure nickel wire (Type N3 of MIL-STD-1276). Both leads optionally be gold plated. See below under PART NUMBERS.

MARKING — Units are marked in accordance with MIL-C-39003.

PART NUMBERS — Both government and Components part numbers are s in Table B. The government nomenclature system does not provide for optional gold plated leads permitted under Amendment 2 of the CSR09 s sheet. Under the Components numbering system for the TM Series, gold p leads are denoted by adding suffix G, i.e. TM1-035-474-10-MG.

ECONOTAN® C subminiature solid tantalum capacitors

For: Filtering — Coupling — By-passing — Timing

- POLAR TYPE
- SUBMINIATURE SIZE
- METAL CASED, EPOXY SEALED
- REEL PACKAGING AVAILABLE
- COMPLETELY DRY ELECTROLYTE
- INDEFINITE SHELF/OPERATING LIFE
- TINNED, WELDABLE/SOLDERABLE LEADS
- ±20% AND ±10% TOLERANCES
- .0047 TO 68 MFD
- 35 TO 4 WVDC
- −55°C TO +85°C
- .02 uA/MFD-VOLT DC LEAKAGE
- 130% SURGE VOLTAGE RATING
- ½ VOLT REVERSE DC BIAS AT 85°C
- 1 TO 10 OHM IMPEDANCE AT 1MHz
- RELIABILITY DOCUMENTATION AVAILABLE

ELECTRICAL AND PERFORMANCE

CAPACITANCE — Measured on a polarized capacitance bridge with a maximum polarizing voltage of 2.2 VDC and a maximum AC signal of 1.0 volts RMC. See Table B for available ratings.

TOLERANCE — Standard tolerance is ±20% with ±10% tolerance available in all case sizes. 10% decade values are offered in ±10% tolerance.

DISSIPATION FACTOR — Measured simultaneously with capacitance as above. See Table B for maximum 25°C values.

DC LEAKAGE CURRENT — With rated WVDC applied through a 1000 ohm resistor for 5 minutes maximum, DCL values will not exceed those shown in Table B. At 85°C, DCL values will not exceed 10 times Table B values.

OPERATING VOLTAGE — Capacitors will operate reliably up to rated WVDC at 85°C. Capacitors will withstand up to 1/2 volt reverse DC bias at 85°C. AC ripple voltage should be limited so that the forward DC voltage plus peak AC voltage does not exceed rated WVDC.

SURGE VOLTAGE — At 85°C and at 60-second intervals, capacitors withstand 1000 30-second applications of 130% rated WVDC.

TEMPERATURE — No derating is required between −55°C and +85°C.

MOISTURE RESISTANCE — Within 6 hours of the completion of Method 106, MIL-STD-202 testing, DC leakage current will not exceed initial limits. Capacitance will not change more than ±5% from initial values. Dissipation factor will not exceed twice initial limits.

MECHANICAL AND PART NUMBERS

CONSTRUCTION — Econotan® C Series models feature Mylar sleeve, metal case construction and are sealed with a special high stability, moisture resistant epoxy resin.

INSULATING SLEEVE — All units are supplied as standard with Mylar insulating sleeves. Units can also be supplied without sleeves. See below under PART NUMBERS.

PART NUMBERS — Part numbers are shown in Table B. For unsleeved units, add suffix "U" to all part numbers, i.e., CT35-224-20U, CM06-156-10U, etc.

DIPITAN® TD dipped epoxy solid tantalum capacitors

For: Filtering — Coupling — By-passing — Tinning

- POLAR TYPE
- DIPPED EPOXY CONSTRUCTION
- COMPLETELY DRY ELECTROLYTE
- SOLDER COATED PURE NICKEL LEADS
- ±20% AND ±10% TOLERANCES
- −55°C TO +85°C
- .10 TO 270 MFD
- 35 TO 6 WVDC
- 130% SURGE VOLTAGE RATING
- ½ VOLT REVERSE DC BIAS AT 85°C
- .02 uA/MFD-VOLT DC LEAKAGE
- RADIAL LEADS

GENERAL

These miniature polar solid tantalum capacitors are suitable for general filtering, coupling, bypassing, and non-critical RC timing applications to 85° without derating. Intended specifically for commercial and industrial applications the Dipatan® Series features long shelf life, superior electrical performance and radial lead construction for use in miniature printed circuit applications.

ELECTRICAL AND PERFORMANCE

CAPACITANCE — Measured on a polarized capacitance bridge with a maximum polarizing voltage of 2.2 VDC and a maximum AC signal of 1.0 volts RC. See Table B for available ratings.

TOLERANCE — Standard tolerance is ±20% with ±10% tolerance available in all case sizes.

DISSIPATION FACTOR — Dissipation factor (DF) is measured simultaneously with capacitance as described above. At 25°C and 120 Hz DF will not exceed % for values through 56 MFD, 8% for values through 120 MFD, and 10% for values over 120 MFD.

DC LEAKAGE CURRENT — DC leakage (DCL) is measured by applying rated DC voltage through a 1000 ohm resistor in series with the capacitor for 5 minutes maximum. At 25°C, DCL will not exceed .02 uA/mfd-volt or 1.0 uA, whichever is greater. At 85°C DCL will not exceed .2 uA/mfd-volt or 10 uA, whichever is greater.

OPERATING VOLTAGE — Capacitors will operate reliably up to rated WVD at 85°C. Capacitors will withstand up to 1/2 volt reverse DC bias at 85°C. AC ripple voltage should be limited so that the forward DC voltage plus peak AC voltage does not exceed rated WVDC.

SURGE VOLTAGE — At 85°C and at 60-second intervals, capacitors withstand 1000 30-second applications of 130% rated WVDC.

TEMPERATURE — No derating is required between −55°C and +85°C.

MECHANICAL AND PART NUMBERS

CONSTRUCTION — Dipatan® Series capacitors feature rectangular anode construction sealed with a special high stability epoxy resin.

LEADS — Leads are solder coated high purity nickel wire suitable for either soldering or welding. They will withstand a 3 lb. axial pull test.

MARKING — All units are marked with capacitance, working voltage, polarity dot, and tolerance symbol (M = ±20%, K = ±10%).

PART NUMBERS — Basic part numbers are shown in Table B. Tolerances are indicated by adding suffix "—20" for ±20% tolerance and "—10" for ±10% tolerance, i.e. TD1-015-685-20.

GENERAL

The miniature gelled electrolyte Weltan® TA Series combines ultra-low DC leakage with true glass-to-metal seal hermetic construction. As compared with equivalent solid electrolyte tantalum capacitors. Weltan TA units are approximately 50% smaller and offer order of magnitude lower DC leakage values at elevated temperatures. Weltan® TA units are particularly well suited to high packaging density applications requiring low DC leakage combined with long-term stability and high reliability.

ELECTRICAL AND PERFORMANCE

CAPACITANCE — Measured on a polarized capacitance bridge with a maximum polarizing voltage of 2.2 volts DC and a maximum AC signal of 1.0 volts RMS. See Table B for available ratings.

TOLERANCE — Standard tolerances are ±20%, ±10%, and ±5%.

POWER FACTOR — Measured simultaneously with capacitance as above. See Table B for maximum 25°C values.

DC LEAKAGE CURRENT — With rated voltage applied through a 1000 ohm resistor for 5 minutes maximum, DCL values at 25°C and 125°C will not exceed those shown in Table B.

IMPEDANCE — At −55°C and 120 Hz, impedance values will not exceed those shown in Table B.

OPERATING VOLTAGE — Capacitors will operate reliably up to rated WVDC at 85°C and to 125°C with linear derating to 2/3 WVDC. AC ripple voltage should be limited so that the DC voltage plus peak AC ripple voltage does not exceed rated WVDC. The DC component of the applied voltage should be large enough to prevent polarity reversal.

SURGE VOLTAGE — At 85°C and at 5½ minute intervals, capacitors will withstand 1000 30-second applications of 115% WVDC. Following testing and at 25°C, capacitance will not have changed by more than ±10%. ESR and DCL will not exceed the values specified in Table B.

TEMPERATURE — No derating is required between −55°C and +85°C. Between 85°C and 125°C, derate linearly to 2/3 WVDC.

LIFE TEST — After 2000 hours at 85°C with rated WVDC applied, DCL and ESR values will not exceed those shown in Table B. Capacitance will not have changed by more than ±10% of the Table B values.

MILITARY SPECIFICATIONS — The TA Series is designed to meet or exceed the performance and test requirements of MIL-C-3965D, case styles CL66 and CL67.

MECHANICAL AND PART NUMBERS

CONSTRUCTION — Metal case, polyester sleeve (CL67), gelled electrolyte, glass-to-metal hermetic seal, solder coated nickel leads.

INSULATING SLEEVE — Polyester. Sleeves withstand the insulation resistance and dielectric withstanding tests specified in MIL-C-3965D.

LEADS — Leads are solder coated pure nickel wire suitable for soldering or welding. They withstand the pull and bend tests specified in MIL-C-3965D.

MARKING — All units are marked in accordance with MIL-C-3965D with the type designation, date code, source code, and polarity mark.

PART NUMBERS — Part numbers are shown in Table B for ±20% insulated styles. For ±10% or ±5% tolerance, substitute "K" or "J" for "M" in military type designations and "10" or "05" for "20" in Components part numbers, i.e. CL67BB680KPG and TA1-006-686-10. For uninsulated styles, substitute "66" for "67" in the military designation and add suffix "U" to the Components part number, i.e. CL66BN430JPG and TA3-100-436-05-U.

NEW DEVELOPMENTS IN FILM CAPACITORS *from*

COMPONENT RESEARCH COMPANY, INC.

PAGE Catalog

The 1970's will be marked by the advent of newer dielectric films with remarkable electrical properties of interest to circuit and network design engineers.

Using a unique lot-controlled manufacturing and test plan for capacitor evaluation, a comprehensive study of both older and newer film dielectrics for wound capacitors was started in 1969 and is continuing into the 70's.

This plan consists of carefully controlling a test lot of capacitors, from raw materials through final test, by unique lot numbers assigned to all materials used, and unique serial numbers for every capacitor made from these materials. The lot begins by selecting a set of dielectric rolls, and using all the capacitors manufactured from this set as a unique lot. The lot quantity may vary from 20 to 400 capacitors, depending on the value of the capacitors and the material used.

All lots of capacitors are subjected to temperature cycling and helium leak tests and given various levels of burn-in. Temperature cycling is repeated and temperature coefficient performed at as many as 10 temperature points. All capacitors are measured for % tolerance, % dissipation factor at 1 KHz and 10 KHz, and leakage current after each stress sequence. Using extremely stable and sensitive measurement equipment, observations of changes in parameters are recorded both numerically and graphically.

A variety of burn-in tests consisting of matrix plans with DC step voltages and step temperatures, are used to determine the point at which parameters change with time.

AC burn-in is also performed using sine wave stress from 60 Hz to 400 Hz, with additional tests planned to 25,000 Hz. Specially designed power supplies generating short-rise-time square waves are also used to subject the capacitors to frequencies from 100 Hz to 10 KHz, while current and voltage wave forms are monitored to study rise-time effects.

As a result of testing thousands of capacitors in this manner, Component Research Company has been able to observe and analyze mechanisms of capacitor change and degradation which normally escape attention.

CAPACITOR APPLICATIONS

QUESTION & ANSWER COLUMN

Miniature AC Capacitors

QUESTION: "I need a 3 mfd capacitor that will take a 300 volt peak-to-peak square wave at 400 Hz with less than 10°C heat rise. What is the smallest size hermetically sealed unit you have?"

ANSWER: Metallized polysulfone in 0.562 x 1.125 case. **SEE PAGES 21, 22**

High Reliability Teflon Capacitors

QUESTION: "I need small teflon capacitors, the size of your 05TJ, that can handle short-rise-time pulses which usually damage metallized teflon capacitors. After DC burn-in, AC square wave burn-in and 20 temperature cycles, the dissipation factor must be 0.03% or less."

ANSWER: Special 05TJ capacitors are excellent for this application. **SEE PAGE 20**

Miniaturized High Voltage Capacitors

QUESTION: "Can you fit a 0.25 mfd 1500 volts DC capacitor into a 0.670 x 1.875 hermetically sealed case? It must pass 250 hours at 85°C and 2400 VDC without failure and must exceed 250,000 megohms after test."

ANSWER: Yes, we believe these units can take even higher voltages. **SEE PAGE 20**

Zero Temperature Coefficient ±25 PPM/°C

QUESTION: "I would like to match a resistor and capacitor so that the RC product is ±0.25% maximum from —55°C to 125°C."

ANSWER: We can supply capacitors as close as ±0.1% from —55°C to 125°C. **SEE PAGE 21**

High Temperature Polystyrene

QUESTION: "Do you have special miniature polystyrene capacitors that can be operated to 105°C and withstand storage at 115°C?"

ANSWER: Yes we can, and in addition are testing at 125°C. **SEE PAGES 21, 22**

High Insulation Resistance

QUESTION: "Can you meet 250,000 megohms minimum at 85°C for low voltage polycarbonate capacitors and over 1,000,000 megohms for small teflon capacitors at 85°C?"

ANSWER: Yes, we can even go higher! **SEE PAGE 22**

Polysulfone and Polypropylene Capacitors

QUESTION: "Have you any test data that indicates these films can offer any improvements over conventional films?"

ANSWER: Yes, and we are accumulating much more. **SEE PAGES 20, 21, 22**

Availability

QUESTION: "I need odd-valued capacitors in close tolerances, such as 0.1103 ±0.25% 50 volts, and 0.3966 ±0.25% 100 volts. If I need about ten such values, how long will it take to get a dozen of each? These capacitors must be stable and capable of meeting any MIL-Spec."

ANSWER: Most orders of this type can be filled from stock within a few days, or custom-made within four weeks.

GENERAL INFORMATION

ORDERING INFORMATION

To expedite the ordering of prototype quantities we have listed 1-6 quantity prices. Immediate quotation for any quantity required will be given upon request. Our terms are ½% 10 days, Net 30, F.O.B. our plant. Minimum order is $10.00.

PATENT INFORMATION

CRC capacitors are exclusively manufactured under one or more of the following patents and additional patents pending: 3,238,428; 3,260,906; 3,292,063.

SPECIAL PRODUCTS AND SERVICES

HIGH RELIABILITY SCREENING

Your most critical requirements for Space or Missile quality capacitors can be met by following a standard or custom CRC-engineered quality test plan.

STRESS TESTED STERILIZATION

CRC capacitors are being supplied high temperature screened to meet long-voyage space requirements of the 1970's and 1980's.

MATCHED CAPACITOR SETS

Customers may purchase 0.5% or 1% tolerance capacitors and ask that we match them in sets of the same or different values to ±0.1% accuracy. You may also require that capacitors be supplied in pairs that track in temperature coefficient linearity as close as ±0.01% for capacitance change with temperature.

HIGH INSULATION RESISTANCE

Capacitors can be supplied measured at temperatures higher than 25°C to meet a special requirement. As an example, we make 30 volt Polycarbonate Capacitors which must exceed 250,000 megohms at 85°C. We can also supply capacitors that can exceed 1,000,000 megohms at 85°C and higher.

HOW TO SPECIFY COMPLETE PART NUMBER

Example 1—Part 05TA104AZSN shown above is a 50 volt, "TA" Teflon capacitor, 0.1mfd, ± 0.1% tolerance, with a grounded case, mylar sleeving, and gold-plated nickel leads.

Example 2—Part 1PL106F would be a 100 volt, "PL" Polycarbonate capacitor, 10mfd, ± 1% tolerance, standard isolated case, and tinned copperweld leads.

Example 3—Part 05PL1354DS would be a 50 volt polycarbonate capacitor, 1.35 mfd, ± 0.5%, standard case, sleeving, and tinned copperweld leads.

Note: 1354 represents 1,350,000 picofarads. The last digit, 4, indicates the number of zeros.

ELECTRICAL TEST INFORMATION

The high quality of CRC capacitors may be difficult to eval ate unless sufficiently sensitive and accurate equipment utilized in conjunction with proper measurement technique

Capacitance bridges equal to the General Radio 1620A are re ommended for best accuracy of capacitance and dissipation fa tor. The dissipation factor of capacitors in values above 1 m should be measured at 0.1 KHz rather than at 1 KHz which standard for smaller values, due to the high series resistanc of presently available bridges. When performing remote me surements in a test chamber the same problem, due to lea resistance, may also cause an apparent increase in the dissip tion factor readings.

Insulation resistance measurement is performed by Compo nent Research Co. using leakage current methods which ar repeatable to less than 1 picoamp for capacitors less than 0. mfd. Larger values require adequate charge time to minimiz dielectric absoption effects. Guard boxes are used to perforn leakage current and dielectric absorption measurements.

INSTALLATION INSTRUCTIONS

To prevent damage to the hermetic seal joint, use a tweeze type heat sink between the soldering iron and solder bead when soldering within ¼" of beads.

Prior to lead bending or twisting, protect glass seals and solde joints by gripping with a small pliers, area of leads near solde beads.

Contaminating films on the glass seal surfaces may occur during customer handling and installation of capacitors. To preserve the high insulation resistance inherent in CRC capacitors, clean the glass seal surfaces thoroughly with acetone or a chlorinated hydrocarbon fluid.

CAPACITOR CONSTRUCTION INFORMATION

- All standard types in Catalog "E" are hermetically sealed in metal tubular cases with both terminals electrically isolated from the case. Capacitors are 100% helium leak tested for true hermetic seal.
- #22 AWG wire leads are used for .312 and smaller case diameters.
  #20 AWG wire leads are used for .400 and larger diameters.
- Lead material may be gold plated nickel per MIL-STD-1276, Type N2 or tinned copper clad steel wire as noted in the capacitor specifications.
- When mylar shrinkfit sleeving is desired, add "S" to the basic part number as shown to the left.

MECHANICAL TOLERANCES AND NOTES

A Length "A" is ± .03" max.

B Diameter "B" is ± .01" max. (without mylar sleeving)

C Length "C" is 0.2" max. greater than "A"

D Diameter "D" is .01" max. greater than "B" (when sleeving is put on case)

E Length "E" is maximum of .062" that solder wick may run up gold plated leads from solder bead.

TJ TEFLON CAPACITORS

COMPONENT RESEARCH COMPANY, INC.

Teflon capacitors meet the highest quality standards the industry. TJ capacitors are power aged, stabilized, 0% reliability screened per Level "A" shown on Flow in page 2 and certified for performance. Superior ctrical characteristics plus thorough screening, make these capacitors especially useful for Space and high reliability Military applications. Special TJ capacitors can be supplied with zero temperature coefficient ±10 PPM/°C to ±100 PPM/°C for a limited or wide temperature range.

TJ SPECIFICATIONS

ERATING TEMPERATURE —62°C to 125°C at full rated age

MPERATURE COEFFICIENT OF CAPACITANCE

.4% max at —55°C	0.0% ref. at 25°C
.25% max at —25°C	—0.15% max at 55°C
.2% max at —10°C	—0.25% max at 85°C
.1% max at 0°C	—0.4% max at 125°C

ABILITY—Capacitance values measured at any two corresnding temperature points taken in five successive tempera- e cycles shall be as follows:

Range	Retrace
—10°C to 85°C	0.01% max
—62°C to 125°C	0.05% max

SULATION RESISTANCE measured from terminal to termi- at rated voltage, and 5 minutes, maximum charge time. values greater than 1 mfd, allow an additional minute/mfd erge time.

	MINIMUM IR				
Range	25°C	55°C	85°C	105°C	125°C
01 to 0.1 mfd n megohms)	5,000,000	5,000,000	2,000,000	1,000,000	250,000
reater than 1 mfd (in egohms ÷ mfd)	500,000	500,000	200,000	100,000	25,000

ELECTRIC ABSORPTION—0.02% max at 25°C.

SSIPATION FACTOR—0.03% max at 1 KHz and 25°C. Values eater than 1 mfd measure at 0.1 KHz.

ELECTRIC STRENGTH—200% of rated volts.

NSTRUCTION—Hermetically sealed, extended metal film ctrodes, leads isolated from case. Lead material is nickel, ld-plated, per Mil-Std-1276, Type N2.

AL TEST—1 x 10^{-6} ATM-CC/SEC max leak rate.

IVIRONMENTAL—Capacitors shall meet all applicable reirements of Mil-C-19978, including Grade 3 vibration.

R ADDITIONAL DETAILS, SEE GENERAL INFORMATION, PAGE 3

LEVEL "A" QUALITY ASSURANCE

"TJ" TEFLON CAPACITORS ARE 100% PROCESSED AND TESTED AS FOLLOWS:

RELIABILITY SCREENING

1. *Stabilization by temperature cycling from —62°C to 125°C, 5 cycles minimum.*
2. *Mass spectrometer hermetic seal test per MIL-STD-202, Method 112, condition C, procedure III A.*
3. *Dielectric strength test at a minimum of 200% of rated voltage, lead to lead and leads to case.*
4. *Insulation resistance at rated voltage and 25°C.*
5. *Capacitance tolerance at 1KHz and 25°C.*
6. *Dissipation factor at 25°C.*

POWER AGING AND STABILIZATION

7. *Burn-in at 125°C and 140% of rated voltage for a minimum of 48 hours.*
8. *Verification of stability by temperature cycling from —62°C to 125°C, 20 cycles minimum.*

PERFORMANCE CERTIFICATION

9. *Dielectric strength test at a minimum of 200% of rated voltage, lead to lead and leads to case.*
10. *Insulation resistance at rated voltage and 25°C.*
11. *Capacitance tolerance at 1KHz and 25°C.*
12. *Dissipation factor at 25°C.*
13. *Temperature coefficient measured from —55°C to 125°C at a minimum of 5 temperature points.*
14. *Visual inspection for dimensions, marking, and packaging.*
15. *Traceability to production and test records by permanent marking of parts with lot control number.*
16. *Process and inspection data is maintained on file per NPC-200-3 and Mil-Q-9858 quality control standards.*
17. *Capacitors are serialized and packaged with certified test data to accompany each shipment.*

TA TEFLON CAPACITORS

TA teflon capacitors are used in aircraft and space guidance applications which require low loss, low temperature coefficient, excellent stability and reliability. The temperature coefficient slope from —55°C to +125°C is approximately —50 PPM/°C ±50 PPM. The TA capacitors are reliability screened per code **LEVEL B** shown on Flow Plan Page 2. See types TC and TJ teflon for higher reliability and performance.

TA SPECIFICATIONS

OPERATING TEMPERATURE

—62°C to 125°C at full rated voltage

TEMPERATURE COEFFICIENT OF CAPACITANCE

+0.6%	Max at	—55°C
+0.4%	Max at	—25°C
+0.3%	Max at	—10°C
+0.2%	Max at	0°C
0.0%	Reference	25°C

—0.5%	Max at	85°C
—0.6%	Max at	125°C

STABILITY

When temperature cycled from —62°C to 125°C for 5 temperature cycles, capacitance drift measured after stabilization shall not exceed:

Range	Retrace
—10°C to 85°C	0.02% Max
—62°C to 125°C	0.1% Max

INSULATION RESISTANCE measured from terminal to terminal at rated voltage, and 5 minutes maximum charge time. For values greater than 1 mfd, allow an additional minute/mfd charge time.

	MINIMUM IR				
Range	25°C	55°C	85°C	105°C	125°C
.001 to 0.1 mfd (in megohms)	5,000,000	5,000,000	2,000,000	1,000,000	250,000
Greater than 0.1 mfd (in megohms ÷ mfd)	500,000	500,000	200,000	100,000	25,000

DIELECTRIC ABSORPTION—0.02% maximum at 25°C.

DIELECTRIC STRENGTH—200% of rated voltage.

DISSIPATION FACTOR 0.03% max at 1 KHz and 25°C. Values greater than 1 mfd measure at 0.1 KHz.

CONSTRUCTION

Teflon dielectric, hermetically sealed, extended metal film electrodes, leads isolated from case. Lead material is nickel, gold-plated, per Mil-Std-1276, Type N2.

SEAL TEST — 1 x 10^{-6} ATM-CC/SEC max leak rate.

ENVIRONMENTAL

Capacitors shall meet all applicable requirements of Mil-C-19978, including Grade 3 vibration.

FOR ADDITIONAL DETAILS,
SEE GENERAL INFORMATION SECTION, PAGE 3

LEVEL "B" QUALITY ASSURANCE

"TA" TEFLON CAPACITORS ARE 100% PROCESSED AND TESTED AS FOLLOWS:

1. *Stabilization by temperature cycling from —62°C to 125°C, 5 cycles minimum.*
2. *Mass spectrometer hermetic seal test per MIL-STD-202, Method 112, condition C. procedure III A.*
3. *Dielectric strength test at a minimum of 200% of rated voltage, lead to lead and leads to case.*
4. *Insulation resistance at rated voltage and 25°C.*
5. *Capacitance tolerance at 1KHz and 25°C.*
6. *Dissipation factor at 25°C.*
7. *Visual inspection for dimensions, marking and packaging.*
8. *Traceability to production and test records by permanent marking of parts with lot control number.*
9. *Process and inspection data is maintained on file per NPC-200-3 and Mil-Q-9858 quality control standards.*

TC TEFLON CAPACITORS

Type TC teflon capacitors are high reliability screened per **LEVEL "A"** shown on Flow Plan page 2 and are qualified to meet the most stringent specifications. Each capacitor bears a unique serial number and is shipped with data certifying to 0.1% maximum capacitance drift after exposure to 5 temperature shock cycles from −62°C to +125°C. The TC capacitors are available in the same voltage ratings and case sizes as type "TA," level B capacitors. For increased screening and lower temperature coefficient see type TJ, level A capacitors.

TC SPECIFICATIONS

OPERATING TEMPERATURE −62°C to 125°C at full rated Voltage.

TEMPERATURE COEFFICIENT OF CAPACITANCE

+0.7% max at −55°C	0.0% ref. at 25°C
+0.5% max at −25°C	−0.25% max at 55°C
+0.3% max at −10°C	−0.50% max at 85°C
+0.25% max at 0°C	−0.60% max at 125°C

STABILITY — Capacitance values measured at any two corresponding temperature points taken in five successive temperature cycles shall be as follows:

Range	Retrace
0°C to 50°C	0.02% max
−10°C to 85°C	0.05% max
−62°C to 125°C	0.1% max

INSULATION RESISTANCE measured from terminal to terminal at rated voltage, and 5 minutes maximum charge time. For values greater than 1 mfd, allow an additional minute/mfd charge time.

	MINIMUM IR				
Range	25°C	55°C	85°C	105°C	125°C
.001 to 0.1 mfd (in megohms)	5,000,000	5,000,000	2,000,000	1,000,000	250,000
Greater than 0.1 mfd (in megohms ÷ mfd)	500,000	500,000	200,000	100,000	25,000

DIELECTRIC ABSORPTION — 0.02% max at 25°C.

DISSIPATION FACTOR — 0.03% max at 1 KHz and 25°C. Values greater than 1 mfd measure at 0.1 KHz.

CONSTRUCTION — Teflon dielectric, hermetically sealed, extended metal film electrodes, leads isolated from case. Lead material is nickel, gold-plated, per Mil-Std-1276, Type N2.

SEAL TEST — 1 x 10^{-6} ATM-CC/SEC max leak rate.

ENVIRONMENTAL — Capacitors shall meet all applicable requirements of Mil-C-19978, including Grade 3 vibration. For additional details, see General Information Section, Page 3.

LEVEL "A" QUALITY ASSURANCE

"TC" TEFLON CAPACITORS ARE 100% PROCESSED AND TESTED AS FOLLOWS:

RELIABILITY SCREENING

1. Stabilization by temperature cycling from —62°C to 125°C, cycles minimum.

2. Mass spectrometer hermetic seal test per MIL-STD-202, Meth 112, condition C. procedure III A.

3. Dielectric strength test at a minimum of 200% of rated voltag lead to lead and leads to case.

4. Insulation resistance at rated voltage and 25°C.

5. Capacitance tolerance at 1KHz and 25°C.

6. Dissipation factor at 25°C.

POWER AGING

7. Burn-in at 125°C and 140% of rated voltage for a minimum 48 hours.

8. Verification of stability by temperature cycling from —62°C 125°C, 5 cycles minimum.

PERFORMANCE CERTIFICATION

9. Dielectric strength test at a minimum of 200% of rated voltag lead to lead and leads to case.

10. Insulation resistance at rated voltage and 25°C.

11. Capacitance tolerance at 1KHz and 25°C.

12. Dissipation factor at 25°C.

13. Capacitors are 100% tested for 0.1% maximum drift wit cycling from —62°C to 125°C.

14. Visual inspection for dimensions, marking, and packaging.

15. Traceability to production and test records by permaner marking of parts with lot control number.

16. Process and inspection data is maintained on file per NPC-200- and Mil-Q-9858 quality control standards.

17. Capacitors are serialized and packaged with certified test dat to accompany each shipment.

TL TEFLON CAPACITORS

Teflon capacitors are used in many military and industrial nputer applications where the temperature range is beyond capability of polystyrene and a relatively low loss capacitor needed. Type TL teflon capacitors are screened to **LEVEL C** ecifications shown on Flow Plan Page 2. For higher reliability type TA teflon.

TL SPECIFICATIONS

ERATING TEMPERATURE —62°C to 125°C at full rated tage.

MPERATURE COEFFICIENT OF CAPACITANCE ± 1% Max 5°C to 125°C

ABILITY — Capacitance values measured at any two corre- onding temperature points taken in five successive tempera- e cycles shall be as follows:

Range	Retrace
—10°C to 85°C	0.05% Max
—62°C to 125°C	0.25% Max

SULATION RESISTANCE measured from terminal to terminal rated voltage, and 5 minutes maximum charge time. For lues greater than 1 mfd, allow an additional minute/mfd arge time.

	MINIMUM IR				
Range	25°C	55°C	85°C	105°C	125°C
001 to 0.1 mfd in megohms)	1,000,000	1,000,000	500,000	250,000	100,000
Greater than .1 mfd (in negohms ÷ mfd)	100,000	100,000	50,000	25,000	10,000

IELECTRIC ABSORPTION 0.1% Max at 25°C

ISSIPATION FACTOR 0.15% Max at 1KHz and 25°C

IELECTRIC STRENGTH 200% of rated voltage

ONSTRUCTION — Teflon dielectric, hermetically sealed, ex- nded metal film electrodes, leads isolated from case. Leads re solderable gold-plated nickel or tinned copper-weld as vailable from stock at time of shipment.

EAL TEST — 1 x 10^{-5} ATM-CC/SEC max leak rate.

OR ADDITIONAL DETAILS, SEE GENERAL INFORMATION SECTION, PAGE 3

LEVEL "C" QUALITY ASSURANCE

"TL" TEFLON CAPACITORS ARE 100% PROCESSED AND TESTED AS FOLLOWS:

1. Mass spectrometer hermetic seal test per MIL-STD-202, Method 112, condition C, procedure III A.
2. Dielectric strength test at a minimum of 200% of rated voltage, lead to lead and leads to case.
3. Insulation resistance at rated voltage and 25°C.
4. Capacitance tolerance at 1 KHz and 25°C.
5. Dissipation factor at 1 KHz and 25°C.
6. Visual inspection for dimensions, marking, and packaging.

TU TEFLON CAPACITORS

COMPONENT RESEARCH COMPANY, INC.

TU Teflon foil capacitors are unexcelled for high insulation resistance, low dielectric absorption and low dissipation factor over a wide temperature range. The TU capacitors are reliability screened per **LEVEL "B"** shown on Flow Plan Page 2; however, specials are available with Level "A" screening. We can also supply very high quality custom capacitors in any value from 100 Pf to 100 MFD and at higher voltages for research or production applications.

TU SPECIFICATIONS

OPERATING TEMPERATURE—62°C to 125°C at full rated voltage.

TEMPERATURE COEFFICIENT OF CAPACITANCE

+0.8% Max at	−55°C	0.0% Reference at	25°C
+0.6% Max at	−25°C	−0.2% Max at	55°C
+0.3% Max at	−10°C	−0.5% Max at	85°C
+0.2% Max at	0°C	−0.8% Max at	125°C

STABILITY—Capacitance values measured at any two corresponding temperature points taken in five successive temperature cycles shall be as follows:

Range	Retrace
−10°C to 85°C	0.05% Max
−62°C to 125°C	.25% Max

INSULATION RESISTANCE measured from terminal to terminal at rated voltage, and 5 minutes maximum charge time. For values greater than 1 mfd, allow an additional minute/mfd charge time.

	MINIMUM IR				
Range	25°C	55°C	85°C	105°C	125°C
.001 to 0.1 mfd (in megohms)	10,000,000	5,000,000	3,000,000	1,500,000	300,000
Greater than 0.1 mfd (in megohms ÷ mfd)	1,000,000	500,000	300,000	150,000	30,000

DIELECTRIC ABSORPTION—0.01% Max at 25°C.

DISSIPATION FACTOR—0.005% Max as 1KHz and 25°C

DIELECTRIC STRENGTH—200% of rated volts.

CONSTRUCTION—Teflon dielectric, extended foil electrodes, hermetically sealed, leads isolated from case, leads are nickel, gold-plated, per Mil Std 1276 Type N2.

SEAL TEST—1 x 10^{-6} ATM-CC/SEC Max leak rate.

ENVIRONMENTAL—Capacitors shall meet all applicable requirements of Mil-C-19978 including Grade 3 vibration.

FOR ADDITIONAL DETAILS, SEE GENERAL INFORMATION SECTION, PAGE 3

LEVEL "B" QUALITY ASSURANCE

"TU" TEFLON CAPACITORS ARE 100% PROCESSED AND TESTED AS FOLLOWS:

1. Stabilization by temperature cycling from −62°C to 125°C 5 cycles minimum.
2. Mass spectrometer hermetic seal test per MIL-STD-202 Method 112, condition C. procedure III A.
3. Dielectric strength test at a minimum of 200% of rated voltage, lead to lead and leads to case.
4. Insulation resistance at rated voltage and 25°C.
5. Capacitance tolerance at 1KHz and 25°C.
6. Dissipation factor at 1KHz and 25°C.
7. Visual inspection for dimensions, marking, and packaging.
8. Traceability to production and test records by permanent marking of parts with lot control number.
9. Process and inspection data is maintained on file per NPC 200-3 and Mil-Q-9858 quality control standards.

TF TEFLON CAPACITORS

COMPONENT RESEARCH COMPANY, INC.

TF flon foil capacitors are extremely low loss capacitor or use over a wide temperature range. The TF capitors are reliability screened per **LEVEL "C"** shown on ow Plan Page 2. Custom capacitors can be furnis d with special values, higher voltage ratings and spe al case configuration. See Type TU for higher, Lev "B" reliability.

TF SPECIFICATIONS

OP ATING TEMPERATURE
–C to 125°C at full rated voltage.

TE PERATURE COEFFICIENT OF CAPACITANCE
25 reference ± 1.2% maximum from –62°C to 125°C.

ST ILITY — Capacitance values measured at any two co sponding temperature points taken in five succe ve temperature cycles shall be as follows:

Range	Retrace
—10°C to 85°C	0.1% Max
—62°C to 125°C	0.25% Max

I ULATION RESISTANCE measured from terminal to t inal at rated voltage, and 5 minutes maximum c ge time. For values greater than 1 mfd, allow an a tional minute/mfd charge time.

	MINIMUM IR				
Range	25°C	55°C	85°C	105°C	125°C
L to 0.1 mfd (megohms)	3,000,000	2,000,000	1,000,000	500,000	100,000
ater than mfd (in ohms ÷ mfd)	300,000	200,000	100,000	50,000	10,000

D LECTRIC ABSORPTION — 0.03% at 25°C

D SIPATION FACTOR — 0.02% Max at 1KHz and 25°C

D LECTRIC STRENGTH — 200% of rated volts

C NSTRUCTION— "FEP" teflon dielectric film, extended f electrodes, hermetically sealed with leads isolated f n case, leads are tinned copperweld.

S L TEST — 1 x 10^{-5} ATM-CC/SEC max leak rate.

E IRONMENTAL — Capacitors shall meet all applicable r uirements of Mil-C-19978.

ADDITIONAL DETAILS, SEE GENERAL INFORMATION SECTION, PAGE 3

LEVEL "C" QUALITY ASSURANCE

"TF" TEFLON CAPACITORS ARE 100% PROCESSED AND TESTED AS FOLLOWS:

. *Stabilization by temperature cycling from —62°C to 125°C, 5 cycles minimum.*
. *Mass spectrometer hermetic seal per MIL-STD-202, Method 112, condition C, procedure III A.*
. *Dielectric strength test at a minimum of 200% of rated voltage, lead to lead and leads to case.*
. *Insulation resistance at rated voltage and 25°C.*
. *Capacitance tolerance at 1KHz and 25°C.*
6. *Dissipation factor at 1KHz and 25°C.*
7. *Visual inspection for dimensions, marking, and packaging.*
8. *Traceability to production and test records by permanent marking of parts with lot control number.*
9. *Process and inspection data is maintained on file per NPC-200-3 and Mil-Q-9858 quality control standards.*

PL POLYCARBONATE
AC TESTED CAPACITORS

NEW

100% SCREENED BY AC SQUARE WAVE HIPOT TEST

PL Polycarbonate Capacitors are reliability screened per **LEVE "B"** shown on Page 2. In addition, all capacitors are subjected to special high stress AC square wave voltage which has a peak-to peak level 300% higher than the rated DC working voltage of th capacitor. As an example, 03PL capacitors receive about 200 volt peak-to-peak at 100 Hz and 4PL capacitors receive approximatel 1200 volts peak-to-peak. The purpose of this test is to furthe enhance Polycarbonate Capacitor reliability and assure that th capacitors can withstand AC stresses.

PL SPECIFICATIONS

OPERATING TEMPERATURE —62°C to 100°C at full rated voltage. Derate linearly from 100°C to 50% of rated voltage at 125°C.

TEMPERATURE COEFFICIENT OF CAPACITANCE

−1.5% Max. at −55°C
−0.5% Max. at −25°C
−0.35% Max. at −10°C
−0.25% Max. at 0°C
0.0% Reference at 25°C
+0.2% Max. at 55°C
+0.5% Max. at 85°C
+1.0% Max. at 125°C

STABILITY — Capacitance values measured at any two corresponding temperature points taken in five successive temperature cycles shall be as follows:

Range	Retrace
—10°C to 85°C	0.05% Max.
—62°C to 125°C	0.25% Max.

INSULATION RESISTANCE measured from terminal to terminal at rated voltage, and 5 minutes maximum charge time. For values greater than 1 mfd, allow an additional minute/mfd charge time.

	MINIMUM IR TYPE 03PL, 05PL, 1PL				
Range	25°C	55°C	85°C	105°C	125°C
.001 to 0.1 mfd (in megohms)	3,000,000	2,000,000	1,000,000	300,000	10,000
Greater than 0.1 mfd (in megohms ÷ mfd)	300,000	200,000	100,000	30,000	1,000

	MINIMUM IR TYPE 2PL, 4PL				
Range	25°C	55°C	85°C	105°C	125°C
.001 to 0.1 mfd (in megohms)	4,000,000	2,500,000	500,000	200,000	10,000
Greater than 0.1 mfd (in megohms ÷ mfd)	400,000	250,000	50,000	20,000	1,000

DIELECTRIC ABSORPTION — 0.2% Max. at 25°C

DISSIPATION FACTOR — 0.2% max at .1 KHz and 25°C. Values greater than 1 mfd measure at 0.1 KHz.

DIELECTRIC STRENGTH — 200% of rated volts.

CONSTRUCTION — Polycarbonate dielectric, extended metal film electrodes, hermetically sealed, leads isolated from case. Leads may be tinned copperweld or gold-plated nickel per Mil Std 1276 type N2.

SEAL TEST — 1 x 10^{-6} ATM-CC/SEC Max leak rate.

ENVIRONMENTAL — Capacitors shall meet all applicable requirements of Mil-C-19978 including grade 3 vibration.

FOR ADDITIONAL DETAILS SEE GENERAL INFORMATION SECTION, PAGE 3

LEVEL "B" QUALITY ASSURANCE

"PL" Polycarbonate Capacitors are 100% processed and tested as follows:

1. Stabilization by temperature cycling from —62°C to 125°C, 5 cycles minimum.
2. Mass spectrometer hermetic seal test per MIL-STD-202, Method 112, condition C, procedure IIIA.
3. DC Dielectric Strength—apply 200% of rated DC from lead to lead and leads to case for one minute.

3A. AC Dielectric Strength—apply 100 Hz square wave from lead to lead at a minimum peak to peak voltage of 3 x rated DC voltage for one minute.

4. Insulation resistance at rated voltage and 25°C.
5. Capacitance tolerance at 1 KHz and 25°C.
6. Dissipation factor at 25°C.
7. Visual inspection for dimensions, marking, and packaging.
8. Traceability to production and test records by permanent marking of parts with lot control number.
9. Process and inspection data is maintained on file per NPC-200-3 and MIL-Q-9858 quality control standards.

PK POLYCARBONATE
AC TESTED CAPACITORS

PK Polycarbonate Capacitors are high reliability screened per **LEVEL "A"** shown on Flow Plan Page 2 and are in widespread use in space and other critical applications. All capacitors receive a high stress AC square wave voltage of approximately 300% higher peak to peak voltage than their DC ratings for additional screening purposes. The PK capacitors are available in all the voltage ratings and case sizes listed for Type PL Polycarbonate Capacitors on Page 12. Contact us for special capacitors selected for zero TC ±30 PPM from −10°C to 125°C in these same case sizes.

PK SPECIFICATIONS

OPERATING TEMPERATURE
−62°C to 100°C at full rated voltage. Derate linearly from 100°C to 50% of rated voltage at 125°C.

TEMPERATURE COEFFICIENT OF CAPACITANCE — 25°C Reference

−0.75% ±0.25% at −55°C
−0.35% ±0.15% at −25°C
−0.25% ±0.15% at −10°C
−0.15% ±0.1% at 0°C
+0.05% ±0.1% at 55°C
+0.15% ±0.15% at 85°C
+0.25% ±0.25% at 125°C

STABILITY
Capacitance values measured at any two corresponding temperature points taken in five successive temperature cycles shall be as follows:

Range	Retrace
−10°C to 85°C	0.03% Max
−62°C to 125°C	0.2% Max

INSULATION RESISTANCE — measured from terminal to terminal at rated voltage, and 5 minutes maximum charge time. For values greater than 1 mfd, allow an additional minute/mfd charge time.

	MINIMUM IR				
Range	25°C	55°C	85°C	105°C	125°C
.001 to 0.1 mfd (in megohms)	3,000,000	2,000,000	1,000,000	300,000	20,000
Greater than 1 mfd (in megohms ÷ mfd)	300,000	200,000	100,000	30,000	2,000

DIELECTRIC ABSORPTION — 0.2% Max at 25°C.

DISSIPATION FACTOR — 0.2% max at 1 KHz and 25°C. Values greater than 1 mfd measure at 0.1 KHz.

DIELECTRIC STRENGTH — 200% of rated voltage.

CONSTRUCTION — Polycarbonate dielectric, hermetically sealed, extended metal film electrodes, leads isolated from case, leads may be tinned copperweld or nickel, gold plated per Mil-Std 1276, Type N2.

SEAL TEST — 1 x 10^{-6} ATM-CC/SEC Max leak rate.

ENVIRONMENTAL — Capacitors shall meet all applicable requirements of Mil-C-19978, including grade 3 vibration.

FOR ADDITIONAL DETAILS, SEE GENERAL INFORMATION SECTION, PAGE 3

LEVEL "A" QUALITY ASSURANCE

PK Polycarbonate Capacitors are 100% processed and tested as follows:

RELIABILITY SCREENING

1. Stabilization by temperature cycling from −62°C to 125 5 cycles minimum.
2. Mass spectrometer hermetic seal test per MIL-STD-2 Method 112, condition C. procedure 111A.
3. DC dielectric strength—apply 200% of rated DC from le to lead and from leads to case for one minute.

3A. AC dielectric strength—apply 100 Hz square wave from le to lead at a minimum peak to peak voltage of 3 x rat DC voltage for one minute.

4. Insulation resistance at rated voltage and 25°C.
5. Capacitance tolerance at 1 KHz and 25°C.
6. Dissipation factor at 25°C.

POWER AGING AND STABILIZATION

7. Burn-in at 125°C and 140% of rated voltage for a minimu of 48 hours.
8. Verification of stability by temperature cycling from −62° to 125°C, 5 cycles minimum.

PERFORMANCE CERTIFICATION

9. Dielectric strength test at a minimum of 200% of rated vol tage, lead to lead and leads to case.
10. Insulation resistance at rated voltage and 25°C.
11. Capacitance tolerance at 1 KHz and 25°C.
12. Dissipation factor at 25°C.
13. Temperature coefficient measured from −55°C to 125°C a a minimum of 5 temperature points. (Performed on lo sampling basis, minimum 10 pieces per lot.)
14. Visual inspection for dimensions, marking, and packaging
15. Traceability to production and test records by permanen marking of parts with lot control number.
16. Process and inspection data is maintained on file pe NPC-200-3 and Mil-Q-9858 quality control standards.
17. Capacitors are serialized and packaged with certified tes data to accompany each shipment.

PV POLYCARBONATE
AC TESTED CAPACITORS

ype 03PV Polycarbonate Film Capacitors are high reliability creened in accordance with the Level "A" flow plan shown n Page 2. In addition, we have added a special AC square ave stress test, shown in the Quality Assurance section, to nprove the 03PV capacitor reliability for pulsating voltage pplications.

he 03PV capacitors are the highest performance, highest reliability film capacitors available in subminiature size and are in idespread use in space, aircraft, and missile systems.

ustom capacitors can be provided with selected temperature oefficient, higher insulation resistance and special case styles. ee Type PK for higher voltage rated types.

PV SPECIFICATIONS

PERATING TEMPERATURE —55°C to 100°C at 30VDC. Derate nearly by 50% to 125°C.

EMPERATURE COEFFICIENT OF CAPACITANCE

—1.2% Max. at —55°C	±.15% Max. at 55°C
—0.25% Max. at —10°C	±.25% Max. at 85°C
0% Ref. at 25°C	±.50% Max. at 125°C

TABILITY—Capacitance values measured at any two corresponding temperature points taken in five successive temperature cycles shall be as follows:

Range	Retrace
—10°C to 85°C	0.03% Max.
—62°C to 125°C	0.2% Max.

NSULATION RESISTANCE—measured from terminal to terminal t rated voltage, and 5 minutes maximum charge time. For alues greater than 1 mfd, allow an additional minute/mfd harge time.

	MINIMUM IR				
Range	25°C	55°C	85°C	105°C	125°C
01 to 0.1 mfd n megohms)	4,000,000	2,000,000	1,000,000	500,000	50,000

‡ Need not exceed IR values for 0.1 mfd or less.

DIELECTRIC ABSORPTION—0.2% Max. at 25°C.

DISSIPATION FACTOR—0.2% max at 1 KHz and 25°C. Values reater than 1 mfd measure at 0.1 KHz.

DIELECTRIC STRENGTH—400% of rated voltage.

ONSTRUCTION—Polycarbonate dielectric, extended metal film lectrodes, hermetically sealed, leads isolated from case. Leads re gold plated nickel per Mil Std 1276 type N2.

EAL TEST—1 x 10^{-6} ATM-CC/SEC Max leak rate.

ENVIRONMENTAL—Capacitors shall meet all applicable requirements of Mil-C-19978 including grade 3 vibration.

OR ADDITIONAL DETAILS, SEE GENERAL INFORMATION SECTION, PAGE 3

LEVEL "A" QUALITY ASSURANCE

"PV" POLYCARBONATE CAPACITORS ARE 100% PROCESSED AND TESTED AS FOLLOWS:

RELIABILITY SCREENING

1. Stabilization by temperature cycling from —62°C to 125°C, 5 cycles minimum.
2. Mass spectrometer hermetic seal test per MIL-STD-202, method 112, condition C, procedure 111A.
3. DC Dielectric strength test—apply 300% of rated DC volts from lead to lead and leads to case.

3A. AC Dielectric strength test—apply 100 Hz square wave from lead to lead at a minimum peak to peak voltage of 400% of rated DC voltage for one minute.

4. Insulation resistance at rated voltage and 25°C.
5. Capacitance tolerance at 1 KHz and 25°C.
6. Dissipation factor at 25°C.

POWER AGING AND STABILIZATION

7. Burn-in at 125°C and 140% of rated voltage for a minimum of 48 hours.
8. Verification of stability by temperature cycling from —62°C to 125°C, 5 cycles minimum.

PERFORMANCE CERTIFICATION

9. Dielectric strength test at a minimum of 400% of rated voltage lead to lead and leads to case.
10. Insulation resistance at rated voltage and 25°C.
11. Capacitance tolerance at 1 KHz and 25°C.
12. Dissipation factor at 25°C.
13. Temperature coefficient measured from —55°C to 125°C at a minimum of 5 temperature points. (Performed on lot sampling basis, minimum 10 pieces per lot.)
14. Visual inspection for dimensions, marking, and packaging.
15. Traceability to production and test records by permanent marking of parts with lot control number.
16. Process and inspection data is maintained on file per NPC-200-3 and Mil-Q-9858 quality control standards.
17. Capacitors are serialized and packaged with certified test data to accompany each shipment.

PG POLYCARBONATE CAPACITORS

PG Polycarbonate Capacitors exceed MIL-Specification quality capacitors and are widely used for industrial and military applications. The PG capacitors utilize the patented CRC supported winding and stress-free lead design which has been fully qualified in many extensive test programs. The PG capacitors are reliability screened per **LEVEL "C"** shown on Flow Plan Page 2. See Types PL, PK and PV for higher reliability level.

PG SPECIFICATIONS

OPERATING TEMPERATURE — −62°C to 100°C at full rated voltage, derate linearly from 100°C to 50% of rated voltage at 125°C.

TEMPERATURE COEFFICIENT OF CAPACITANCE —

± 2% max −55°C to 125°C
± 1% max −25°C to 85°C
±0.5% max 0°C to 55°C

STABILITY — Capacitance values measured at any two corresponding temperature points taken in five successive temperature cycles shall be as follows:

Range	Retrace
−10°C to 85°C	0.25% max
−62°C to 125°C	0.50% max

INSULATION RESISTANCE—measured from terminal to terminal at rated voltage, and 5 minutes maximum charge time. For values greater than 1 mfd, allow an additional minute/mfd charge time.

	MINIMUM IR				
Range	25°C	55°C	85°C	105°C	125°C
.001 to 0.1 mfd (in megohms)	1,000,000	500,000	100,000	50,000	10,000
Greater than 0.1 mfd (in megohms ÷ mfd)	100,000	50,000	10,000	5,000	1,000

DIELECTRIC ABSORPTION — 0.2% max at 25°C.

DISSIPATION FACTOR — 0.3% max at 1 KHz and 25°C. Values greater than 1 mfd measure at 0.1 KHz.

DIELECTRIC STRENGTH — 200% of rated volts.

CONSTRUCTION — Polycarbonate dielectric, extended metal film electrodes, hermetically sealed, leads isolated from case. Leads may be tinned copperweld or gold-plated nickel per Mil Std 1276 type N2.

SEAL TEST — 1×10^{-5} ATM-CC/SEC max leak rate.

ENVIRONMENTAL — Capacitors shall meet all applicable requirements of MIL-C-19978 including grade 3 vibration.

FOR ADDITIONAL DETAILS, SEE GENERAL INFORMATION SECTION, PAGE 3

LEVEL "C" QUALITY ASSURANCE

"PG" POLYCARBONATE CAPACITORS ARE 100% PROCESSED AND TESTED AS FOLLOWS:

1. *Stabilization by temperature cycling from −62°C to 125°C, 2 cycles minimum.*
2. *Mass spectrometer hermetic seal test per MIL-STD-202, method 112, condition C, procedure III A.*
3. *Dielectric strength test at a minimum of 200% of rated voltage, lead to lead, leads to case.*
4. *Insulation resistance at rated voltage and 25°C.*
5. *Capacitance tolerance at 1 KHz and 25°C.*
6. *Dissipation factor at 25°C.*
7. *Visual inspection for dimensions, marking and packaging.*

PQ POLYCARBONATE • CORDWOOD CAPACITORS • TQ TEFLON

HERMETICALLY SEALED

MECHANICAL TOLERANCES AND NOTES

- **A** Length "A" is ±.03" max.
- **B** Diameter "B" is ±.01" max. (without mylar sleeving)
- ****C** Length "C" is 0.2" max. greater than "A"
- **D** Diameter "D" is .01" max. greater than "B" (when sleeving is put on case)
- **E** Length "E" is maximum of .062" that solder wick may run up gold plated leads from solder bead.

PQ POLYCARBONATE

Type PQ Polycarbonate Capacitors, the most compact high reliability film capacitors available, have a reduced bead to bead length for cordwood applications.

PQ SPECIFICATIONS—Same as for Type PG, see Page 15.

RELIABILITY—Level "C," see Flow Plan Page 2.

LEAD MATERIAL—Tinned copper clad steel is standard. Also available with gold plated nickel. See Page 3.

SPECIALS—Higher reliability screening including AC HiPot testing can be supplied.

TQ TEFLON

Type 05TQ Teflon Capacitors, the smallest high quality teflon film capacitors available, have a reduced bead to bead length for cordwood applications.

05TQ SPECIFICATIONS—Same as 05TA, see Page 5, except for slightly higher temperature coefficient and a maximum dissipation factor of 0.05%. Specials are also available at higher voltage ratings.

RELIABILITY—Level "B." See Flow Plan Page 2.

LEAD MATERIAL—Gold plated nickel is standard. Also available with tinned copper-clad steel leads. See Page 3.

PA POLYSTYRENE CAPACITORS

P Polystyrene capacitors reliability screened per Level "B" F Plan shown on Page 2, are used in operational amplifiers a networks because of their high insulation resistance, low dielectric absorption and long term stability. These PA capacitors are available at higher working voltages and in special case sizes as required by the customer. Banks of precision capacitors, up to 100 MFD in value, have been supplied for space instrumentation applications.

Level "A" capacitors with burn-in and high reliability screening also be supplied. For advance information on a new high temperature polystyrene capacitor see Pages 21 and 22.

PA SPECIFICATIONS

ERATING TEMPERATURE: —55°C to 85°C at full rated volts.

MPERATURE COEFFICIENT: (See special notes below)
Values 0.001 MFD to 0.0082 MFD —80 ±50 PPM/°C
0.01 MFD to 2.0 MFD —60 ±50 PPM/°C

ABILITY: 0.1% maximum drift with 5 cycles from —62°C to °C.

SULATION RESISTANCE: Measured from terminal to terminal rated voltage, and 5 minutes maximum charge time. For ues greater than 1 MFD, allow an additional minute/MFD arge time.

MINIMUM IR			
Range	25°C	55°C	85°C
0.001 to 0.1 MFD (in megohms)	5,000,000	2,500,000	500,000
Greater than 0.1 MFD (in megohms ÷ MFD)	‡ 1,000,000	‡ 500,000	‡ 100,000

ed not exceed IR values for 0.1 mfd or less

ELECTRIC ABSORPTION: 0.02% maximum at 25°C.

ISSIPATION FACTOR: 0.02% maximum at 25°C. alues to 1 MFD at 1 KHz, above 1 MFD at 0.1 KHz.

ELECTRIC STRENGTH: 200% of rated voltage.

ONSTRUCTION: Polystyrene dielectric, extended foil electrodes, hermetically sealed. Leads isolated from case. Leads are nned copperweld.

EAL TEST: 1 x 10^{-6} ATM-CC/SEC. maximum leak rate.

NVIRONMENTAL: Shall meet all applicable requirements of IL-C-19978, including Grade 3 vibration.

OR ADDITIONAL DETAILS, SEE GENERAL INFORMATION SECTION, PAGE 3.

OTES:

PECIAL PA CAPACITORS can be supplied with a negative coefficient of —20 to —100 PPM/°C that is linear to ±30 PPM/°C, ±20 PPM/°C and ±10 PPM/°C. **A WIDE SELECTION** is available of larger MFD values in bathtub and custom cases. **A PECIAL HIGH TEMPERATURE**, high reliability type polystyrene apacitor is currently available and under test, see Pages 21 nd 22.

LEVEL "B" QUALITY ASSURANCE

"PA" POLYSTYRENE CAPACITORS ARE 100% PROCESSED AND TESTED AS FOLLOWS:

1. Temperature cycling from —62°C to 85°C, 5 cycles minimum.
2. Mass spectrometer hermetic seal test per MIL-STD-202, Method 112, condition C. Procedure IIIA.
3. Dielectric strength test at a minimum of 200% of rated voltage, lead to lead and leads to case.
4. Insulation resistance at rated voltage and 25°C.
5. Capacitance tolerance at 1 KHz and 25°C.
6. Dissipation factor at 1 KHz and 25°C.
7. Visual inspection for dimensions, marking, and packaging.
8. Traceability to production and test records by permanent marking of parts with lot control number.
9. Process and inspection data is maintained on file per NPC-200-3 and MIL-Q-9858 Quality Control Standards.

MA MYLAR AND MM MYLAR CAPACITORS

COMPONENT RESEARCH COMPANY, INC.

MA miniature metallized mylar capacitors are extremely compact and rugged. 1MA capacitors are available in 100V in tolerances of 0.5% to 5% and values from .001 mfd to 10 mfd

MM metallized mylar capacitors are reliable, accurate an rugged. Many thousands are used in military equipment wher an extra measure of dependability is needed. MM capacitor are available in 200V, 400V, and 600V in tolerances of 0.5% t 5% and values from .001 mfd. to 10 mfd.

CONSTRUCTION — Mylar dielectric, hermetically sealed, extended metal film electrodes, leads isolated from case, leads are tinned copperweld.

SEAL TEST — 1 x 10^{-6} ATM-CC/SEC Max leak rate.

ENVIRONMENTAL — Capacitors shall meet all applicable requirements of Mil-C-19978, including grade 3 vibration.

FOR ADDITIONAL DETAILS, SEE GENERAL INFORMATION SECTION, PAGE 3.

LEVEL "B" QUALITY ASSURANCE

"MM" AND "MA" MYLAR CAPACITO ARE 100% PROCESSED AND TESTED AS FOLLOWS:

1. Stabilization by temperature cy from .62°C to 125°C, 5 cycles minin
2. Mass spectrometer hermetic seal per MIL-STD-202, Method 112, condi C. procedure III A.
3. Dielectric strength test at a minin of 200% of rated voltage, lead to and leads to case.
4. Insulation resistance of rated volt and 25°C.
5. Capacitance tolerance at 1KHz 25°C.
6. Dissipation factor at 25°C.
7. Visual inspection for dimensio marking, and packaging.
8. Traceability to production and t records by permanent marking of pa with lot control number.
9. Process and inspection data is ma tained on file per NPC-200-3 and Mi 9858 quality control standards.

ELIABILITY INFORMATION

LURE ANALYSIS • LIFE TESTING • SIMULATION TESTING

COMPONENT RESEARCH COMPANY, INC.

CASE HISTORY RN-042

EN CIRCUIT CONDITION OF 100 VDC RATED CAPACITOR LOW VOLTAGE APPLICATION.

AILS: Customer discovered that existing voltage transients eeding 100 volts, ultimately damaged several capacitors ing system environmental checkout. No room was available a larger size capacitor without costly re-tooling.

RRECTIVE ACTION: A series of screening tests was conducted CRC on both capacitors from the same lot, and a newer CRC e with the same characteristics but capable of withstanding re severe current surges. These tests were designed, in a p-by-step method to induce failure modes, under the cus- ner's worst case conditions. Capacitance, IR and DF measure- nts taken after each step served to monitor all possible radation trends. Following are the screening tests:

EST TEP	TEST CONDITIONS
1	48 hours Burn-In @ 125°C/140 VDC.
2	20 Cycles from —62°C/125°C.
3	62 hours Burn-In @ 85°C/400 Hz/100 VRMS Sine Wave.
4	HiPot Test @ 600 VDC for 1 minute and @ 600 volts peak-to-peak @ 60 Hz square wave for 1 minute.
5	24 hours Burn-In @ 85°C/400 Hz/100 VRMS Sine Wave.
6	5.5 hours @ 85°C/60 Hz/400V peak-to-peak square wave.
7	23 hours Burn-In @ 125°C/300 VDC.
8	3 Cycles from —62°C/125°C.
9	23 hours Burn-In @ 125°C/400 VDC.
10	3 Cycles from —62°C/125°C.
11	37.5 hours Burn-In @ 85°C/60 Hz/300V peak-to-peak.

TEST CONCLUSIONS

Original capacitors used passed Step 3, but with significant ncreases of dissipation factor, then opened after Step 4. CRC eplacement capacitors made with special electrodes (patent pending) survived all tests. Results for 10 samples are shown above.

CRC test capacitors are extremely stable with the major capaci- tance shift occurring after the conditioning of Step 1.

ADDITIONAL INFORMATION—5 Picoamperes leakage current at 90 volts is equivalent to 18,000,000 megohms insulation re- sistance. CRC capacitors are therefore, remarkably high in insulation resistance after all screening tests.

CRC capacitors tested above were a special 1TJ103 Teflon type similar to those listed on Page 4 of our catalog. Larger values were also tested with equivalent results.

For AC applications, it is imperative that the customer conduct reliability screening tests utilizing pulsed voltages to avoid failures. Contact our Reliability Department for assistance in this matter.

RELIABILITY STUDY XT-294

HIGH VOLTAGE CAPACITORS

Customers have requested that CRC supply high reliability capacitors of both light-weight construction and minimum size. These units must withstand the most rigorous environmental conditions and yet perform electrically as precision capacitors. The following typical life test is only one of many conducted constantly to verify the outstanding performance of CRC capacitors, regardless of specialized application.

APPLICATION: A capacitor 0.25 MFD ±5% is required in a .670 x 1.875 hermetically sealed case to operate at 1500 VDC.

TEST PLAN: To determine whether the CRC type and size capacitor could be considered reliable for a long term space flight application, CRC decided to life test 26 samples at 2300 volts DC and 85°C. In order to study any possible failure modes, readings with extremely accurate measurement equipment were taken of capacitance, DF and IR, initially and at periodic intervals. The following data was available on 3-18-70, at the time of catalog preparation. Continued testing is planned to 10,000 hours.

26	—.55	.05%	.07%	2,200,000	2,300,000

TEST CONCLUSIONS

1. In order to establish failure criteria more severe and sophisticated than existing high reliability military specifications, CRC decided to establish the following as failures during or at end of test:
   A) An open or short circuit condition.
   B) Capacitance shift exceeding ±2%.
   C) % Dissipation factor must not exceed 0.2%.
   D) Insulation resistance must not fall below 100,000 megohms.
2. At the end of 1500 hours of test, results were as follows:
   CONDITION:
   A) No failures.
   B) Maximum capacitance shift was +.69%
   C) Maximum dissipation factor was .12%
   D) Minimum insulation resistance was 400,000 megohms.
3. By means of extrapolation based on the test data above, the failure rate is $0.0005\%/10^3$ hours at a 95% LCL confidence level.

ADDITIONAL INFORMATION—The capacitor described above is a specially modified polycarbonate extended metal film electrode capacitor and is capable of operation from —55°C to 125°C. It is also excellent for sinusoidal AC applications. Larger test batches will be tested at various stress levels and temperatures to study the unusual performance of these remarkable capacitors.

SPECIAL PRODUCTS SECTION
TEMPERATURE COEFFICIENT DATA

HIGH TEMPERATURE POLYSTYRENE CAPACITORS

CRC has developed miniature polystyrene capacitors that can safely be operated above 85°C. This has been made possible by the use of a combination of the CRC patented winding and termination construction, and special metal film electrodes (patent applied for), which support the polystyrene dielectric in a stress-free manner at temperatures above 85°C.

As of January 1970, 100 capacitors ranging from 0.001 to 0.1 MFD and rated at 50 volts were burned-in at 105°C and 140% of rated voltage for 72 hours, without failure. Some of the capacitors were also tested for insulation resistance at 45 volts from 25°C to 125°C without any shorts or opens occurring. CRC will conduct life tests at 85°C, 105°C and 125°C to determine the proper ratings for these unusual capacitors.

TC TRACKING OF MATCHED SETS

Recently a customer requested that we supply our 30 volt "PL" Polycarbonate capacitors in five values from .0022 MFD to 1 MFD so that the TC slopes track within ±0.25% of each other from —55°C to 125°C. We tested on a sample basis and found that our standard catalog type met this requirement. In addition, the customer requested the five capacitors to be 1% in tolerance but to be assorted and packaged in groups of five matched to 0.1%. We have been supplying thousands of such sets on a routine basis ever since.

In a more extreme example, a customer requested 0.1 MFD capacitors supplied in pairs so that they track within 0.01% from —10°C to 85°C. We found that our best polystyrene units in stock were limited to 0.02% and that selected "1TJ" Teflon capacitors met the 0.01% maximum requirement.

ZERO TC

We can match opposing coefficients of capacitors, such as polysulfone and teflon, to ±0.25% maximum from —55°C to +125°C. It is possible to match to ±0.1% for more limited temperature ranges. With the state of our art growing so rapidly, we may be able to guarantee closer limits on a production basis soon.

HIGH NEGATIVE TEMPERATURE COEFFICIENT

Our new "MP" extended metal film electrode polypropylene capacitors have a linear TC of —250 to —350 PPM/°C. The capacitors can be operated from —55°C to 125°C. The capacitors can be supplied in approximately the same case sizes as Type "05PA" Polystyrene, shown on Page 18 of the catalog. This new addition to our family of TC curves will provide design engineers with circuit capabilities not previously possible.

% CAPACITANCE VS TEMPERATURE

CR COMMUTATION AND SPECIAL AC CAPACITOR APPLICATIONS

COMPONENT RESEARCH COMPANY, INC.

PAGE 22
Catalog E

Capacitors designed for AC applications by CRC have very low equivalent series resistance and are remarkably cool and efficient for their size. The capacitor shown contains eight 1.2 MFD sections that operate up to 25 KHz at 170 volts AC RMS maximum with 25 amps at 25% duty cycle for each capacitor.

CRC was selected as the manufacturer to produce this special capacitor because of the extreme reliability required for a weapons program.

is epoxy cased capacitor is pro-
ded with heavy copper braided
ads to handle the high peak and
MS currents when operated in
CR commutation circuits. Capaci-
rs of polycarbonate, polypropy-
ne and polysulfone have been
sed in applications from 400 Hz
15 KHz.

high temperature filter
ains two standard teflon
acitors and one feed-
ugh teflon capacitor in a
pact, efficient, case con-
ration.

A space application required high quality, small size, feed-through capacitors to handle 50 amps RMS. CRC designed solid copper terminations which provide lowest possible loss and excellent filter characteristics.

An airborne navigation system needed an extremely compact filter to replace a tantalum capacitor without increase in size. Specially processed polycarbonate capacitors that are 100% tested with square wave power supplies and then burned-in with sine wave voltages, provide the answer to a difficult problem.

Our customer required a capacitor capable of withstanding extreme shock and vibration without impairing high quality performance. Special potting techniques were used to maintain the capacitor characteristics, which was proven after extensive screening and qualification testing.

LECTED CAPACITORS FOR HIGH INSULATION RESISTANCE & LOW DIELECTRIC ABSORPTION

RC receives inquiries for capacitors
at have a higher insulation resis-
nce or a lower dielectric absorption
an listed in the catalog specifications
r our standard types. By means of
00% test and selection, capacitors
unusual performance can be sup-
ied to meet your most exacting re-
uirements.

e readings shown are typical of the
lue ribbon" quality capacitors of
very lot. Up to 30% of the capacitors
a lot generally meet these "blue
ibbon" specifications.

We make guys who can't

CORNING® CYFM Capacitors give you environment-proof performance at substantial savings. They provide economical stability and reliability in coupling, decoupling, filtering, timing, switching, and many other critical circuits. The CYFM's are electrically and environmentally interchangeable with the CYFR type. We have boiled them in salt water, immersed them in saturated steam and subjected them to 96-hour salt spray and 1200 hours of moisture resistance tests without failure or degradation.

CORNING® CYFR Capacitors give you guaranteed reliability. They have contributed, and continue to contribute to marked improvement in MTBF in many military and space programs such as Titan, Surveyor, Syncom, Mariner, Apollo, and Gemini. Over 64-million unit-hours from lot acceptance tests over a five year period for Minuteman have demonstrated the reliability and reproducibility of the CYFR capacitor from a process under control.

CORNING® TYO Capacitors are ideal for printed circuit applications because of their miniaturization and radial lead configuration. Their design permits upright, flush mounting on circuit boards. Standard gold plated Dumet leads give reliable soldering or welding, and are spaced symmetrically with the case on .1″ grids for fast installation on printed circuit boards. The lower prices of CORNING TYO Capacitors now provide a glass capacitor at comparable ceramic prices.

CORNING® CY60 and CY70 Capacitors are excellent for a large variety of radio frequency applications. They are used for power amplifiers, low power transmitters, and many electronic devices in grid, plate coupling, tank, and bypass functions. Because of their small size and minimum weight, these CORNING Capacitors are also suited for airborne equipment and all types of mobile transmitters.

The Glass-K is a miniature stable capacitor that exhibits a high capacitance-to-volume ratio. It offers the size advantages of ceramic types and the consistent performance associated with glass dielectrics.

The Glass-K's physical size and values of capacitance meet the requirements of both military and commercial applications. The larger capacitance values are suitable for point-of-use filtering in computers, and for bypassing and coupling elements in miniaturized circuitry. The smaller capacitance values are suitable for more critical circuit functions.

The Glass-K is designed for general purpose use in bypass, coupling, and filtering applications where the miniature size of ceramics is required and where **better performance** characteristics are desired at **competitive prices.**

NEW YORK: 212/245-3866 CALIFORNIA: 213/277-2050

Condenser Products designed and supplied this 250 KV (at 0.5 mfd) DC filter to NASA.

DC FILTER CAPACITORS
60 KV unit shown
Miniature glass — 1 to 60 KV standard; CP70 type — 600 V to 50 KV standard; rugged bakelite — 40 to 150 KV standard.

PULSE CAPACITORS
Suitable for RF series — 1 to 60 KV standard; temperature ranges up to 210°C without derating.

HIGH VOLTAGE POWER SUPPLIES
Modular compact and capacitor charg Output from 1 to 75 KV standard. Th hermetically-sealed, self-contained po supplies are designed for high-volt low-current DC for many applicati OEM specials promptly quoted.

SPECIAL OEM DESIGN
Special OEM designs to suit customer applications and space limitations. A wide range of voltages, capacities and constructional styles available to meet your specifications.

LABORATORY AND INSTRUMENTATION CAPACITORS
Glass or CP70 containers.

ULTRA LOW INDUCTANCE ENERGY STORAGE CAPACITORS
E-Type capacitors feature fast discha e and are designed for quantum electron s in the scientific and industrial optical co munity for laser, simulation, photoly s and spark discharge technologies. Gu anteed one year.

SCR COMMUTATING & SNUBBING CAPACITORS
Both standard replacements and for your circuit specifications and applications.

WE DESIGN AND MANUFACTURE CAPACITORS TO SPECIFICATIONS FOR MANY APPLICATIONS, SUCH AS:

- High voltage filter capacitors for compact X-Ray equipment
- Ultra high resistance capacitors for radiation counters
- High voltage – High Q carrier current coupling capacitors
- RF power capacitors for transmitters, dielectric and induction heaters
- Energy storage capacitors for sonar, welding and photolysis
- Low capacitance drift capacitors for filters
- Laboratory grade capacitors for computers, integrators and bridge standards
- Pulse forming networks for radar

Electro Cube Capacitors

Special service on non-standard ratings, sizes or packages

Capacitors, in nearly any value, type, case configuration or size can be furnished by Electro Cube, on special order with short delivery. We'll design them to a particular requirement or make them to your specifications. We'll supply metal cases including bath tubs, tubular and rectangular hermetically sealed units, as well as epoxy, and wrap and fill types. More than 4,000 standard units are also available. Representative dielectrics and specifications are presented in the table to the right.

For substantial package size reductions, Electro Cube can supply a full line of 50VDC capacitors using .00008 gauge metallized polycarbonate. Specially designed manufacturing equipment and rigid controls give these units reliability equivalent to heavier gauge 100 volt metallized polycarbonate capacitors. Capacitance ratings from .001 mfd to 50 mfd are available in a variety of case styles.

We also design and produce RC networks and RFI filters for a wide range of applications. Electro Cube filters have been used in such projects as Apollo, Minuteman and the C-5A.

PLASTIC DIELECTRIC CAPACITORS

ANALOG #200 POLYSTYRENE

TYPE 222 & 222S — Stable-K Wrap-and-Fill Round Construction, Axial or Radial Lead
TYPE 224 — Flat-Subminiature Wrap-and-Fill Oval Construction, Axial or Radial Leads.
TYPE 220 & 220S — Round Hermetically Sealed, Axial Lead.

Specifications:
- Temp. −55°C to 85°C, Full Rated Voltage
- I.R. 500,000 Megohm-Microfarads @ 25°C (Typical)
- D.F. Less than .05%
- Temp. Coef. −110±30 PPM/°C

ENVIRONMENTAL #500 POLYESTER

TYPE 508 & 508S
Microminiature Wrap-and-Fill Round Construction, Axial or Radial Leads.
Specifications: Temp. −55°C to +125°C, Full Rated Voltage • I.R. 50,000 Megohm-Microfarads @ 25°C • D.F. Less than .7% • Temp. Coef. +200 PPM/°C

TYPE 555
Epoxy Encased Wrap-and-Fill Round Construction, Axial Leads.
Specifications: Temp. −55°C to +125°C, Full Rated Voltage • I.R. 10,000 Megohm-Microfarads @ 25°C • D.F. Less than 1%

TYPE 563
Subminiature Wrap-and-Fill Round Construction, Axial or Radial Leads.
Specifications: Temp. −55°C to +125°C, Full Rated Voltage • I.R. 70,000 Megohm-Microfarads @ 25°C • D.F. Less than .7%

TYPE 564 & 564R
Flat Subminiature Wrap-and-Fill Oval Construction, Axial or Radial Leads.
Specifications: Same as Type 563

TYPE 543 or CTM to MIL-C-55514
Wrap-and-Fill Round Construction, Axial Leads.
Specifications: Will Meet or Exceed Requirements of MIL-C-55514 Specifications.

TYPE 502
Epoxy Case Rectangular Construction Radial Leads.
Specifications: Temp. −55°C to 12C • I.R. 100,000 Megohm-Microfarads @ 25°C • D.F. Less than 1%

TYPE 517
R-Graded Hermetically Sealed Round Construction, Axial Leads. Both Leads Insulated or One Lead Grounded To Case.
Specifications: Temp. −55°C to 125°C, Full Rated Voltage • I.R. 50,000 Megohm-Microfarads @ 25°C • D.F. Less than

TYPE 592 & 593 or CQ to MIL-C-19978
Hermetically Sealed Round Construction, Axial Leads. Both Leads Insulated or One Lead Grounded To Case.
Specifications: Will Meet or Exceed Requirements of MIL-C-19976 Specifications.

METALLIZED #500 POLYESTER

TYPE X563
Subminiature Wrap-and-Fill Round Construction, Axial or Radial Leads.
Specifications: Temp. −55°C to 125°C, Full Rated Voltage • I.R. 30,000 Megohm-Microfarads @ 25°C (Typical) • D.F. Less than .7%

TYPE X564 & X564R
Flat Subminiature Wrap-and-Fill Oval Construction, Axial or Radial Leads.
Specifications: Temp. −55°C to 125°C, Full Rated Voltage • I.R. 30,000 Megohm-Microfarads @ 25°C • D.F. Less than 1%

TYPE X502
Epoxy Case Rectangular Construction Radial Leads.
Specifications: Temp. −55°C to 125 • I.R. 50,000 Megohm-Microfarads @ 25 • D.F. Less than 1%

TYPE X517
R-Graded Hermetically Sealed Round Construction, Axial Leads. Both Leads Insulated or One Lead Grounded To Case
Specifications: Temp. −55°C to 125°C Full Rated Voltage • I.R. 25,000 Megohm-Microfarads @ 25°C • D.F. Less than 1

EXCEL #700 POLYCARBONATE

TYPE 777
Subminiature Wrap-and-Fill Round Construction, Axial or Radial Leads.
Specifications: Temp. −55°C to 125°C • I.R. 75,000 Megohm-Microfarads @ 25°C • D.F. Less than .2% • Temp. Coef. +80 PPM/°C

TYPE 778
Flat Subminiature Wrap-and-Fill Oval Construction, Axial or Radial Leads.
Specifications: Same as Type 777

TYPE 773
Epoxy Encased Rectangular Construction Radial Leads.
Specifications: Same as Type 777

TYPE 783
R-Graded Hermetically Sealed Round Construction, Axial Leads. Both Leads Insulated or One Lead Grounded To Case
Specifications: Same as Type 777

METALLIZED #700 POLYCARBONATE

TYPE X777
Subminiature Wrap-and-Fill Round Construction, Axial or Radial Leads.
Specifications: Temp. −55°C to 125°C • I.R. 100,000 Megohm-Microfarads @ 25°C • D.F. Less than .3% • Temp. Coef. +80 PPM/°C

TYPE X778
Flat-Subminiature Wrap-and-Fill Oval Construction, Axial or Radial Leads
Specifications: Same as Type X777

TYPE X773
Epoxy Encased Rectangular Construction Radial Leads.
Specifications: Same as Type X777

TYPE X783
R-Graded Hermetically Sealed Round Construction, Axial Leads. Both Leads Insulated or One Lead Grounded To Case
Specifications: Same as Type X777

FILM CAPACITORS

F-DYNE quality film capacitors are designed and manufactured to provide optimum electrical characteristics with reliable performance.

The smallest housing that has been developed to date, providing superior performance, is the thermo Mylar® tape wrap. It adds approximately .010″ to the diameter of the winding and is capable of meeting all MIL-C-27287 requirements including moisture resistance, vibration, insulation resistance, etc.

F-DYNE capacitors are made with copperweld leads electrically welded to aluminum foil. No high series resistance or high power factor problems are ever encountered with this construction. Even if the leads are cut very short and then soldered into your application with an extra hot soldering iron, the lead connection to the foil will not be affected. In fact, the end of th le can be burned off with a gas torch flame without Fe ing the power factor or series resistance. Met iz Mylar, Metallized Polycarbonate and tin lead foil Po styrene capacitors are the only F-Dyne Capacitor th are made in the conventional manner with leads sc er to the foil. Normal care should be taken when sol ri these capacitors into your circuits.

THREE BASIC FILMS ARE USED IN F-DYNE CAPACITORS:

- MYLAR
- POLYCARBONATE
- POLYSTYRENE

ELECTRICAL & MECHANICAL CHARACTERISTICS

All F-Dyne capacitors pass the following requirements.

A. **Dielectric Strength**
F-Dyne quality capacitors will pass a life test at 140% of their DC rated voltage. In addition, they are designed to withstand a voltage of 200% of their rated DC voltage for one minute without any interruption or damage.

B. **Capacitance Tolerance**
When measured at a frequency of 1000 cps at 25°C, capacity will be within the specified tolerance. See charts for variation with temperature and frequency. The standard tolerances are ±½%, 1%, 2%, 5%, 10%. Other tolerances, closer and wider, are available.

C. **Lead Strength**
F-Dyne capacitor leads withstand a five pound pull for a full minute.

D. **Lead Flexibility**
Leads are designed to have full flexibility to insure maximum use without danger of damage or fatigue failure.

E. **% Dissipation factor @ 1000 cps and 25°C**

	FOIL		METALLIZED	
Type	Typical	Spec. limit	Typical	Spec. limit
Mylar	.45	1%	.55	1%
Polycarbonate	.05	.3	.15	.3
Polystyrene	.03	.1	—	—

Note: Capacitors over 5mfd. are tested at 60 cycles.

F. **Insulation Resistance (Megohms x Microfarads)**

		FOIL	NEED NOT EXCEED		METALLIZED	NEED NOT EXCEED
Type	Typical	Spec. limit	Megohms	Typical	Spec. limit	Megohms
Mylar	100,000	50,000	100,000	50,000	25,000	50,000
Polycarbonate	400,000	75,000	500,000	80,000	30,000	150,000
Polystyrene	800,000	100,000	500,000	—	—	—

The above values are read after a two-minute charge at rated voltage at 25°C.

G. **Humidity Resistance**
All foil capacitors meet requirements of MIL-C-27287. Metallized capacitors will exceed requirements of E.I.A. specifications RS-164.

H. **Voltage temperature derating**
All Mylar and Polycarbonate capacitors are rated at 85°C for continuous operation. If ambient temperatures higher than 85°C are encountered, in order to realize the normal life expectancy of the capacitor, the voltage must be derated as follows:

85°C	95°C	105°C	115°C	125°C
80	68	58	48	40
100	88	75	62	50
200	170	140	120	100
400	335	285	240	200

GENERAL APPLICATION INFORMATION

SIZE AND PRICES of the three dielectrics vary in the following order.

1. Mylar least expensive and smallest.
2. Polycarbonate approximately 12% larger than mylar and more expensive.
3. Polystyrene approximately three times as large as Mylar and most expensive of the three dielectrics.

COST AND SIZE

For each of the three dielectrics there are size and price variati s.
Standard — least expensive Small — more expensive
Miniature — most expensive

In applications where none of the above types can be used beca e space is limited, F-Dyne supplies metallized foil capacitors for t the Mylar and Polycarbonate dielectrics. These again vary as follo :
Standard — least expensive Small — more expensive
Miniature — most expensive

RA MINIATURE FLAT

MINIATURE FLAT MYLAR AND FLAT POLYCARBONATE ALUMINUM FOIL

o or smaller in size than conventional miniature ed mylar and metallized polycarbonate capacitors, apacitors are superior to metallized capacitors they have a solid aluminum foil conductor ap- tely .00025 in thickness. Each foil extends beyond the dielectric and the leads are electrically welded to the aluminum foil extensions. Because of this construction these capacitors have the following advantages over comparable sized metallized mylar and metallized polycarbonate capacitors.

	Mylar Foil	Metallized Mylar
ion factor	less than .5% @ 25°C measured at 1000CPS.	less than 1% @ 25°C measured at 1000CPS.
on* ce	50,000 megohm micro farads at 25°C rated voltage after 2 min. charging time I.R. need not exceed 100,000 megohms.	25,000 megohm microfarads at 25°C at rated voltage after 2 min. charging time. I.R. need not exceed 50,000 megohms.
y Resistance	meets or exceeds requirements of MIL-C-27287	Exceeds requirements of E.I.A. Spec. 164 para. 2, 3, 8.
of Connections	Welded connection of lead to aluminum foil cannot be disturbed when the capacitor leads are soldered into the circuit regardless of how much they are overheated.	All metallized capacitors are terminated with a metallic spray on the ends and a lead attached with solder. If the lead is overheated when being soldered into the application, the internal connection may be unsoldered causing high series resistance and subsequent failure.

Other characteristics same as standard mylar capacitors.

ER ADVANTAGES

tion to the above advantages the foil type capacitors give more dependable stable equipment functioning. On are occasions, metallized capacitors have been known to short and clear in application. As a result the equipment ctions and the cause of malfunctioning cannot be traced. This cannot happen with foil type capacitors listed on 22 and 23.

E

ice of the foil type is lower than the price of metallized capacitors because of the less expensive straight d simpler construction.

haracteristics are the same for polycarbonate flat capacitors, except for insulation resistance see page 1.

Application	Catalog Type	Description	Voltage Range	UF Range	Temperature Range	Bulletin Reference	
For polar and nonpolar coupling, filtering, decoupling, bypass, energy storage and timing in military and high-performance industrial amplifiers, transmitters, receivers, servo systems, and navigation systems. Hermetic seal available.	29F	Standard and high-voltage tantalum foil; MIL-C-3965: CL20, CL21, CL22, CL23, CL24, CL25, CL26, CL27, CL30, CL31, CL32, CL33, CL34, CL35, CL36, CL37 CL51, CL52, CL53, CL54 Tubular and rectangular	Up to 450 VDC	0.15 to 3500 μf	−55C to 85C or 125C	GET-2997	
High-reliability type for military or aerospace use where hermetic seal and extreme reliability are prime factors.	16K	Hermetic seal available	Up to 150 VDC	0.75 to 580 μf	−55C to 125C	Consult GE Sales Engineer	
For polar only — where no reverse voltage is expected — coupling, decoupling, filtering, bypass, energy storage and timing in military and high-performance industrial amplifiers, transmitters, receivers, servo systems, and navigation systems.	69F	Tantalum porous anode; MIL-C-3965: CL64, CL65, CL55 Tubular and rectangular	Up to 150 VDC	1.7 to 2400 μf	−55C to 85C or 125C	GET-2997	
	69F900	Subminiature tantalum porous anode	Up to 60 VDC	3.3 to 450 μf	−55C to 85C	GEC-1798	
For polar only—where no reverse voltage is expected—coupling, filtering, decoupling, bypass, energy storage and timing in standard and high-performance industrial and entertainment amplifiers, transmitters, receivers, servo systems, and navigation systems, within temperature capabilities.	62F	Porous anode tantalum electrolytic Subminiature Lightest weight Highest volumetric efficiency	Up to 60 VDC	0.01 to 325 μf	−55C to 85C	GEC-1798	
For bulk filtering and energy storage in military and high-performance or standard industrial power supplies, including computer usage and welding equipment.	86F	High performance, high volumetric efficiency	Up to 450 VDC	75 to 540,000 μf	−40C to 65C, 85C	GEC-1798	
	88F	Long life, high ripple current	Up to 150 VDC	170 to 150,000 μf	−40C to 85C	Consult GE Sales Engineer	
For polar coupling, filtering, decoupling, bypass, energy storage and timing in standard and high-performance industrial and entertainment amplifiers, transmitters, receivers, servo systems, and navigation systems, within temperature capabilities.	76F 77F	Miniature aluminum electrolytic	Up to 150 VDC	1 to 790 μf	−20C/ −40C to 85C	GEC-1798	
For filtering, bypass, decoupling, and coupling in entertainment-type radio, TV, high-fidelity systems, and in industrial instruments and test equipment.	43F 87F	Can style and Tubular Aluminum electrolytics for radio, TV, and other communications equipment	Up to 450 VDC	5 to 15,000 μf	−20C to 85C	GEC-1798	
For circuits in test, measurement, control, and communications equipment of all types, where high-quality film-foil units are an economic choice.	75F	Polyester film-foil roll is epoxy-encapsulated. Welded radial leads. Units have mounting feet and precise dimensions, for high-density packaging.	50 to 600V	.0010 to 1 μf	−55C to 125C	GEC-1798

GENERAL ELECTRIC

GENERAL INSTRUMENT

DIPPED SILVER-MICA CAPACITORS MIL-C-5D AND COMMERCIAL GRADES

General Instrument dipped silver-mica capacitors meet or exceed MIL-C-5D and EIA-RS153 requirements. MIL types and RDM types have multiple epoxy-resin coatings for maximum environmental protection. The single dip SRDM type may be used where size is critical and subsequent encapsulation of the circuit will be applied.

The range of standard types and ratings is shown in the table below. Complete technical details appear in Bulletin MC-2.

Production quantities are available from General Instrument Corporation, Capacitor Group, Walnut St., Tazewell, Va. 24651 (Phone 703-988-5551). Contact Miconic Industries, Inc., 35 Eileen Way, Syosett, N.Y. 11791, for the name of the G.I.-Miconics distributor nearest you.

GENERAL INSTRUMENT

ALUMINUM ELECTROLYTIC CAPACITORS

b-miniature tubular +85°C

Type 974 and 975 capacitors are in-strial quality units rated for continu-s operation from −30°C to +85°C. ey feature exceptionally low DCL and R. All-welded construction is com-ed with high purity foils in an insu-ed metal case. The 974 has axial ds. The 975 is single-ended for nted circuit applications. Capaci-ce range, 1-1800 μF, working volt-e, 3-150 VDC. See bulletins EL-101 4) and EL-105 (975).

Type 974 and 975 capacitors are ailable from Authorized Miconics tributors.

Sub-miniature tubular +65°C

Type 984 and 985 capacitors are intended for entertainment applications. They are rated for continuous duty from −20° C to +65°C (500 hours at +85°C). Both types have high volumetric efficiency and feature all-welded construction in insulated metal cases. The 984 has axial leads while the 985 is single-ended for printed circuit applications. DCL and ESR are very low and all types have extended surge voltage ability. Capacitance range, 1-2500 μF, voltage, 3-150 WVDC. See Bulletin EL-102.

andard tubular +85°C

Type 977 capacitors are intended for dustrial and entertainment applica-ns and are rated for continuous op-ation from −20°C to +85°C. A wide nge of values are available from 1 to ,000 μF and 3-450 WVDC in 72 case zes. Construction is all-welded with sulated (PVC) metal cases standard. ardboard sleeves and/or mounting raps are available. For printed circuit plications, Type 979 is available with special mounting wafer. See Bulletin -111.

Type 977 capacitors are available om Authorized Miconics Distributors.

Metal case, Twist-mount +85°C

A broad range of metal case electrolytics in twist-mount, printed circuit or special mounting is available in the Type 927 series. Capacitances range from 1 to 30,000 μF and voltages from 3 to 475 WVDC. Operating temperature is −30°C to +85°C. These capacitors conform to EIA Standard RS-154B. Units are supplied in single, dual, triple or quad configuration. For details, see Bulletin EL-109.

gh-capacitance omputer Grade) +85°C

Type 982 capacitors feature very eat (up to 300,000 μF) capacitances compact insulated metal cans. Stand-d configuration is screw terminals th PVC sleeves. Mylar and acetate eeves are also available. The standard e of eight cases covers most popular plications. Other cases are available. pacitance ranges from 95μF-2,200 μF 450 WVDC, to 300,000 μF at 3 WVDC. e 982 is intended for continuous op-ation in power supply filters at tem-ratures up to +85°C. See Bulletin -107.

Type 982 capacitors are available om Authorized Miconics Distributors.

Military Grade (MIL-C-62)

General Instrument supplies capacitors to MIL-C-62 in standard metal can and "bathtub" configurations. Extreme manufacturing care is exercised to ensure adherence to specifications. For details, see Bulletin EL-108. Rated for operation from −40°C to +85°C. MIL-C-62 capacitors are available from Authorized Miconics Distributors.

"CRYSTAL-CAP"™ MYLAR* CAPACITORS (Patent applied for)

The Type 165 "Crystal-Cap" capacitor is a revolutionary new form of Mylar capacitor. The Mylar dielectric is fused into an integral unit with high purity aluminum foil to achieve unparalleled performance. Insulation resistance is extremely high with DF very low. Capacitance retrace characteristics are excellent. Terminal wires are imbedded into the sealed ends of the capacitors in a unique manner (Patent applied for) to provide a very strong bond.

The "Crystal-Cap" outperforms all typical Mylar "Wrap-and-fill" types in electrical or physical comparisons. Capacitance range, .001-.47μF, 50 to 600 WVDC. Operating temperature: −55°C to +125°C. See Bulletin FC-101.

Type 165 "Crystal-Cap" capacitors are available from Authorized Miconics Distributors.

*Mylar is an E.I. DuPont de Nemours trademark for polyester film.

CERAMIC CAPACITORS

Subminiature ML02 and ML03 Series

WORKING VOLTAGE: 25 VDC
TEMPERATURE RANGE: -55°C to +85°C
INSULATION RESISTANCE: 2500 megohms-microfarads or 5000 megohms, whichever is less
DISSIPATION FACTOR: 4% at 1 KC and +25°C (measured at 0.5 VRMS)
TEMPERATURE CHARACTERISTICS: Maximum capacitance change -55°C to +85°C, +22%, -56% with zero applied voltage
LIFE TEST: 2 x WVDC at +85°C for 1000 hours
LEAD SIZE
Radial Leads: #24 AWG tinned copper
Axial Leads: #22 AWG tinned copper
ENCAPSULATION: Wax impregnated phenolic
MILITARY SPECIFICATIONS: Meet or exceed requirements of MIL-C-11015 (latest revision), where applicable

e drawing

leads consist of solid, bare, tinned wire. Special nickel leads are for applications requiring a high degree of weldability.

4 gauge: .175 and .195 Dia.; 22 gauge: .235 and .312 Dia.; 20 gauge: and larger case sizes.
ing add .020 max. to Dia. and 1/16 to nominal case length.

ications

NCE AND TOLERANCE
citance limits at +25°C are determined by the specified tolerance. s are measured at or referred to a frequency of 1000 cps.

ION FACTOR
.15% at 1000 cps. at +25°C.

ON RESISTANCE
ging potential is equal to the specified operating voltage for a given ure. The minimum electrification time is two minutes. Listed below mum values:

ature	Nominal Capacitance Mfd.	R X C Megohms X mfd.	R Megohms
5°C	Greater than .5	50,000	
	Smaller than .5		100,000
5°C	Greater than .5	5,000	
	Smaller than .5		10,000
5°C	Greater than .5	500	
	Smaller than .5		1,000

LTAGE
thstand a DC voltage equal to 200% of the rated voltage for one t a temperature of +25°C, ±5°C.

ATED LIFE TEST
thstand an accelerated life test of 250 hours with 140% of applied tage at applicable high test temperature. Only one failure in 12 s tested shall be allowed. A failure is defined as the following:
he capacitor has a short or open circuit.
the capacitance has changed more than 5% from its original value.
he insulation resistance is less than 50% of the specified value above.
the DF is greater than 20% of its initial specified value.

TURE AND IMMERSION CYCLING
et all requirements of the applicable paragraph of the latest issue -19978.

E RESISTANCE
to meet all requirements of the applicable paragraph of the latest MIL-C-19978.

ON
to withstand the Grade 3 vibration tests of the applicable paragraph test issue of MIL-C19978.

TAGE RATING:
°C to +85°C Ambient)

D-C Voltage Rating	400 cps
100	65
200	120
300	200
400	240
600	250

LL TEST
thstand a steady pull force of 5 lbs. applied axially to a capacitor one minute.

NDING TEST
ds shall withstand without breakage the following stresses performed point of egress: bend 90 degrees in one direction, then back to the position and 90 degrees in the opposite direction.

ANCE CHANGE WITH TEMPERATURE
nge of capacitance with reference to the actual value at +25°C does ed the following limits.

TEMPERATURE	CHANGE OF CAPACITANCE
−55°C to +125°C	2%

100 V.D.C.

Part No.	Capacitance Mfd.	Diameter Inches	Length Inches

HERMETICALLY SEALED (GLASS-TO-METAL)
MINIATURE METAL CASE
—55°C TO +125°C WITHOUT DERATING
100 VDC THRU 600 VDC

outline drawing

Standard leads consist of solid, bare, tinned wire. Nickel or gold plated leads per MIL-STD 1276 are also available.

Leads: 22 gauge: .235 and .312 Dia.; 20 gauge: .400 and larger
For sleeving add .032 to dia. and 1/16 to the nominal case length.

specifications

CAPACITANCE AND TOLERANCE
The capacitance limits at +25°C are determined by the specified tolerance. Capacitors are measured or referred to a frequency of 1000 CPS.

DISSIPATION FACTOR
Less than .3% from +25°C to +125°C at 1000 CPS.

INSULATION RESISTANCE
The charging potential is equal to the specified operating voltage for a given temperature. The electrification time is two minutes. Minimum values are:

Temperature	Nominal Capacitance MFD	R X C Megohms X MFD	R Megohms
+25°C	Greater than .5	25,000	
	Smaller than .5		50,000
+125°C	Greater than .5	200	
	Smaller than .5		500

TEST VOLTAGE
Shall withstand a DC voltage equal to 200% of the rated voltage for one minute at a temperature of +25°C.

ACCELERATED LIFE TEST
Shall withstand an accelerated life test of 1000 hours with 140% of applied rated voltage at +125°C with one failure allowed in 18 capacitors tested. A failure is defined as:
A. If the capacitor has a short or open circuit
B. If the capacitance has changed more than 1.5% from its original measured value
C. If the insulation resistance is less than 50% of the specified value at +25°C
D. If the DF is greater than .5% at +25°C

TEMPERATURE AND IMMERSION CYCLING
Meets the requirements of the applicable paragraph of MIL-C-19978.

MOISTURE RESISTANCE
Meets the requirements of the applicable paragraph of MIL-C-19978.

VIBRATION
Shall withstand Grade 3 vibration tests of the applicable paragraph of MIL-C-19978.

AC VOLTAGE RATING (—55°C to +105°C Ambient)

DV VOLTAGE RATING	AC VOLTAGE RATING @400 CPS
100	70
200	140
400	240
600	330

LEAD PULL TEST
Shall withstand a steady pull force of 5 lbs. applied axially for one minute.

LEAD BENDING TEST
The leads shall withstand without breakage the following stresses performed near the point of egress: bend 90 degrees in one direction, then back to the original position and 90 degrees in the opposite direction.

CAPACITANCE CHANGE WITH TEMPERATURE
Values below are guaranteed performance. Typical values are lower than those stated.

Rated Voltage	Temperature	Maximum Capacitance Change*
100VDC - 200VDC	+25°C to +125°C	+ .5 % — .75%
100VDC - 200VDC	+25°C to —55°C	— .25% —1.5 %
400VDC - 600VDC	+25°C to +125°C	+1.5 % — .75%
400VDC - 600VDC	+25°C to — 55°C	—1.0 % —1.5 %

*For capacitance values greater than .01 mfd. Values of .01 mfd. and less exhibit same change as 400-600 VDC units.

ications

ION RESISTANCE

imum insulation resistance when measured with an applied of 100 volts and an electrification time of two minutes shall llows:

—75,000 megohm-mfds. minimum, but need not exceed 200,- megohms

—4000 megohm-mfds. minimum, but need not exceed 8000 gohms.

C—250 megohm-mfds. minimum, but need not exceed 500 gohms.

C—50 megohm-mfds. minimum, but need not exceed 100 gohms.

The above IR characteristics are very conservative and it can rally expected that they will be much higher than specified. eman engineering dept. believes that in introducing a new line citors a conservative view point be maintained, thereby prof- component which will offer the greatest degree of reliability.

FACTOR

er factor of these capacitors shall be no greater than .5 per- en measured at 1000 cps at 25°C.

ATED LIFE TEST

apacitors shall withstand an accelerated life test of 250 hours C with an applied voltage of 140 percent of rated voltage on t exceeding .05 watt seconds.

ure in 12 samples permitted.

LTAGE

apacitors shall withstand a DC voltage equal to 200 percent ated voltage for one minute at a temperature of 25°C.

RE RESISTANCE AND VIBRATION

apacitors shall meet the requirements for Moisture Resistance ation of Specification MIL-C-25A.

ANCE CHANGE

acitance change shall not be greater than —2 percent to +6 from —65°C to +165°C when compared to the nominal value d at +25°C.

specifications

DISSIPATION FACTOR

Less than 1.0% when measured at or referred to a frequency of 1000 CPS at +25°C, per MIL-C-25C.

INSULATION RESISTANCE

The minimum insulation resistance when measured with an applied potential of 50 to 500 volts, but not to exceed the rated voltage, shall be as follows:

At + 25°C 50,000 megohm-mfds minimum but need not exceed 150,000 megohms.
At + 85°C 1000 megohm-mfds minimum but need not exceed 6000 ohms.
At + 125°C 50 megohm-mfds minimum but need not exceed 300 megohms.

TEST VOLTAGE

Shall withstand a DC voltage equal to 200% of the rated voltage for one minute at a temperature of +25°C, ±5°C.

ACCELERATED LIFE TEST

Shall withstand an accelerated life test of 250 hours with 140% of the voltage rating, applied at the applicable high ambient temperature, per MIL-C-25C.

The 355, and 338 series capacitors are furnished with high strength leads coated with a solderable alloy in the sizes shown below:

355 SERIES	GAUGE	338 SERIES
Up to .156 Dia.	#24 AWG	"T" Dim. up to .156
.156 Dia. to .375 Dia.	#22 AWG	"T" Dim. .156 to .375
.375 to .750 Dia.	#20 AWG	"T" Dim. .375 to .750
Greater than .750 Dia.	#18 AWG	"T" Dim. Over .750

MOISTURE RESISTANCE

Shall withstand the moisture resistance requirements as specified in military specification MIL-C-25C.

VIBRATION-ACCELERATION

Shall withstand the Grade 3 vibration-acceleration requirements of MIL-C-25C.

VOLTAGE RATINGS

Designed to operate over the temperature range of —55°C to +85°C at full rated DC voltage and up to +125°C with working voltages as follows:

+85°C	+125°C
600 VDC	300 VDC
400 VDC	200 VDC
200 VDC	150 VDC
150 VDC	100 VDC
50 VDC	50 VDC

LEAD PULL TEST

Shall withstand a five (5) pound pull applied axially for one minute per MIL-C-25C.

LEAD BEND TEST

Shall be bent without breakage about the point of egress from the capacitor. First 90 degrees in one direction then back to the original position, and then 90 degrees in the opposite direction, per MIL-C-25C.

CAPACITANCE CHANGE WITH TEMPERATURE

The capacitance change shall not exceed the following values with reference to the +25°C capacitance value:

TEMPERATURE	% CAP. CHANGE
— 55°C	—10% Maximum
+ 85°C	+ 5% Maximum
+125°C	+16% Maximum

.204 Diameter and larger: 20 AWG

specifications

DISSIPATION FACTOR
The dissipation factor shall not exceed 1.0% when measured at or referred to a frequency of 1,000 CPS at +25°C.

INSULATION RESISTANCE
The minimum insulation resistance when measured with an applied potential of 80 to 500 volts, but not to exceed the rated voltage, shall be as follows:

At + 25°C 50,000 megohm-mfds minimum but need not exceed 150,000 megohms.
At + 85°C 5,000 megohms-mfds minimum but need not exceed 15,000 ohms.
At + 125°C 50 megohms-mfds minimum but need not exceed 300 megohms.

TEST VOLTAGE
Shall withstand a DC voltage equal to 200% of the rated voltage for one minute at a temperature of +25%, ±5°C.

ACCELERATED LIFE TEST
Shall withstand an accelerated life test of 250 hours with 140% of the voltage rating, applied at the applicable high ambient temperature, per MIL-C-25C. Not more than one failure in 18 pieces tested shall be allowed.

VOLTAGE RATINGS
These capacitors are designed to operate over the temperature range of —55°C to +85°C at full rated DC voltage and up to +125°C with working voltages as follows:

+85°C	+125°C
600 VDC	300 VDC
400 VDC	200 VDC
200 VDC	150 VDC
80 VDC	50 VDC

MOISTURE ASSISTANCE
Capacitors shall withstand 500 hours of 95% relative humidity at 40°C. Voltage will not be applied. Upon completion of test, units will be dried for four hours. Minimum insulation resistance at 25°C. will be 25,000 megohm-mfds but need not exceed 75,000 megohms. Not more than one failure in 12 shall be permitted.

MARKING
Small size of units limits marking information to the following: capacity, voltage, series prefix (356), Gudeman or trademark.

LEAD PULL TEST
Shall withstand a five (5) pound pull applied axially for one minute.

LEAD BENDING TEST
Leads shall be bent without breakage about the point of egress from the capacitor. First 90 degrees in one direction then back to the original position, and then 90 degrees in the opposite direction.

CAPACITANCE CHANGE WITH TEMPERATURE
The capacitance change shall not exceed the following values with reference to the +25°C capacitance value:

TEMPERATURE	% CAP. CHANGE
— 55°C	—10% Maximum
+ 85°C	+ 5% Maximum
+125°C	+16% Maximum

80 VDC

.175 and .195	24
.235 and .312	22
.400 and up	20

leads consist of solid, bare, tinned wire. Special nickel leads are avail- applications requiring a higher degree of weldability.

fications

ANCE AND TOLERANCE
acitance limits at ±25°C are determined by the specified tolerance. rs which have a nominal value of 1 MFD or less are measured or referred quency of 1000 cps. Nominal capacitances above 1 MFD are measured at red to a frequency of 60 cps.

TION FACTOR
n 0.6% at +25°C.

ION RESISTANCE
rging potential is equal to the specified operating voltage for a given ture. The minimum electrification time is two minutes. Listed below imum values:

perature	Nominal Capacitance Mfd	R X C Megohms X Mfd	R Megohms
25°C	Greater than .5 Smaller than .5	50,000	100,000
85°C	Greater than .1 Smaller than .1	5,000	50,000
125°C	Greater than .02 Smaller than .02	100	5,000
150°C	Greater than .01 Smaller than .01	10	1,000

TES OLTAGE
Des ed to withstand a test potential equal to 200% of the rated voltage for two utes at 25°C.
The t voltage must be applied and discharged through a current limiting re- sist e of approximately 1000 ohms.

VOL E RATING ABOVE 85°C
Der above +85°C at a rate of 1.2% of rated voltage per degree C.

ACC RATED LIFE TEST
Cap ors are designed to withstand a test potential equal to 140% of the rate oltage at the test temperature used for a period of 250 hours. One failure in 2 amples tested is permitted. The life test voltage must be applied and dis- cha d through a current limiting resistance of approximately 1,000 ohms.

TEM RATURE AND IMMERSION CYCLING
Des ed to meet all requirements of the applicable paragraph of the latest iss f MIL-C-25.

MO RE RESISTANCE
Des ed to meet all requirements of the applicable paragraph of the latest issue of C-25.

VIB ION
Des ed to withstand the Grade 3 vibration tests of the applicable paragraph of latest issue of MIL-C-25.

AC LTAGE RATING
Des ed to operate safely up to the following AV voltages at 85°C.

NOMINAL VOLTAGE VDC	AC — VOLTAGES AT 85°C (rms)	
	Up to 120 cps	Up to 400 cps
100	70	56
200	140	70
400	280	110
600	420	160

For 85°C operation the listed AC voltages should be derated to 60% of the 85° alues.
If AC and DC voltages are present the sum of the DC voltage and the ampli- tude of the AC voltage must not exceed the specified DC-rating at a given tem- pe re.

LEA PULL TEST
Des ed to withstand a steady pull force of 5 lbs. applied axially to a capacitor ea r one minute.

LEA BENDING TEST
The ads withstand without breakage the following stresses performed near the po of egress: bend 90 degrees in one direction, then back to the original po n and 90 degrees in the opposite direction.

LEAD SPECIFICATIONS: Solid tinned leads 1⅝" long +1" —0 tolerance. No. 22 AWG for .235" and .312" Dia. cans. No. 20 AWG for larger case diameters. For Series F371 (Both Terminals Insulated From Case) add 1/16" to above case length for diameters larger than .400". For diameters .400 and smaller add 3/32" to above case length.

specifications

DISSIPATION FACTOR
Maximum dissipation factor shall be 0.1% at +25°C when measured at a frequency of 1000 CPS. Maximum dissipation factor shall be 0.2% at +200°C.

INSULATION RESISTANCE
The minimum insulation resistance when measured with an applied potential of between 200 and 500 volts and an electrification time of 2 minutes, but never greater than rated voltage shall be as follows:

At + 25°C 125,000 megohm-mfds capacitance values .5 MFD and greater.
250,000 megohms for cap. values below .5 MFDS.
+ 85°C 40,000 meg-mfds for cap. values 1. MFD and greater.
40,000 megohms for cap. values below 1. MFD.
+ 125°C 5,000 meg x mfds for cap. values .25 MFD and greater.

TEST VOLTAGE
Shall withstand a DC voltage equal to 200% of the rated voltage for 2 minutes. Test voltage will be applied and discharged through a current limiting resistor of one Ohm per volt.

LIFE TEST VOLTAGE
Shall withstand an accelerated life test of 250 hours at +200°C and 140% of rated voltage. One failure in 12 samples permitted.

CAPACITANCE DRIFT
Capacitance will drift less than 2% from its initial value at 25°C after being temperature cycled from —55°C to 200°C.

CAPACITANCE "Q"
The "Q" of Gudeman Series 371 will average 5000 up to +125°C and will exceed 500 at +200°C.

DIELECTRIC ABSORPTION
At +25°C less than .05% of the initial 100 volts charging voltage shall reappear after charging for ½ hour and immediately discharging for 10 seconds through a one ohm resistor. Absorption voltage should be read 5 minutes, but not later than 10 minutes, after removing shorting bar. Percent dielectric absorption = V absorption / V charge x 100.

MOISTURE RESISTANCE AND VIBRATION
Shall meet the requirements for moisture resistance and vibration of Specification MIL-C-25A.

CAPACITANCE CHANGE WITH TEMPERATURE
Capacitance change shall not be greater than —4% at 200°C or +2.5% at —55°C relative to the nominal value at +25°C.

ications

ANCE AND TOLERANCE

acitance limits at +25°C are determined by the specified erance.

ance is measured at or referred to a frequency of 1000 Hz.

ATION FACTOR

sipation factor at +25°C is less than 0.3% at 1000 Hz.

ION RESISTANCE

rging potential is equal to the specified operating voltage for temperature. The electrification time is two minutes. Listed e minimum values:

RATURE	CAPACITANCE (mfd.)	RXC (megohms x mfd.)	R (megohms)
5°C	>.5	100,000	
	<.5		200,000
5°C	>.5	1000	
	<.5		2000

RATED LIFE TEST

rs shall withstand an accelerated life test of 250 hours with f applied rated voltage at applicable high test temperature. e failure in 18 capacitors tested shall be allowed. A failure is as the following:

capacitor has "opened."

e capacitance has changed more than 5% from its original va .

e insulation resistance is less than 50% of its original value.

specifications

CAPACITANCE AND TOLERANCE
The capacitance limits at +25°C are determined by the specified tolerance. Capacitors are measured or referred to a frequency of 1000 cps.

DISSIPATION FACTOR
The dissipation factor at +25°C is less than 0.3% at 1000 cps.

INSULATION RESISTANCE
The charging potential is equal to the specified operating voltage for a given temperature. The minimum electrification time is two minutes. Listed below are minimum values:

Temperature	Nominal Capacitance Mfd	R X C Megohms X mfd	R Megohms
25°C	Greater than .5	100,000	
	Smaller than .5		200,000
125°C	Greater than .5	1,000	
	Smaller than .5		2,000

TEST VOLTAGE
Shall withstand a DC voltage equal to 200% of the rated voltage for one minute at a temperature of +25°C, ±5°C. Test will be applied through resistor of 1 ohm per volt.

TEMPERATURE AND IMMERSION CYCLING
Designed to meet all requirements of the applicable paragraph of the latest issue of MIL-C-18312.

ACCELERATED LIFE TEST
Shall withstand an accelerated life test of 250 hours with 140% of applied rated voltage at applicable high test temperature. Only one failure in 18 capacitors tested shall be allowed. A failure is defined as the following.
A) If the capacitor has "opened."
B) If the capacitance has changed more than 5% from its original value.
C) If the insulation resistance is less than 50% of its original value.
(D) If the DF is greater than 1%.

MOISTURE RESISTANCE
Designed to meet all requirements of the applicable paragraph of the latest issue of MIL-C-18312.

VIBRATION
Designed to withstand the Grade 3 vibration tests of the applicable paragraph of the latest issue of MIL-C-18312.

A-C VOLTAGE RATING:
(—55C to +85C Ambient)

D-C Voltage Rating	400 cps
100	65
200	120
300	200
400	240

LEAD PULL TEST
Designed to withstand a steady pull force of 5 lbs. applied axially to a capacitor lead for one minute.

LEAD BENDING TEST
The leads shall withstand without breakage the following stresses performed near the point of egress: bend 90 degrees in one direction, then back to the original position and 90 degrees in the opposite direction.

CAPACITANCE CHANGE WITH TEMPERATURE
The change of capacitance with reference to the actual value at +25°C does not exceed the following limits:

TEMPERATURE	CHANGE OF CAPACITANCE
—55°C	2%
+125°C	1%

100 VDC

"infilm" metallized polycarbonate dielectric

Series 317 & 318

- ULTRAMINIATURE
- SEALED IN RECTANGULAR EPOXY CASES
- –55°C TO +125°C WITHOUT DERATING
- SERIES 317 AXIAL LEADS
- SERIES 318 RADIAL LEADS

Outline drawings

Series 317

See Part No. Table for Lead Gauge.
Dimensions noted in inches.

Series 318

NOTE: .42x.31x18 cases have one round standoff between leads.
.55 x .31 x 18 has two standoffs between leads.

NOTE: Nickel "A" weldable leads are available with capacitors specified in this bulletin, add letter "W" as a suffix on the part number.

Specifications

CAPACITANCE AND TOLERANCE
The capacitance limits at +25°C are determined by the specified tolerance. Capacitance is measured at or referred to a frequency of 1000 cps.

DISSIPATION FACTOR
The dissipation factor at +25°C is less than 0.5% at 1000 cps.

INSULATION RESISTANCE
The minimum insulation resistance when measured at rated voltage but not to exceed 500 VDC shall be as follows:
At 25°C 100,000 megohm-mfds minimum but need not exceed 200,000 megohms.
At 125°C 100 megohm-mfds minimum but need not exceed 2000 megohms.

TEST VOLTAGE
Shall withstand a DC voltage equal to 200% of the rated voltage for one minute at a temperature of +25°C, ±5°C. Test will be applied through resistor of 1 ohm per volt.

ACCELERATED LIFE TEST
Shall withstand an accelerated life test of 250 hours with 140% of applied rated voltage at applicable high test temperature. Only one failure in 12 capacitors tested shall be allowed. A failure is defined as the following:
If the capacitor has "opened".
If the capacitance has changed more than 5% from its original value.
If the insulation resistance is less than 30% of its original specified value.
If the dissipation factor is greater than 1%.

HUMIDITY TEST
Capacitors shall withstand 250 hours of 95% relative humidity at 40°C. Voltage will not be applied. Upon completion of test, units will be dried for 24 hours.
Minimum product of insulation resistance @ 25°C shall be 33% of the original specified value.
The capacitance is not to change more than 5% of its original value.
The dissipation factor shall not exceed 1.5%.

CAPACITANCE CHANGE WITH TEMPERATURE
The change of capacitance with reference to the actual value at +25°C shall not exceed ±2%.

"thinfilm" metallized polycarbonate dielectric

series 396 & 397

ULTRAMINIATURE TUBULAR (Series 396) AND FLAT CAPACITORS (Series 397)
SEALED IN NON-METALLIC CASES WITH PLASTIC RESIN END SEALS
—55°C TO +125°C WITHOUT DERATING
100 VDC TO 200 VDC

outline drawings

Series 396

Series 397

Solid, Bare Tinned Lead
See Part No. Table for Lead Gauge
NOTE: Nickel "A" weldable leads are available!
Add suffix "W" to Part No. for nickel lead.

specifications

CAPACITANCE AND TOLERANCE

The capacitance limits at +25°C are determined by the specified tolerance.
Capacitors are measured or referred to a frequency of 1000 cps.

DISSIPATION FACTOR

The dissipation factor at +25°C shall be less than 0.5% at 1000 cps.

INSULATION RESISTANCE

The charging potential is equal to the specified operating voltage for a given temperature. The minimum electrification time is two minutes. Listed below are minimum values:

Temperature	Nominal Capacitance Mfd.	R X C Megohms X mfd.	R Megohms
25°C	Greater than .5	50,000	
	Smaller than .5		100,000
125°C	Greater than .5	500	
	Smaller than .5		1,000

TEST VOLTAGE

Shall withstand a DC voltage equal to 200% of the rated voltage for one minute at a temperature of +25°C, ±5°C. Test voltage will be applied through resistor of 1 ohm per volt.

ACCELERATED LIFE TEST

Shall withstand an accelerated life test of 250 hours with 140% of applied rated voltage at applicable high test temperature. Only one failure in 12 capacitors tested shall be allowed. A failure is defined as the following:

A) If the capacitor has "opened."
B) If the capacitance has changed more than 5% from its original value.
C) If the insulation resistance is less than 50% of the original specified value.
D) If the DF is greater than 1%.

HUMIDITY

Not intended to be operated where humidity is a problem. This series is intended for use in circuits which are encapsulated or hermetically sealed.

LEAD PULL TEST

These capacitors shall withstand a five (5) pound pull applied axially for one minute, per MIL-C-25.

LEAD BEND TEST

Leads shall be bent without breakage about the point of egress from the capacitor. First 90 degrees in one direction then back to the original position and then 90 degrees in the opposite direction.

CAPACITANCE CHANGE WITH TEMP.

The change of capacitance with reference to the actual value at 25°C will not exceed the following limits:

TEMPERATURE	CHANGE OF CAPACITANCE
— 55°C	—2%
+125°C	±1%

TYPICAL CURVES

See YELLOW SECTION for Local Offices, Phones

ecifications

SIPATION FACTOR
dissipation factor shall not exceed 1.0% when measured at or referred to a uency of 1,000 CPS at +25°C. Nominal capacitance values above 1.0 mfd. measured at or referred to a frequency of 60 cps.

ULATION RESISTANCE
minimum insulation resistance when measured with an applied potential of o 200 volts, but not to exceed the rated voltage, shall be as follows:
-25°C 10,000 megohm-mfds. minimum but need not exceed 30,000 megohms.
-85°C 500 megohm-mfds. minimum but need not exceed 3000 megohms.
+125°C 10 megohm-mfds. minimum but need not exceed 150 megohms.

ELERATED LIFE TEST
ll withstand an accelerated life test of 250 hours with 140% of applied rated age at applicable high test temperature. Only one failure in 12 capacitors ed shall be allowed.
ilure is defined as the following:
f the capacitor has "opened" or short circuited.
f the capacitance has changed more than 10% from its original value.
f the insulation resistance is less than 30% of its specified value.

T VOLTAGE
ll withstand a DC voltage equal to 200% of the rated voltage for one minute temperature of +25°C±5°C.

TAGE RATINGS
igned to operate over the temperature range of —55°C to +85°C at full rated voltage and up to +125°C with working voltages as follows:

+85°C	+125°C
200VDC	100VDC
100VDC	50VDC

MIDITY TEST
acitors shall withstand 250 hours of 95% relative humidity at 40°C. Voltage not be applied. Upon completion of test, units will be dried for four hours. imum product of insulation resistance shall be 5000 megohm-mfd but need exceed 15,000 megohms.
capacitance will change not more than 10% of its original value. The dissi- ion factor shall not increase over 1.5%.

D PULL TEST
ll withstand a five (5) pound pull applied axially for one minute.

D BEND TEST
ds shall be bent without breakage about the point of the egress from the acitor. First 90 degrees in one direction then back to the original position, then 90 degrees in the opposite direction.

Note: .42x31x.18 case have one round standoff between leads. .55x.31x.18 has two standoffs between leads.

"thinfilm" metallized mylar* dielectric

series 363 & 364

ULTRA MINIATURE FLAT AND TUBULAR CAPACITORS
SEALED IN NON-METALLIC CASES with PLASTIC RESIN END SEALS
—55°C TO +125°C
100 VDC TO 600 VDC

specifications

DISSIPATION FACTOR
The dissipation factor shall not exceed 1.0% when measured at or referred to a frequency of 1,000 CPS at +25°C per MIL-C-25C. Nominal capacitance values above 1.0 mfd. are measured at or referred to a frequency of 60 cps.

INSULATION RESISTANCE
The minimum insulation resistance when measured with an applied potential of 50 to 500 volts, but not to exceed the rated voltage, shall be as follows:
At + 25°C 50,000 megohm-mfds minimum but need not exceed 150,000 megohms
At + 85°C 500 megohm-mfds minimum but need not exceed 3000 megohms
At + 125°C 10 megohm-mfds minimum but need not exceed 150 megohms

TEST VOLTAGE
Shall withstand a DC voltage equal to 200% of the rated vol age for one minute at a temperature of +25°C, ± 5°C.

ACCELERATED LIFE TEST
Shall withstand an accelerated life test of 250 hours with 140% of applied rated voltage at applicable high test temperature. Only one failure in 12 capacitors tested shall be allowed. A failure is defined as the following:
A) If the capacitor has "opened" or short circuited.
B) If the capacitance has changed more than 10% from its original value.
C) If the insulation resistance is less than 30% of its original value.

VOLTAGE RATINGS
Designed to operate over the temperature range of —55°C to +85°C at full rated DC voltage and up to +125°C with working voltages as follows:

+85°C	+125°C
400 VDC	200 VDC
200 VDC	100 VDC
100 VDC	50 VDC

MOISTURE RESISTANCE
Shall withstand the moisture resistance requirements as specified in military specification MIL-C-25C.

VIBRATION-ACCELERATION
These capacitors shall withstand the Grade 3 vibration-acceleration requirements of MIL-C-25C.

LEAD PULL TEST
Shall withstand a five (5) pound pull applied axially for one minute, per MIL-C-25C.

LEAD BEND TEST
Leads shall be bent without breakage about the point of egress from the capacitor. First 90 degrees in one direction then back to the original position, and then 90 degrees in the opposite direction, per MIL-C-25C.

CAPACITANCE TEST WITH TEMPERATURE
The capacitance change shall not exceed the following values with reference to the +25°C capacitance value:

TEMPERATURE	% CAP CHANGE
— 55°C	—10% Maximum
+ 85°C	+ 5% Maximum
+125°C	+16% Maximum

outline drawings

Series 363

NOTE: Nickel "A" weldable leads are available with the capacitors specified in this bulletin, simply add the letter "W" as a suffix on the part number.

DIMENSIONAL TOLERANCES: T & W Under .250 ± .046, .250 & Up ± .062, Length ± 1/16"

Series 364

cations

NCE AND TOLERANCE
itance limits at 25°C are determined by the specified tolerance.
which have a nominal valu of 1 MFD or less are measured or re- a frequency of 1000 cps. Nominal capacitances above 1 MFD are mea- r referred to a frequency of 60 cps.

ON FACTOR
ation factor at 25°C is less than 1.0%. Reference frequencies are as above.

N RESISTANCE
ing potential is equal to the specified operating voltage for a given re. The minimum electrification time is two minutes. Listed below um values:

ure	Nominal Capacitance MFD	R x C Megohms x MFD	R Megohms
	Greater than .333	50,000	
	Smaller than .333		150,000
	Greater than .167	500	
	Smaller than .167		3,000
	Greater than .067	10	
	Smaller than .067		150

TAGE
to withstand a test potential equal to 200% of the rated voltage for es at 25°C.
voltage must be applied and discharged through a current limiting re- f approximately 1000 ohms.

RATING ABOVE 85°
ng of the voltage is required for nominal ratings of 200, 400 and 600 00 VDC capacitors, however, are to be derated above 85°C at the rate per degree C.

TED LIFE TEST — AT 125°C
s are designed to withstand a test potential equal to 140% of the 125°C for a period of 250 hours.
est voltage must be applied and discharged through a current limiting e of approximately 1000 ohms.

TURE AND IMMERSION CYCLING
to meet all requirements of the applicable paragraph of the latest MIL-C-25.

E RESISTANCE
to meet all requirements of the applicable paragraph of the latest issue 25.

N
to withstand the vibration tests of the applicable paragraph of the ue of MIL-C-25.

LL TEST
's of this series are designed to withstand a steady pull force of 5 lbs. xially to a capacitor lead for one minute.

NDING TEST
s withstand without breakage the following stresses performed near the egress: bend 90 degrees in one direction, then back to the original posi- 90 degrees in the opposite direction.

NCE CHANGE WITH TEMPERATURE
ge of capacitance with reference to the actual value at 25°C does not e following limits:

TEMPERATURE	CHANGE OF CAPACITANCE
— 55°C	— 8%
+ 85°C	+ 5%
+125°C	+18%

AGE RATING
to operate safely up to the following AC voltages at 85°C.

DC VOLTAGE RATING	AC — VOLTAGES AT 85°C (rms) Up to 120 cps	Up to 400 cps
100	70	56
200	140	70
400	280	110
600	420	160

°C operation the listed AC voltages should be derated to 60% of the ues.
C and DC voltages are present, the sum of the DC voltage and the amp- f the AC voltage must not exceed the specified DC-rating at a given ure.

F indicates "Floating". Substitute "G" for "Grounded".
Add following to Part No. for Tolerance: —20 = ±20%; —10 = ±10%; —5 = ±5%.

TYPICAL CURVES

polyester & kraft capacitor tissue dielectric

series 51

WAX IMPREGNATED — METALLIZED DIELECTRIC
HERMETICALLY SEALED (GLASS TO METAL)
TUBULAR METAL CASE
—55°C TO +125°C WITHOUT DERATING
100 THRU 600 VDC

outline drawing

Standard leads consist of solid, bare, tined wire. Special Nickel leads are available for applications requiring a higher degree of weldability.

LEAD SPECIFICATIONS

Case Diameter (inches)	Lead Gauge (AWG)
.187	24
.235 and .312	22
.400 and up	20

specifications

CAPACITANCE AND TOLERANCE
The capacitance limits at +25°C are determined by the specified tolerance. Capacitors which have a nominal value of 1 MFD or less are measured at or referred to a frequency of 1000 cps. Nominal capacitances above 1 MFD are measured at or referred to a frequency of 60 cps.

DISSIPATION FACTOR
The dissipation factor at +25°C is less than 1.0%. Reference frequencies are as specified above.

INSULATION RESISTANCE
The charging potential is equal to the specified operating voltage for a given temperature. The minimum electrification time is two minutes.

TEMPERATURE	Nominal Capacitance MFD	Voltage VDC	R x C Megohms x MFD	R Megohms
+ 25°C	Greater than .167	ALL	2,000	
	Smaller than .167			12,000
+ 125°C	Greater than .067	100 thru 300 VDC	10	
	Smaller than .067			150
	Greater than .067	400 and 600 VDC	40	
	Smaller than .067			600

TEST VOLTAGE
Designed to withstand a test potential equal to 200% of the rated voltage for two minutes at + 25°C.
The test voltage must be applied and discharged through a current limiting resistance of approximately 1,000 ohms.

VOLTAGE RATING ABOVE 85°C.
No derating of the voltage is required for nominal ratings of 200 through 600 VDC. All 100 VDC capacitors, however, are to be derated above + 85°C at the rate of 1 VDC per degree C.

ACCELERATED LIFE TEST — AT 125°C
Designed to withstand a test potential equal to 140% of the rated voltage at + 125°C for a period of 250 hours.
The life test voltage must be applied and discharged through a current limiting resistance of approximately 1,000 ohms.

TEMPERATURE AND IMMERSION CYCLING
Designed to meet all requirements of the applicable paragraph of the latest issue of MIL-C-25.

MOISTURE RESISTANCE
Designed to meet all requirements of the applicable paragraph of the latest issue of MIL-C-25.

VIBRATION
Designed to withstand the vibration tests of the applicable paragraph of the latest issue of MIL-C-25.

AC OPERATION
51 Series capacitors are designed to operate up to the following AC voltages.

NOMINAL VOLTAGE VDC	AC VOLTAGES AT + 85°C (rms) Up to 120 cps	Up to 400 cps
100	70	56
200	140	70
300	220	96
400	280	110
600	420	160

For + 105°C operation the listed AC voltages should be derated to 60% of the + 85°C values.
If both AC and DC voltages are present, the sum of the DC voltage and the amplitude of the AC voltage must not exceed the specified DC rating at a given temperature.

LEAD PULL TEST
Capacitors of this series are designed to withstand a steady pull force of 5 lbs. applied axially to a capacitor lead for one minute.

LEAD BENDING TEST
The leads withstand without breakage the following stresses performed near the point of egress: bend 90 degrees in one direction, then back to the original position and 90 degrees in the opposite direction.

CAPACITANCE CHANGE WITH TEMPERATURE
The change of capacitance with reference to the actual value at 25°C does not exceed the following limits.

TEMPERATURE	CHANGE OF CAPACITANCE
— 55°C	— 10%
+ 85°C	+ 4%
+ 125°C	+ 13%

metalized paper dielectric

series 88

HERMETICALLY SEALED (GLASS TO METAL)
TUBULAR METAL CASE
−55°C TO +125°C WITHOUT DERATING
50 V.
WIRE LEADS OR LUG TERMINALS

outline drawing

Solder Tinned Wire Leads.
The following lead sizes will apply:
.195 and .312 diameter #22 AWG
.500 diameter and up #20 AWG
NOTE: Mounting by means of lead wires is not recommended for units larger than .562 x 1 13/16" long
NOTE: LE WILL BE FURNISHED WITH #22 AWG LEADS.

specifications

CAPACITANCE AND TOLERANCE
The capacitance shall be within the specified tolerance limits of the nominal rat
Capacitors of 1.0 MFD or less shall be measured at, or referred to, a frequency of 1000 cycles per second at 25°C. Capacitors greater than 1.0 MFD shall be measured at, or referred to, a frequency of 60 cycles per second at 25°C.

DISSIPATION FACTOR
The dissipation factor shall be a maximum of 1.0% at 25°C.
Capacitors of 1.0 MFD or less shall be measured at, or referred to, a frequency of 1000 cycle per second. Capacitors above 1.0 MFD shall be measured at, or referred to, a frequency of 60 cycles per second.

INSULATION RESISTANCE
The insulation resistance shall be measured at a charging potential of 50 VDC.
The insulation resistance shall equal or exceed the following for capacitance values up to and including 4.0 MFD.

Temperature	Tolerance
25°C	4000 megohms X mfd or 12,000 megohms, whichever is less
85°C	100 megohms X mfd or 300 megohms, whichever is less
125°C	10 megohms X mfd or 150 megohms, whichever is less

For values above 4.0 MFD, the insulation resistance shall equal or exceed the following:

Temperature	Tolerance
25°C	2000 megohms X mfd
85°C	50 megohms X mfd
125°C	5 megohms X mfd

TEST VOLTAGE
Shall withstand a D.C. potential of 200% of rated D.C. voltage at a temperature of 25°C applied for a period not to exceed two minutes, without permanent breakdown.
When the case is not a terminal, they shall withstand a D.C. potential of 200% of rated voltage between the case and the terminals.

LIFE TEST
Shall withstand a test potential of 140% of the rated D.C. voltage at 125°C for 250 hours.
One failure out of twelve (12) samples tested is allowed. A capacitor will be considered to have failed when:
1. The capacitance has changed more than 10% from its original value.
2. The insulation resistance is less than 50% of its original requirements.
3. It exhibits a permanent open or short circuit.

TEMPERATURE & IMMERSION CYCLING
The capacitors shall meet the temperature and immersion cycling test of Military Specification MIL-C-25C.

MOISTURE RESISTANCE
Shall meet the moisture resistance requirements of Military Specification MIL-C-25C.

VIBRATION
Shall withstand the Grade 3 vibration as specified in Military Specification MIL-C-25C.

CORROSION RESISTANCE
The capacitors shall meet the corrosion test of Military Specification MIL-C-25C.

specifications (continued)

LEAD PULL TEST
Shall withstand a pull of 5 lbs. applied axially to the lead for a period of one minute.

LEAD BEND TEST
The leads shall withstand without breakage, a bend at the point of egress from the capacitor first 90° in one direction, back to the original position and then 90° in the opposite direction.

SHOCK
When securely mounted by their normal mounting means, the capacitors shall withstand 3 impact shocks of 50G intensity (18 shocks total) in each direction of each of the three major axis. The time duration of each impulse shock shall be 11 ±1 milli-seconds.
There shall be no intermittent or permanent open or short circuit as a result of this test.

CAPACITANCE CHANGE WITH TEMPERATURE
The Capacitance change at 125°C shall not be greater than 5% of the measured capacitance value at +25°C.
The capacitance change at −55°C shall not be greater than 10% of the measured capacitance value at +25°C.

HERMETICALLY SEALED IN GLASS CASES
HIGH VOLTAGE — 1000 VDC THRU 10,000 VDC
—55°C TO +85°C WITHOUT DERATING
75% RATING TO 105°C

specifications

HIGH ALTITUDE APPLICATION:
The DC Voltage ratings listed are primarily for application at a barometric pressure between 28 and 32 inches. For high altitude application the permissible DC voltage should never exceed the rated DC voltage and shall be equal to or less than the maximum permissible operating voltage per length of glass tubing as follows:

PERMISSIBLE VOLTAGE RATING FOR HIGH ALTITUDE

Tube Length (in.)	1 3/16	1 5/16	1 3/4	2 1/4	2 3/4	3 1/2	4 1/4
Max. Volt. at 50,000 ft.	4500	5000	5300	5500	6000	7000	8000
Max. Volt. at 60,000 ft.	2400	2800	3500	4000	4300	4500	4700

RIPPLE VOLTAGE:
The ratings given are the steady-state DC voltage, or the DC voltage plus the permissible ripple voltage wherein the peak value of the permissible ripple voltage shall not exceed:

20% of the rating at 60 cps.
15% of the rating at 120 cps.
8% of the rating at 400 cps.
5% of the rating at 1000 cps.

INSULATION RESISTANCE:
The minimum insulation resistance when measured with an applied potential of 100 to 500 volts shall be as follows:
At 25°C—10,000 megohm-mfds. minimum but need not exceed 20,000 megohms.
At 85°C—100 megohm-mfds. minimum but need not exceed 1000 megohms.
At 105°C—30 megohm-mfds. minimum but need not exceed 300 megohms.

TEST VOLTAGE:
Shall withstand a DC voltage equal to 200% of the rated voltage for five seconds at a temperature of 25°C.

LIFE TEST:
Shall withstand an accelerated life test of 250 hours at 85°C with an applied voltage as follows:

Watt-Second Group	% of Rated Voltage for life test
0. to 0.49 watt-seconds	140
0.5 to 4.9 watt-seconds	130

One failure in 12 samples tested is permitted.

VOLTAGE DERATING:
When operated at high ambient temperature the capacitors shall be derated as follows:
At 85°C ..... No derating
At 105°C ..... 25% derating

POWER FACTOR:
The power factor at 25°C shall not be more than 1% when measured at or referred to a frequency of 1000 cycles per second.

LEAD PULL TEST
Shall withstand for one minute a steady 5 pound pull applied axially.

VIBRATION:
The GC246 Series capacitors (wire leads) shall be mounted and soldered to rigidly supported terminals and the length of the lead shall be approximately 5/8 of an inch when measured from the capacitor to the supporting terminal. The GC245 Series shall be mounted to brackets.
The capacitors when mounted and subjected to a simple harmonic motion having an amplitude of 0.03 inches (Total excursion 0.06 inches maximum), and the frequency being varied uniformly between 10 to 55 cycles per second and return in approximately one minute. This motion shall be applied for a period of three hours in any direction. During the last 1/2 hour of vibration measurement shall be made for intermittent contacts, open circuits or short circuits. One failure in six samples tested is permitted.

TEMPERATURE AND IMMERSION CYCLING:
These capacitors shall be subjected to five thermal cycles as follows:

Start at +25°C
Raise to +105°C
Return to +25°C
Reduce to —55°C
Return to +25°C

After the thermal cycle the capacitors shall be subjected to five successive immersion cycles in two tanks of saturated solutions of sodium chloride and water, one at 65°C and the other at 0°C. The period of each cycle shall consist of 60 minutes immersion in each tank. After immersion cycling, the capacitors shall be washed in tap water, surface dried with a clean cloth and dried from 4 to 6 rours at room temperature. Tre capacitor srall meet the following requirements:

Dielectric Strength ..... 125% Rated Voltage
Insulation Resistance ..... 4000 megohms-mfds. minimum but need not exceed 8000 megohms.

In addition, the capacitors shall show no harmful or extensive corrosion and at least 90% of the exposed metallic surfaces of the capacitors shall be protected by the finish.

HI ALTITUDE APPLICATION:
Th C Voltage ratings listed are primarily for application at a baro- m c pressure between 28 and 32 inches. For high altitude application th ermissible DC voltage should never exceed the rated DC voltage an hall be equal to or less than the maximum permissible operating vo e per length of glass tubing as follows:

PERMISSIBLE VOLTAGE RATING FOR HIGH ALTITUDE							
Tu Length (in.)	1 3/16	1 9/16	1 3/4	2 1/4	2 3/4	3 1/2	4 1/4
M Volt at 50,000 Ft.	4500	5000	5300	5500	6000	7000	8000
M Volt at 60,000 Ft.	2400	2800	3500	4000	4300	4500	4700

R E VOLTAGE:
Th atings given are the steady-state DC voltage, or the DC voltage p the permissible ripple voltage wherein ahe peak value of the permis- si ripple voltage shall not exceed:
20% of the rating at 60 cps.
15% of the rating at 120 cps.
8% of the rating at 400 cps.
5% of the rating at 1000 cps.
1% of the rating at 10,000 cps.

IN LATION RESISTANCE:
Th minimum insulation resistance when measured with an applied p tial of 500 volts shall be as follows:
+ 25°C—20,000 megohm-mfds. minimum but need not exceed 100,000 megohms.
+125°C—20 megohm-mfds. minimum but need not exceed 250 megohms.

T VOLTAGE:
S l withstand a DC Voltage equal to 200% of the rated voltage for f seconds at a temperature of +25°C.

A ELERATED LIFE TEST:
Th e capacitors shall withstand an accelerated life test at 250 hours a -125°C with an applied voltage as follows:

Watt-Second Group	% of Rated Voltage for Life Test
0. to 0.49 Watt-Seconds	140
0.5 to 4.9 Watt-Seconds	130

C failure in 12 samples tested is permitted.

T PERATURE AND IMMERSION CYCLING:
S l meet the temperature and immersion cycling tests of military s cification MIL-C-25C.

P ER FACTOR:
T power factor of the capacitors at +25°C shall not be more than 1 when measured at or referred to a frequency of 1000 cycles per s ond.

M STURE RESISTANCE:
S ll meet the moisture resistance tests of the military specification M -C-25C.

V RATION:
S ll meet the high frequency vibration requirements of MIL-C-25C.

paper plastic dielectric

series 462

HIGH RELIABILITY CAPACITORS
HERMETICALLY SEALED (GLASS TO METAL)

TUBULAR METALLIC CASE

—65°C TO +125°C WITHOUT DERATING

NOTE: The dimensions shown are for grounded (XRGS) units. For floating (XRFS) units add 3/32" to length for diameters of .255, .332 and .420. Above .420 diameter, add 1/16" to length.

Furnished with "copper-clad" steel wire leads.

Case Diameter (In.)	AWG Size
.235 to .312	22
.400 to 1.00	20

"G" in Part No. indicates "Grounded". Substitute "F" for "Floating". Add following to part no. for tolerance: —K = ±10%; —J = ±5%.

specifications

XRFS462 units meet all electrical environmental requirements of MIL-C-14157.

INSULATION RESISTANCE

The minimum insulation resistance when measured in accordance with Specification MIL-C-14157 shall be as follows:

At 25°C—15,000 megohm-mfds. for capacitance values .6MFD and greater. 25,000 megohms for capacitance values below .6 MFD.

AT 125°C—20 megohm-mfds. for capacitance values .08 MFD and greater. 250 megohms for capacitance values below .08 MFD.

CAPACITANCE CHANGE FROM +25°C ±5°C.

The maximum capacitance change shall be as follows:

At — 65°C ±3°C . . . + 2%, —10%
At +125°C ±3°C . . . +10%, — 3%

DISSIPATION FACTOR

The dissipation factor when measured at room temperature shall not be more than 0.6%.

TYPICAL CURVES

Miniature Aluminum Electrolytic, Polyester Film & Metalized Polyester

IEC CAPACITORS

al where any high quality capacitors are required. Dependable in every application m vacuum tube to solid state circuitry utilizing point-to-point or printed circuit mounting.

ALUMINUM ELECTROLYTICS

- Vinyl covered aluminum case, axial and radial leads
- Moisture tight end seal
- Welded construction
- Extremely low leakage characteristics
- High purity etched foil
- Excellent performance and long life over specified ranges

	Miniature Low Voltage	General Purpose	Non-Polarized
Voltage Range	3 to 50 volts d.c.	100 to 500 volts d.c.	3 to 50 volts d.c.
Capacitance	0.5 to 3000 uf.	1.0 to 1000 uf.	1.0 to 500 uf.
Operating Temp.	−25°C to +70°C −10°C to +85°C	−25°C to +70°C −10°C to +85°C	−10°C to +70°C −10°C to +85°C

POLYESTER FILM

broad range of miniature poly- ster film capacitors, with radial eads. Voltage ranges: 100, 200, 00, 600 volts d.c. Capacitance ange: .001 μf. to 0.5 μf. Operat- ng temperature from −40°C to +85°C with no derating. Stan- lard tolerances of ±20%, ±10%; closer tolerances available.

• Temperature stable, low dissi- pation factor, low leakage, high nsulation resistance.

METALIZED POLYESTER

A complete line of sub-miniature metalized polyester film capacitors with axial leads. Wide temperature range, temperature stable, long life. These capacitors have a high dielectric strength, low dissipation factor, and a high insulation resistance. Highly reliable, non-inductive self-healing characteristics.

In voltage ranges of 250, 400, and 600 volts d.c. Tolerances of ±20%, 10% and 5% available. Capacitors will withstand, without injury, flash voltages 1½ times the working voltage, for as long as 5 seconds. Temperature stability of less than ±5% deviation from the 25°C value in the range of −20°C to +85°C.

POLYESTER FILM

A complete line on non-inductively wound polyester film capacitors. These capacitors have uniformly cut and crimped leads which are ideally suited for printed circuit applications. Available in voltages of 100, 200, 400 and 600 Volts "DC" with capacitor tolerance ±20%, ±10%, and ±5%. Operating temperature range −40+85% without derating. They are temperature stable and highly reliable.

DIVISION OF INTERNATIONAL TELEPHONE AND TELEGRAPH CORPORATION

As a result of vacuum capacitors, modern transmitters are smaller in size, offer superior, more reliable performance and are far easier to tune and keep tuned. In the high voltage situation common to high powered transmitters, greater capacitance is achieved in a smaller space with vacuum capacitors. Breakdown leading to expensive and critical downtime is far less likely because vacuum offers no dielectric to puncture and is self healing after moderate overloads.

(1) Current ratings can usually be increased by 50% with proper forced air cooling, and up to 400% with water cooling.

(2) Nominal dimensions are for the largest unit of each type.

(3) Voltage and current limitation are dependent upon capacity and frequency. Specific voltage and current information at all frequencies is available upon request. Current rating is for largest capacity unit of each type.

Jennings application engineers are available to discuss special application problems. If necessary we will run special tests in the Jennings Radio Frequency Testing Laboratory, where equipment is available with frequencies up to 600 MHz, and power ratings up to 100 kw.

NOTE: For further details on any of ITT Jennings vacum capacitors request Catalog No. 101.

JFD

FIXED AND VARIABLE CAPACITORS

CERAMIC VARIABLES offer a wide choice of mountin con figurations and capacitance values for use in the lo cos commercial thru high grade Military markets. Meet a fica ble Mil-C-81A requirements.
Modutrims—especially designed for micromodule and hybri circuit applications. MT's are available in 5 basic mo ting configurations. Capacitance range 5 to 60 pf. max.
DV-5's—5 mm's in diameter, these microminiature u s o cupy less than .050 square inches of printed circuit oar space. Capacitance range 9 to 30 pf. max.
DV-11's—9.5 mm's in diameter, these low cost capacito wer designed for TV, AM, FM receivers, test equipment, c mu nication equipment, low power transmitters, filters and ela line applications. 4 mounting configurations are av able Capacitance range 8 to 60 pf. max.
Write for Ceramic Variable catalogs.

AIR VARIABLES—designed for high frequency requirements. JFD air variables are rugged, small in size and offer many unique advantages over competitive units. These are: a metal rotor that provides more constant torque during and beyond torque life (600 turns), increased electrical contact assuring lower noise levels and a unique internal guiding element that keeps the rotor centered under the severest environmental conditions. Conforms to applicable portions of Mil-C-14409. Five series comprise this line.

MVM 003—Microminiature in size. Capacitance range is 0.35 pf to 3.5 pf.
MVM 006—Microminiature in size. Capacitance range 0.40—6.0 pf (not shown).
MVM 010—Capacitance range 0.8—10 pf.
MVM 020—Capacitance range 1.0—20 pf.
VAM 010—Capacitance range 0.8—10 pf (not shown).
All MVM's are completely interchangeable with competitive units. Write for Air Variable Catalogs.

UNICERAM HI Q & K CHIPS—Monolithic Hi Q chips fer the ultimate in stability and small size for high frequ cy applications. With typical Q values of 10,000 and more; t se units offer a high ratio of capacity per unit volume. ail able in 5 case sizes from .109" to .406" and in capaci ce ranges of .5 pf to 3000 pf. Meet or exceed portion of MIL-C-11272B.
Uniceram Hi Q capacitors are also available in leaded in figurations. 5 case sizes are included with capacitance al ues of 0.5 pf to 3000 pf.
Hi K chips are ideal for high density packaging in d wood, hybrid and thick film circuits. Manufactured i 18 case sizes. Capacitance range 5 pf to 1.5 mfd. Meet o x ceed portions of MIL-C-11015 and MIL-C-39014.
Hi Q and K chips are available with silver leads and gl s encapsulation for difficult applications.
Write for Uniceram catalogs.

HI RF POWER CAPACITORS—FIXED AND VARIABLE were designed for communication applications.
Piston Trimmers—units feature a unique fused quartz cylinder that yields an extremely low dissipation factor and temperature coefficient. Piston Trimmers operate over a frequency range of from 1 to 30 MHz. Two models comprise this series: VCJ1616M—operates on an RF voltage level of 3100 V peak at +25°C derated to 2500 V peak at +200°C (superimposed on 2500 V DC). Capacitance range 0.5 to 5 pf. VCJ1616E—operates on an RF voltage level of 4,000 V peak at +25°C derated to 3500 V peak at +200°C (superimposed on 2,500 V DC). Capacitance range: 0.9 to 5 pf.—These units can be used at much higher frequencies with proper RF voltage derating.
UFP-Fixed Ceramics—UFP's are the smallest RF power capacitors made. Offered in three standard sizes, these highly stable and reliable fixed ceramics have been used in frequencies as high as 200 MHz. Capacitance values from 10 to 3,000 pf (±.5 for low capacitance values; ±5% and ±10% for higher values).
Write for Hi RF Voltage Piston Trimmer and Uniceram High RF Current Fixed Ceramic Catalogs.

JFD OFFERS THE INDUSTRIES LARGEST SELECTION OF GLASS AND QUARTZ PISTON TRIMMER CAPACITORS. OVER 3000 MODELS ARE AVAILABLE.

variable capacitors

For two decades, the name Johanson has been synonymous with quality in the development and manufacture of capacitors. Electronic design engineers have looked to Johanson to supply the creative design know-how needed to meet their most critical application problems.

We build quality into our capacitors from design through manufacture . . . our "old world" craftsmanship, coupled with sophisticated equipment and control procedures, along with the manufacturing experience gained by producing millions of capacitors insure that when you specify Johanson—you are specifying the finest capacitors made . . . "the industry standard for excellence."

HIGH Q VARIABLE AIR CAPACITORS

Model 2950—5500

Model 2951—5501

Model 2954—5502

These variable air capacitors offer the user an extended capacitance range with exceptionally high Q yet in a miniature size. They are ruggedly designed for protection against shock, vibration, fungus, salt spray and humidity . . . plus all the other contribution features that have made Johanson capacitors the industry standard of excellence.

The 5200, 5400 and 5500 series features Johanson's patented one piece integral contact mechanism which provides Q's previously unavailable in trimmer capacitors as well as critical thermal stability and extremely low dynamic noise.

GENERAL SPECIFICATIONS

Working Voltage	250 VDC (Test Voltage 500 VDC)

GENERAL PURPOSE PISTON TRIMMER CAPACITORS

Model 7330

Model 7331

Model 7332

The Johanson 7330 series of variable capacitors is ideally suited for both commercial and military applications. The unique solid metal band design assures electrical and mechanical reliability far in excess of conventional trimmers. The three mounting configurations available in this series affords the circuit designer wide latitude in mechanical layout.

Working Voltage 500 VDC (Test 1000 VDC)

Part No.	Q Factor @ 1 MHz	Capacitance Range	Temperature Coefficient	List Price
7330	>900	1.0 pf - 10.0 pf	0±50 ppm/°C	3.55
7331	>900	1.5 pf - 10.0 pf	0±50 ppm/°C	3.75
7332	>900	1.0 pf - 10.0 pf	0±50 ppm/°C	3.95

VERTICAL MOUNT AIR CAPACITORS FOR PRINTED CIRCUIT APPLICATIONS

Model 8051

Model 8052

Model 8053

The Johanson 8050 series is a unique design concept of vertical mounting of variable air capacitors. They offer space saving advantages over the standard printed circuit units. The capacitors can be adjusted through the circuit board eliminating approach channels required in the standard type units. The overall height of the mounted unit allows this series of capacitor to be used on printed circuit boards mounted on half inch centers.

Part No.	Q Factor @ 100 MHz	Capacitance Range	Temperature Coefficient	List Price
8051	>5000	.5 pf - 3.5 pf	0±50 ppm/°C	6.60
8052	>2000	1.0 pf - 10.0 pf	0±20 ppm/°C	4.60
8053	>1500	1.0 pf - 14.0 pf	0±50 ppm/°C	5.30

MICROCIRCUIT TRIMMER CAPACITORS

Model 7200

The Johanson 7200 series is the smallest device of this type available and is ideally suited for HF oscillators, *strip lines,* balancing of semiconductors and microwave components as well as for trimming of small fixed capacitors. Electrically, they have a tuning ratio of 10:1 as well as high working voltage and Q's not previously available in such a small package.

Model 7201

Part No.	Q Factor @ 100 MHz	Capacitance Range	Temperature Coefficient	List Price
7200	>500	0.1 pf - 1.3 pf	50±50 ppm/°C	4.5
7201	>500	0.1 pf - 1.3 pf	50±50 ppm/°C	5.5

MINIATURE HIGH Q VARIABLE AIR CAPACITORS

Models 4640 & 5702

The Johanson 4600 series features in a miniature size high Q, rugged construction, high selectivity and high sensitivity. This series is ideal for both military and commercial applications where reliability and performance are critical.

The Johanson 5700 series is similar to the 4600 series but incorporates the new patented contact mechanism. This design affords Q's previously unavailable in trimmer capacitors as well as providing outstanding tuning stability and extremely low dynamic noise.

Models 4642 & 5701

Part No.	Q Factor @ 100 MHz	Capacitance Range	Temperature Coefficient	List Price
4640	>5000	.4 pf - 6.0 pf	0±50 ppm/°C	6.8
4642	>5000	.4 pf - 6.0 pf	0±50 ppm/°C	6.8
4643	>5000	.4 pf - 6.0 pf	0±50 ppm/°C	6.8
5701	>10000	.4 pf - 6.0 pf	0±15 ppm/°C	7.1
5702	>10000	.4 pf - 6.0 pf	0±15 ppm/°C	7.1
5703	>10000	.4 pf - 6.0 pf	0±15 ppm/°C	7.1

Models 4643 & 5703

MINIATURE PISTON TRIMMER CAPACITORS

Models 7209 & 7210

Models 7211 & 7213

Part No.	Dim. A
7209	21/32"
7210	3/8"

Part No.	Dim. A	Dim. B
7211	21/32"	21/64"
7213	3/8"	5/16"

This series of capacitors are miniature versions of glass dielectric trimmers and are suited for a wide variety of industrial and military applications. The unique drive mechanism affords precision tuning and electrical stability. The two mounting styles and the exclusive round nut design aid the designer in high component packaging density.

Part No.	Q Factor @ 100 MHz	Capacitance Range	Temperature Coefficient	List Price
7209	>500	.5 pf - 7.5 pf	0±100 ppm/°C	4.35
7210	>500	.3 pf - 3.0 pf	0±100 ppm/°C	4.15
7211	>500	.5 pf - 7.5 pf	0±100 ppm/°C	4.45
7213	>500	.3 pf - 3.0 pf	0±100 ppm/°C	4.25

SUBMINIATURE ULTRA HIGH Q VARIABLE AIR CAPACITORS

Models 4700 & 5802

The Johanson 4700 series provides 10:1 capacitance ratio in microminiature size, extra fine tuning of <.35 pf per turn as well as high Q (>1500 @ 500 MHz). Their ultra rugged construction and fine tuning resolution assures reliability in the most critical applications.

The 5800 series incorporates the new patented contact mechanism which affords extremely high Q's, outstanding tuning stability and low dynamic noise.

Models 4701 & 5800

Part No.	Q Factor @ 100 MHz	Capacitance Range	Temperature Coefficient	List Price
4700	>5000	0.35 pf - 3.5 pf	0±50 ppm/°C	6.15
4701	>5000	0.35 pf - 3.5 pf	0±50 ppm/°C	6.15

HIGH VOLTAGE VARIABLE AIR CAPACITORS

Model 2901

Model 2902

Model 2903

The Johanson 2900 series is rated at *twi* t *voltage* of standard variable air capacitors. working voltage is 500 VDC and test volt 1000 VDC. Because of their unique desi 2900 series provides greater reliability unde age stress and vibration. This series is ideally to applications where small size and high w voltages are a design criteria.

Part No.	Q Factor @ 100 MHz	Capacitance Range	Temperature Coefficient	List Pric
2901	>3000	1.0 pf - 10.0 pf	0±20 ppm/°C	3.85
2902	>3000	1.0 pf - 10.0 pf	0±20 ppm/°C	3.85
2903	>3000	1.0 pf - 10.0 pf	0±20 ppm/°C	4.85

HIGH RF VOLTAGE QUARTZ TRIMMER CAPACITORS

Models 7168 & 7585

The Johanson 7168 and 7585 quartz trimmer c pacitors feature a working voltage of 2500 VD and 2500 volt peak RF at 30 mc with a dielectr strength of 10,000 VDC. This series bridges the ga between the low power handling capabilities conventional piston trimmer capacitors and th extremely high power capabilities of vacuu capacitors.

GENERAL SPECIFICATIONS

Voltage Rating	2500 VDC & 2500v peak RF @ 30 mc applied simultaneously.
Dielectric Strength	10,000 VDC
Insulation Resistance @ 25°C	10^6 megohms
Temperature Coefficient	0 ± 100 ppm/°C
Current at 30 mc	2 Amps

Part No.	Q Factor @ 1 MHz	Capacitance Rating	List Price
7168	>2000	0.5 pf - 5.0 pf	8.65
7585	>2000	0.8 pf - 10.0 pf	8.95

HIGH VACUUM VARIABLE CAPACITORS

Kilovac® CORPORATION

KILOVAC, leading manufacturer of high voltage vacuum relays, PENTA power tubes and DOW-KEY coaxial relays, now offers a line of high voltage vacuum variable capacitors for the most demanding applications. The use of a high vacuum as dielectric in variable capacitors results in a component with unique characteristics, particularly suited to application in high power oscillator and amplifier circuits. The maximum capacitance that can be provided in a single unit is normally a few thousand picofarads, but the high dielectric strength and freedom from dust contamination, humidity, etc. give the vacuum capacitor a far higher voltage capability than air dielectric capacitors of similar size. Vacuum capacitors have frequently been used to replace existing air dielectric capacitors many times their size, with the additional benefits of greater reliability and easier resetting.

The KVC-1 Series is a high voltage high vacuum variable capacitor line with a capacitance range of 7.0 to 1000pF. The capacitance is varied by rotating a 0.500 inch diameter shaft and the specified range is covered by 18 turns. After the first six turns from the minimum capacitance position, the variation of capacitance with tuner turns is approximately linear.

Capacitors may be supplied with a suitable mounting flange. Where other means of mounting are employed, care must be taken to avoid distortion of the metal and consequent damage to the glass seals.

Natural cooling is adequate for operation within the maximum ratings at ambient temperatures up to 55°C.

Variable capacitors

CERAMIC DISC TRIMMERS

TEFLON TRIMMER

TYPE "T"

TYPE "U"

TYPE "V"

Sub-miniature PC types to large, heavy duty units

Whatever the choice . . . sub-miniature capacitors for printed circuit use—or large heavy duty types . . . design and development engineers specify Johnson variable capacitors.

More than eleven basic capacitor series available in a wide selection of single section, dual section, butterfly and differential types. Stock capacitors in a wide range of plate spacings, capacity per section, breakdown ratings, and finishes meet many military and commercial applications . . . specials available in production quantities.

CERAMIC DISC TRIMMERS—These new sub-miniature ceramic disc trimmers exhibit extreme environmental stability and long life due to the encapsulation of the rotor plate in titinate. Diameter only 0.218". Stator is high alumina for lower loss and higher strength. Smooth, linear tuning due to precision lapped bearing surfaces. Designed to meet or exceed performance criteria of MIL-C-81B. Operating range is —55° to 125°C. NPO temperature characteristics. Type A. Working voltage 100 VDC up to 85°C, 50 VDC up to 125°C. Peak withstanding voltage is greater than twice the working voltage.

TEFLON TRIMMERS—Ideal for VHF and UHF applications requiring low minimum capacity and delta C . . . high Q (2000 at 1 mHz) . . . linear tuning . . . temperature range —55° to ±150°C. Voltage breakdown 2000 VDC. PC mount .25 to 1.5 pf; solder lug .25 to 1.5 pf; panel mount .30 to 2.9 pf.

TYPE "T"—New sub-miniature air dielectric trimmer for VHF and UHF applications that call for small size (.310" dia.), high Q (greater than 1500 at 1 mHz), low TC, and low cost. Mounting dimensions of vertical mount "T" identical with ⅜" dia. PC ceramic disc trimmers. Nominal capacities from 1.3 pF to 15.7 pF. Minimum voltage breakdown is 250 VDC. End frame is 95% alumina, grade L624 or better, DC200 treated. Silver plated, Iridited metal parts resist discoloration. Plates are from one piece solid brass for uniformity, stability, and no moisture entrapment. Temp. coefficient is plus 30 ± 15 ppm/°C. Excellent retrace.

TYPE "U"—less than 0.23 sq. inch mounting area required. Rotors and stators machined from one piece of solid brass. Outstanding reliability with exceptionally uniform delta C and voltage characteristics. Highly resistant to shock and vibration—provide freedom from moisture entrapment. Voltage breakdown to 110 VDC. Silver-plated metal parts—ceramic is steatite Grade L-423 or better. Single Section types available in: Printed Circuit (vertical and horizontal mounting models), Two-Hole, and Bushing Mount styles—Differential type for Printed Circuit mounting.

TYPE "V"—High capacity in minimum space. Printed circuit and panel mount types mount in less than 0.3 sq. in. area. Rotors and stators precision machined from one piece of solid brass for high reliability and

Detailed components catalog is available free . . .

CAPACITORS • TUBE SOCKETS • CONNECTORS • PILOT LIGHTS • INSULATORS

ou tanding mechanical stability! High "Q" (greater th 1500 at 1 mHz.) . . . low temperature coefficient (p 50 ± 20 PPM/°C). Metal parts, silverplated—ce-ra is steatite grade L-423, or better. Voltage breakdown ra g 650 VDC. Slotted rotor or shaft extension for con-ve nt adjustment.

T E "S"—Slightly larger than the "M". Peak voltage ra g: 850 volts—plate spacing .013", other spacings av able. Solder plate construction; securely anchored st r supports; DC-200 treated insulator; nickel-pl d brass plates. Single Section, Butterfly, Differ-en l and Dual Types with straight locking and screw-dr r shafts.

T E "K"—Single Section—widely used for military an commercial applications. DC-200 treated insula-to notched stator terminals; extra rigid soldered pl e construction. Peak voltage ratings: 1000 volts. P e spacing .015". Available in production quanti-ti to MIL-C-92A specifications . . . variations avail-ab .

T E "R"—Single Section—extra-heavy steatite stator s port insulators—soldered .023" thick brass plates. M al parts heavily nickel-plated. Sturdy brass end fr nes—double bearing construction—silver-plated b llium copper wiping contacts. Peak voltage rating 12 volts. Specials available in production quantities.

TYPE "L"—Extreme stability and strength—rotor bearings and stator support rods soldered directly to heavy 3/16" steatite insulators. Split-sleeve bearing, silver-plated beryllium copper rotor contact for constant torque, smooth capacity variation. Plate spacing .030". Peak voltage rating 1500 volts. Single Section, Dual, Butterfly, and Differential types. Specials available in production quantities.

TYPES "C" AND "D"—Heavy .051" aluminum plates and 5/16" diameter aluminum tie rods; ¼" cadmium-plated steel shafts; laminated phosphor bronze rotor contact springs; and steatite insulation. Type "C"—overall width: 5½"—height: 5-13/32"—height bottom to shaft center: 3-3/32". Type "D"—overall width: 4¼"—height: 4"—height bottom to shaft center: 2-5/32". Dual types have center rotor connection for better balance. End frames tapped 8-32, 3 holes, for panel mounting—brackets furnished for chassis mounting.

TYPE "E" AND "F" CAPACITORS—Large amount of capacity per cubic inch and low capacity to chassis. Heavy aluminum plates .032" thick with rounded edges and large ¼" tie rods; stainless steel shafts; sturdy phosphor bronze rotor contact springs; and center rotor contact on dual types. End frames tapped 8-32, 3 holes for panel mounting—brackets furnished for chassis mounting.

MIAL polystyrene capacitors

that out-perform...cost less than other capacitor.

General purpose polystyrene capacitor style 611

- *Capacitance Range:* 20 to 100,000 pF
- *Temperature Coefficient:* N150 ±50 ppm/°C
- *Capacity Tolerance:* from ±1pF to ±20%
- *Voltage Range:* 33, 63, 160, 630 & 1000 VDCW
- *Q Factor:* Over 2,000 at 100 KC +25°C

The MIAL Style 611 general purpose polystyrene capacitor with a temperature coefficient: N150 ±50 ppm/°C has a better tolerance characteristic than Mica Class B, C or D. Ideally suited for TV, radio, stereo and instrumentation applications requiring long life, high reliability, and complete freedom from drift. All this, for a cost of only pennies per unit.

For Your Convenience

- Popular values are stocked in depth at Nutley, N. J. for same day shipment.

Miniature ceramic disc capacitors feature .240 max. diameter MIAL styles 501, 506, 511

A new series of low cost ceramic disc capacitors featuring a .240 max. diameter unit in each style in addition to standard .275 thru .690 diameter types.

Long or stub leads for printed circuits are available in all three styles.

STABILITY & QUALITY

High quality capacitors unrivalled in the precision, dependability and compactness. Quality is recognized by ever wider use in measurement equipment, computors, and automatic controllers. "LEAF" the matter of capacitors to MATSUO ELECTRIC CO.

SOLID TANTALUM CAPACITORS FOR HYBRID ICs -"MICROCAP"-

Specifications:
Operating Temperature Range: —55 +85°C
Standard Voltage Rating: 6.3, 10, 16, 20, 25, 35VDC.
Standard Capacitance Value: .001 to 22 MFD (E6 Series)
Standard Capacitance Tolerance: ±20% (M)
D. C. Leakage Current: After rated voltage applied for 5 minutes 1.0 micro ampere max., at 25°C.
Dissipation Factor: 10% max., at 25°C, 120 Hz.

METALLIZED POLYESTER FILM CAPACITOR -"TYPE FNX-H"-

Specifications:
Operating Temperature Range: —40°C to +85°C.
Standard Voltage Rating: 100V, 200V, 400V, 600V. D.C.
Standard Capacitance Value: 0.1 MFD to 10 MFD.
Standard Capacitance Tolerance: ±20% (M) ±10% (K)
Insulation Resistance: 9,000 MΩ or 3,000 MΩ • MFD min. at 20°C
900 MΩ or 300 MΩ • MFD min. at 85°C
Dissipation Factor: 1% max. (1KHz, at 20°C)

MATSUO'S other capacitors include:

POLYESTER FILM CAPACITORS

Type MFL epoxy dipped

Specifications:
Operating Temperature Range: —40°C to +85°C.
Standard Voltage Rating: 50V, 100V, 200V.D.C.
Standard Capacitance Value: .001 MFD to .22 MFD E-6 series.
Standard Capacitance Tolerance: ±20% (M), ±10% (K)

Type MFK epoxy dipped, non inductive

Specifications:
Operating Temperature Range: —30°C to +85°C
Standard Voltage Rating: 100V, 200V. D.C.
Standard Capacitance Value: .01 MFD to .47 MFD E-6 series.
Standard Capacitance Tolerance: ±20% (M), ±10% (K)

Type MXT encased in plastic tube, non-inductive

Specifications:
Operating Temperature Range: —40°C to +85°C.
Standard Voltage Rating: 100V, 200V, 400V, 600V. D.C.
Standard Capacitance Value: .001 MFD to .22 MFD E-6 series.
Standard Capacitance Tolerance: ±20% (M), ±10% (K)

SOLID TANTALUM CAPACITORS

Type TAX hermetically sealed in matallic case

Specifications:
Operating Temperature Range: —55°C to +85°C (125°C with derating voltage)
Standard Voltage Rating: 6.3, 10, 16, 20, 25, 35, 50VDC.
Standard Capacitance Value: 0.1 MFD to 220 MFD E-6 series.
Standard Capacitance Tolerance: ±20%(M), avail. ±10%(K)

Type TSX encased in metallic case and sealed with epoxy resin

Specifications:
Operating Temperature Range: —55°C to +85°C
Standard Voltage Rating: 6.3V, 10V, 16V, 20V, 25V, 35V. D.C.
Standard Capacitance Value: 0.22 to 330 MFD E-6 series.
Standard Capacitance Tolerance: ±20% (M), ±10% (K)

Type TSL encased in metallic case and sealed with epoxy resin

Specifications:
Operating Temperature Range: —55°C to +85°C
Standard Voltage Rating: 6.3V, 10V, 16V, 20V, 25V, 35V. D.C.
Standard Capacitance Value: 0.22 to 330 MFD E-6 series.
Standard Capacitance Tolerance: ±20% (M), ±10% (K)

"Designed for Application"® CAPACITORS

No. 25000 miniature, precision, high Q variable air dielectric capacitors with high reliability are machined from solid bars of extruded brass. Knob or screw-driver adjust from the front. Single hole mount, mount with two screws, or with tabs. 0.010″ air gap. 350V. 21 plate **25035** is 4.0 to 35.8pf. 0.750″ x 0.562″ x 23/32″L.

No. 20000 Ceramic end plate 1-3/16″ x 1-5/16″. Silver plated plates. 0.015″ air gap — 600V. peak or 0.045″ air gap — 1400V. peak.

20005 2.0-4.5pf. 600V. ¾″L—**20100** 5.2- 111pf. 600V. 1½″L

20904 2.5-3.8pf. 1400V. ⅞″L—**20935** 6.7-39.5pf. 1400V. 2⅛″L

No. 22000 Ceramic end plate 1-1/16″ x 1-7/16″. Single bearing or double bearing. Air gap 0.020″—800V. peak or 0.060″—2000V. peak.

22006 2.8- 7.5pf. 800V. 1⅛″L—**22200MK** 11-207pf. 800V. 2-9/16″

22910 4.1-12.5pf. 2000V. 1¼″L—**22950MK** 8.5-57.0pf. 2000V. 3″L

No. 23000 Ceramic end plate 1-7/16″ x 1½″. Single bearing or double bearing. Single or dual section. Balanced or inline rotor. Air gap 0.020″-800V. peak or 0.060″—2000V. peak.

23907MKY 3.5-7pf. 2000V. 1-9/16″L—**23140MK** 10-146.5pf. 800V. 2⅛″L

No. 26000 Ceramic end plate 15/16″ x 1-7/32″. Silver plated plates. 0.015″ air gap — 600V. peak or 0.045″ air gap — 1400V. peak.

26010 2.9-11pf. 600V. ⅞″L—**26100** 5.5-109pf. 600V. 1-9/16″L

26910 3.3-11pf. 1400V. 1⅛″L—**26935** 6.8-39.5pf. 1400V. 2-3/16″L

No. 28000 Straight line capacity or **No. 29000** straight line frequency. Double ceramic end plates 1-9/16″ x 1-11/16″. Double bearing. Single or double section. Balanced or inline rotor. Air gap 0.022″-850V. peak, 0.040″-1350V. peak or 0.066″—2250V. peak.

28227MKW 16-227pf. 1350V. 4-1/16″L—**29025KM** 3.9-23.3pf. 850V. 1-9/16L

No. 19000 Ceramic insulators. Cross section 1-9/16″ x 1-11/16″. Double bearing. Air gap 0.022″-850V. peak, 0.040″ — 1350 V. peak or 0.066″ — 2250V. peak. Single section. Tapped mounting brackets.

19335 14.7-339pf. 850 V. 2⅜″L—**19950** 11.6-60pf. 2250V. 2¼″L

No. 15000 NEUTRALIZING CAPACITORS. Parallel discs or concentric cylinders. **15011** Disc 3.5pf. at 0.4″ gap to 18pf. at 0.04″ gap.

15005 Cylindrical Capacitor — 3.5pf. to 16.2pf. — 4000V. peak.

15006 Cylindrical Capacitor — 3.2pf. to 9.7pf. — 6000V. peak.

No. 11000 TRANSMITTING CAPACITORS. 16/1 or 48/1 ratio centerdrive. Ceramic insulation. Air gap 0.077″-3000V. peak or 0.176″-6000V. peak. Polished aluminum plates 0.040″ thick. Dual section.

11035 5.3-34pf. 3000V. 5-7/16″L—**11090** 10-93pf. 3000V. 7⅜″L

No. 12000 TRANSMITTING CAPACITORS. Rigid, heavy channeled aluminum end plates. Ceramic insulation. Single or dual section. Air gap 0.077″-3000V. peak or 0.176″-6000V. peak. Polished aluminum plates 0.040″ thick. Unpolished plates available for 3000V. gap.

12536 9.7-28pf. 6000V. 4″L—**12515** 16-150pf. 3000V. 5¼″L

No. 04000 BALANCED TRANSMITTING CAPACITORS. 1/1 right angle gear drive. Adjustable drive angle for sloping panel. Sturdy cast aluminum frame. Ceramic insulation. Air gap 0.077″-3000V. peak, 0.171″-6000V. peak or 0.265″-9000V. peak. Polished plates.

No. 16000 TRANSMITTING CAPACITORS. Ceramic insulation. Air gap 0.077″-3000V. peak, 0.171″-6000V. peak or 0.265″-9000V. peak. Polished aluminum plates 0.050″ thick. Single or dual section.

16550 13-52pf. 6000V. 3⅜″L—**16530** 45-297pf. 6000V. 12½″L

16559 11-65pf. 9000V. 6¼″L—**16512** 40-128pf. 9000V. 11½″L

MONOLITHIC CERAMIC CHIP CAPACITORS • TYPE K • 1200

MDI offers a truly solid-state capacitor featuring monolithic construction which is inherently impervious to moisture and contamination — yet without space and cost consuming exterior encapsulation.

A new breakthrough in the state-of-the-art enables MDI to provide capacitance ranges previously unattainable in comparable sizes and characteristics.

GENERAL SPECIFICATIONS

Capacitance Range: 1.2 pF to 2.5 Mfd
Tolerance: ±20% std., ±10%, ±5% and GMV
Dissipation Factor: Less than 2% @ 1 kHz
Insulation Resistance: 1000 megohm-mfd or 100,000 megohms @ 25°C and VDCW (÷10 for 125°C)
Temperature Coefficient: ±15% max., −55°C to 125°C
Voltage-Temperature Coefficient: +15%, −25%, −55°C to 125°C
MIL Specifications: Meets applicable portions MIL-C-11015 and MIL-C-39014
Working Voltage: 25/50/100/200 VDC

Flash Test: 3 x VDCW below. 1 Mfd 2.5 x VDCW .1 Mfd and above (5 sec @ 25°C, 50 ma max.)

Life Test: 2 x VDCW @ 125°C, 1000 hrs

Electrodes: .015 min silver band-width standard; other noble metals available, except R11 band .005 min.

Inspection Sequence:
1. Capacitance
2. Dissipation Factor
3. Insulation Resistance
4. Flash Test

†Values Below 10pF Available in Size R11 Only.

Nytronics Capacitors

Film and Paper

TYPE 231 (Polystyrene Film — Extended Foil) — Designed for applications requiring high insulation resistance, low dissipation factor and minimal dielectric absorption. Hermetically sealed. Available in standard tolerance of ±1% to ±20%. Can be provided to special close tolerance of ±0.1%.

TYPE 107 (Mylar and Foil) — Designed for applications requiring a flat capacitance change with temperature from +15 to +65°C. Provides exceptional electrical properties in the range of −55° to +125°C. Dissipation factor at room temperature less than 0.6%.

TYPE 223 & 230 (Metalized Mylar and Metalized Paper/Mylar) — Self-healing property makes this hermetic unit suitable for the most stringent applications. Special capacitance tolerance of ±1% can be provided.

TYPE 207 (Paper/Polyester Film) — Hermetically Sealed — Temperature range: −65°C to +125°C. Available in 8 style variations. Made to meet Mil-C-19978 character K.

TYPE 216 (Polyester Film) Hermetically Sealed — Temperature range: −65°C to +125°C. Available in 8 style variations. Made to meet Mil-C-19978.

TYPE CPO SERIES (Paper & Foil) Approved to Mil-C-25. Hermetically Sealed. CP04, CP05, CP08, CP09, CP25 through CP29, CP40, CP41, CP53, CP54, CP55, CP63, CP65, CP67, CP69, CP70, CP91. Wide range of capacitances, voltages and circuits.

Tantalum

STYLE MCS (Mil Type CS12 and CS13) — Miniature solid electrolyte hermetically sealed capacitor. Available in non-polar construction. Capacitance range: .0047 to 330 μf.

STYLE CSR 13 — Established reliability capacitor, manufactured to exacting military standards. Solid electrolyte. Meets or exceeds the requirements of MIL-C-39003A. Capacitance range: .0047 to 330 μf. Failure rate level L, M, P & R.

STYLE TAK and TAK-H — (Mil Type CL64 and CL65) A sintered anode gelled electrolyte miniature capacitor, operates under extreme environmental conditions and wide temperature ranges. Capacitance range: 1.7 to 560 μf.

STYLE MTAK — Subminiature version of TAK series. Offers all the advantages of TAK in a smaller configuration. Capacitance range: 3.3 to 330 μf.

STYLE ACS — Solid electrolyte in metal can with epoxy end fill. Available in both standard MCS and subminiature cans. Axial leads. Capacitance range: .0047 to 330 μf.

Ceramic

TYPE EK — An epoxy molded monolithic ceramic capacitor designed to meet Mil-C-11015/20B. Capacitance range from 10 pf to 3.3 μf.

DECI-CAP — A subminiature monolithic capacitor with an epoxy molded envelope 0.100" diameter by 0.50" long. Designed to meet Mil-C-11015. Capacitance range 4.7 pf to 27,000 pf ±10%.

HY-CAP — Offers high capacitance range .01 mfd to 2.5 mfd ±20%. Voltage 100 WVDC, no derating to 125°C. Designed to meet Mil-C-11015.

Ultra High Stability

NYT-CAP — A high stability monolithic ceramic with a range of 4.7 pf to 4700 pf.: 4.7 pf to 220 pf case size 0.1" dia. x 0.250" long. 270 pf to 4700 pf, ±10%: 0.350" x 0.250" x 0.1".

NYT-CHIP — A high stability monolithic ceramic chip capacitor. Chip dimensions are as follows: 4.7 pf to 220 pf: 0.170" x 0.065" x 0.070". 270 pf to 4700 pf: 0.28" x 0.195" x 0.070".

rmc DISCAPS

NEW!!

Alumina Ceramics

RMC's expanded capabilities include the production of High Alumina substrates with a range of finishes suitable for both thick and thin film deposition. Flat plate and extruded rod shapes are available.

Low Voltage Subminiatures

For applications requiring components with higher capacitance values at lower voltages ratings, RMC lists:

TYPES CM, SM, BT, or TA

Temperature Compensating TYPE C or CG

Type C DISCAPS are designed for applications requiring a rating of 1000 volts D.C. Where a 500 volt D.C. rating is adequate. Type CG can be specified. Both types meet or exceed EIA specifications and are ideal for VHF or UHF applications.

High K-High Voltage

Maximum capacities combined with high voltage ratings are available in this line. Rated from 2000 to 6000 VDC in Z5F or Z5U temperature coefficients. Tolerances are ±10%, ±20%, +80-20% or GMV. **NEW! Additional ratings of 7½, 10 and 15 KV are now available for high voltage supply applications.**

THE STANDARD OF PERFORMANCE THROUGHOUT THE ENTIRE ELECTRONICS INDUSTRY

NEW!!

Piezoelectric Ceramics

RMC can now supply your requirements for a variety of Piezoelectric Devices. Radial mode resonators for filter applications and spark ignition devices are currently available.

T.C. High Voltage

These components are suited to high frequency, corona free applications. Available in working voltages from 2000 to 6000 VDC in temperature coefficients of N-750, N-1500 or N-2200.

High Dielectric Constant

The industry's broadest line of high dielectric constant ceramic disc capacitors in wide capacitance ranges, select working voltages and tolerances.

Featured are:

TYPES B, JL, JF, JE, JK, BA, JG, BG

Complete specifications listed in detailed RMC catalog.

Magnacaps

Designed for application in low voltage circuits, Magnacaps combine very high capacitances with small physical sizes. These components are available in 3, 12, 16 and 25 volt ratings in wide capacity ranges.

TYPES M3, M12, M16 and M25

Specials

Widest variety of special components for varied applications. Featured are Type U, U.L. approved parts for both "Live Bypass" and "Across-the-line" applications, TC Soldering, Sparkcaps, and Low Voltage "Chip" capacitors. For special requirements, contact RMC.

Standard Mallory components are available from authorized Mallory distributors throughout the United States.

THINLINE

Mucon's Thinline Capacitors are made of the following 16 different ceramic bodies for a broad choice of size and electrical properties:

Temperature-Compensating Materials:	NP0	N080	N150
	N220	N330	N450
	N750	N1400	N2400
	N3300	N4700	N5600

General Purpose Materials: LOW-VAR, STABLE-K, HIGH-K & SUPER-K for wide range of stability and capacitance.

SPECIFICATIONS

Capacitance:
Range: TEMP.-COMP. BODIES 1/2 pf - 2200 pf; GEN. PURPOSE BODIES 50 pf - 150,000 pf
Voltages: 25 WVDC, 50WVDC, 200 WVDC and 500 WVDC
Leads: Tinned Copper, Nickel or Dumet to MIL Spec.
Shapes: Square, rectangular, single or multiple element.

NARROW-CAPS®

NARROW-CAPS are designed for 1/10" modular spacing on printed circuits, or for cordwood applications.

SPECIFICATIONS

Capacitance:
Range: 5 pf - 100.000 pf
Voltages: 10 WVDC - 50 WVDC
Sizes: .095" max. wide x 1/4" max. long x .095" max. thick through 750 pf. Larger values 5/16" max. long.
Leads: #26 Tinned Copper, Nickel or Dumet to MIL Spec.

SLIM-CAPS®

Designed for applications which require capacitors slimmer than NARROW-CAPS. SLIM-CAPS are .065" wide x .065" thick max. Body lengths from .100"—.250" max.

SPECIFICATIONS

Capacitance
Range: 1/2 pf - 20,000 pf
Voltages: 50 WVDC
Leads: #30 Tinned Copper, Nickel or Dumet to MIL Spec.

STANDOFFS

Standoffs are furnished in the shapes shown above, using any one of the Mucon temperature-compensating bodies or general purpose bodies.

RIBBON LEADS

Style RLA

Size and specifications same as "Thinline" capacitors shown above, except radial and axial tinned copper ribbon leads, approximately .006" thick x 3/32" wide for units with max. size of .150" and up; .045" wide for smaller units.

CHIPS SINGLE LAYER

Sizes: .030" Sq. and up
Capacitance: SUPER-K Ceramic 150 PF. to 10,00 PF
HIGH-K " 100 PF. to 5,00 PF
STABLE-K " 50 PF. to 2,70 PF
LOW-VAR " 20 PF. to 1,00 PF
TEMP. COMP. " 1 PF. to 33 PF
Electrodes: Normally silver. Other precious metals on request
Voltage: 50 WVDC

CHIPS MONOLITHIC MULTILAYE

Sizes: From .050" x .050" x .050" to .610" x .310" x .080"
Capacitance: STABLE-K Ceramic 10 PF. to 2 MF.
NPO " 1 PF. to .027 MF.
Electrodes: Normally silver. Other precious metals on request
Voltage: 50 WVDC

17 SERIES — METALIZED MYLAR

For circuits that require the ultimate electrical properties Non Polar coupled with the smallest size over a wide temp. range.

- IR: 50K Meg × MFD Min. +25° C
- DF Less Than 1% IKHZ at +25°C
- Dielectric Strength: 200% of rated VDC 1 Min. Max.
- Temperature Range: −55° C to +125° C
- Voltage versus Temp.: 100% rated Voltage to 100° C 50% derating to +125° C
- Capacity versus Temp.: −55° C to +25° C, +5% change; +25° C to +85° C, +3%, and +25° C to +105° C, +7% change
- Quality Control and Production Tests consist of 100% group A requirements of MIL C 18312 on hermetic seal style E and all tests except for moisture leak tests on styles W-U-R-N-B-D.

22 SERIES — METALIZED POLYCARBONATE

For circuits that require flat T.C., low losses, small size over a wide temperature and frequency range. Used in many wave filter, discriminator and critical timing circuits.

- IR: 100K Meg × MFD Min. at +25 C
- DF less than .3% measured IKHZ at 25 C
- Dielectric Strength: Up to 200% of rated VDC Max. 1 Min.
- Temperature Range: −55° C to +105 C. When properly encased will operate to +125° C
- Temperature Coefficient: From −55 C to +25° C, 1.5% max change; +25° C to +105° C, −.7% max. change.
- QC & Production Tests consist of 100% to group A requirements MIL C 18312 on hermetic seal style E and to all except moisture leak test on styles W-U-R-N-B-D.

13 SERIES — POLYSTYRENE

For the instruments that require long term stability, low leakage, minimum dielectric absorption.

Used in many critical computer timing and hybrid circuits.

- Temperature Range: −55 C to +85 C
- IR: 100K Meg × MFD Min +25 C
- DF: .05% Max IKHZ at +25 C
- TC: 130 PPM / C +20 PPM
- Quality and Production test consists of 100% to group A level of MIL C 19978 on style E and all requirements except moisture leak test on style R.

ORDERING AND PART NUMBER INFORMATION

The dimensional tolerances for case styles R-W-U-D are ±.05. Styles G-B-N-E are ±.031, on length, and ±.015 for other dimensions. All units are available in any value, ranging from .001 MFD to their maximum capacity, with tolerances to ±1%. Standard tolerance is ±20%. Other types of leads, configurations, and encasements are available upon request to meet your special requirements.

SOSHIN DIPPED MICA CAPACITORS

PROOF OF RELIABILITY--2000hrs at 40°C
Usable Temperature Range-55°C to 150°C

Soshin Dipped Mica Capacitors are the only mica capacitors made in Japan passing evaluation testing by the Japanese Government equivalent to MIL-C-5D. They give the advantages of natural mica characteristics and a revolutionary coating process. From DM-42 to miniature DM-05, Soshin capacitors are reliability proven.

Soshin Dipped Mica Capacitors are dipped in a phenolic compound and case materials are vacuum impregnated with epoxsy resin. Until now, dipped mica capacitors suffered from low resistance to humidity resulting from the poor bond between the metal and resin. Now, since Soshin capacitors are specially treated, 100% resistance to temperature and humidity is possible, and because of uniform hardening, resistance is guaranteed. The special resin used has increased temperature limits from the normal −30°C to +85°C—to a guaranteed −55°C to +150°C.

Ceramic Capacitors

Southern Electronics ceramic capacitors consist of alternate layers of high permittivity ceramic and noble metal electrodes fired together to form a monolithic structure. Unique processing techniques permit the volume production of extremely thin sections of ceramic. These thin sections together with the external parallel connection of the individual sections increase the volumetric efficiency of these devices by a factor of approximately 100 compared to conventional "single-sheet" ceramic structures.

Performance Data

PO (COG) Ceramic SEC's NPO Ceramic Formulation is a highly stable non-ferroelec-tr composition which exhibits high Q, I.R. and negligible changes in capacitance over a wide ra ge of temperatures, frequencies and bias voltages. Ideally suited for tuned circuits, timing c uits, and fast rise time applications.

TYPICAL
CAPACITANCE AGING
% ΔC VS TIME

K1200 (W5P) Ceramic SEC's K1200 material is a ferroelectric dielectric system with a K of approximately 1200 at 25°C. It offers the advantage of approximately 40 times the volu-metric efficiency of the NPO material, and exhibits moderate changes in capacitance and D.F. with temperature, frequency and bias voltages. Suited for by-pass, coupling, filtering and general circuitry.

"Chip" Capacitors

The SEC Chip capacitor is a space-age component. Much like semiconductor chip devices, ne chip capacitor can be attached to substrates, headers or printed circuit boards. They provide x tremely high values of lumped capacitance per unit area compared with evaporated or thick m devices, since they are made up of many layers (over 45 in some cases) of high-K ceramics o the barium titanate family. The standard silver terminations permit attachment by solder refl w Special terminations (such as gold, palladium or nickel) are available to meet specific metallurgi cal criteria. Since all electrode edges are completely sealed during the high temperature firing operation, these devices are hermetically sealed. The following tables indicate the SEC standard line of silver terminated chip capacitors in NPO and K1200 ceramic formulations with 25, 50, 1 0, and 200 volt ratings. Many other sizes, end terminations, capacitance values, ceramic formu tions and voltage ratings are available on special order. Our Engineering Department invites your inquiries.

NPO "Chip" Capacitors

RT NUMBER CODE:

SE 805 CN 101 K A (*)

Style
NPO ramic
Capa ance
Tole ce
Volta
Opti l Electrode Material

Standard Termination, Silver

Optional:
G = Gold
P = Palladium Gold
T = Tinned Silver
N = Nickel

Specifications:

Temperature range: —55°C to +150°C
Test frequency: 100 pf and less —1 MHz, over 100 pf —1 KHz
Temperature coefficient: 0±30 ppm/°C (EIA char. COG)
Dissipation factor: 0.15% max
Insulation resistance: 100 K megohms or 1000 ohm-farads, whichever is less @ 25°C
Test Voltage: 2.5 x rated WVDC (min.)

CAPACITANCE CODE

TOLERANCE CODE	CAPACITANCE CODE EXAMPLE
C = ±.25% D = ± .5% F = ± 1% G = ± 2% J = ± 5% K = ± 10% M = ± 20% Note: Minimum Tolerance ±.5 pf	below 10 pf: 1R2 = 1.2pf "R" signifies decimal point. 10 pf and above: 101 = 100 pf 1st two digits are significant factors & 3rd digit signifies number of zeroes.

Radial Lead "Dipped" Capacitors

e SEC epoxy dipped series — the space saver for the designer — offers high volumetric effi-ency along with the excellent characteristics of SEC's Monolithic concept. This series is avail-le in both high-K and high-Q dielectrics. Refer to table for capacitance and physical size.

Specifications

NPO (COG)

Temperature range: −55°C to +150°C
Test frequency: 100 pf and less — 1 MHz, over 100 pf — 1 KHz
Temperature coefficient: 0±30 ppm/°C (EIA char. COG)
Dissipation factor: 0.15% max.
Insulation resistance: 100 K megohms or 1000 ohm-farads, whichever is less, @ 25°C
Test Voltage: 2.5 x rated WVDC (min.)

K1200 (W5P)

Temperature range: −55°C to +125°C
Temperature characteristics: W5P (±10%)
Dissipation factor: 1.5% max. @ 1 KHz, 25°C
Insulation resistance: 100 K megohms or 1000 ohm-farads, whichever is less, @ 25°C
Test Voltage: 2.5 x rated WVDC (min.)

Radial Lead Capacitors

SEC radial lead capacitors are favored by design engineers using printed circuit boards substrates. Lead spacings are all on the 0.1" grid system. High temperature solder is used the attachment of the leads to the ceramic element inside the capacitor, to avoid internal reflo Transfer molding is standard for the smaller sizes listed while the larger units are encapsulate in precision molded epoxy shells by potting.

Radial Lead NPO (COG) Capacitors

PART NUMBER CODE:

SEC 04 CN 101 K A (*)

- Style — SEC 04
- NPO Ceramic — CN
- Capacitance — 101
- Tolerance — K
- Voltage — A
- Optional Lead Material — (*)

Specifications:

Temperature range: −55°C to +150°C
Test frequency: 100 pf and less —1 MHz, over 100 pf —1 KHz
Temperature coefficient: 0±30 ppm/°C (EIA char. COG)
Dissipation factor: 0.15% max
Insulation resistance: 100 K megohms or 1000 ohm-farads, whichever is less @ 25°C
Test Voltage: 2.5 x rated WVDC (min.)

CAPACITANCE CODE

TOLERANCE CODE	CAPACITANCE CODE EXAMPLE
C = ±.25%	below 10 pf: 1R2 = 1.2p
D = ± .5%	"R" signifies decimal point.
F = ± 1%	10 pf and above
G = ± 2%	101 = 100 pf
J = ± 5%	1st two digits ar significant factors
K = ± 10%	3rd digit signifie number of zeroes
M = ± 20%	
Note: Minimum Tolerance ±.5 pf	

TYPE SEC 05

.025 Dia (Tinned Copperweld)
Optional: D = Gold Plated Dumet
N = Gold Plated Nickel
T = Tinned Nickel

Axial Lead Capacitors

SEC axial lead capacitors utilize the basic SEC chip as the capacitive element. Headed leads ar soldered directly to the chip with high-temperature solder. The subassembly is meticulousl cleaned and encapsulated in epoxy. Transfer molding is standard for the smaller sizes listec while the larger units are encapsulated in precision molded epoxy shells by potting. Potting an molding compounds are carefully selected for optimization of moisture and environmental pro tection properties. The following tables of standard SEC axial leaded capacitors are complement ed by a broad spectrum of custom units designed to meet specific applications. Other voltages lead materials and sizes are available on request.

Axial Lead Tubular NPO (COG) Capacitors

PART NUMBER CODE:

SEC 50 CN 101 K A (*)

- Style
- NPO Ceramic
- Capacitance
- Tolerance
- Voltage
- Optional Lead Material

Specifications:

Temperature range: —55°C to +150°C
Test frequency: 100 pf and less —1 MHz, over 100 pf —1 KHz
Temperature coefficient: 0±30 ppm/°C (EIA char. COG)
Dissipation factor: 0.15% max
Insulation resistance: 100 K megohms or 1000 ohm-farads, whichever is less @ 25°C
Test Voltage: 2.5 x rated WVDC (min.)

CAPACITANCE CODE

TOLERANCE CODE	CAPACITANCE CODE EXAMPLE
C = ±.25% D = ± .5% F = ± 1% G = ± 2% J = ± 5% K = ± 10% M = ± 20% Note: Minimum Tolerance ±.5 pf	below 10 pf: 1R2 = 1.2pf "R" signifies decimal point. 10 pf and above: 101 = 100 pf 1st two digits are significant factors & 3rd digit signifies number of zeroes.

SPRAGUE®

THE MARK OF RELIABILITY

Representative types of SYNCRO electrolytic capacitors

type ME

Metal Cased Twist Prong
Type ME is a metal cased electrolytic with an operating temperature range of —20° C. to +85° C. It is of all welded construction and features twist type mounting and solder lug terminals. It can be furnished with printed circuit terminals and also keller wire-wrap terminals.
Case diameter: 1″ and 1⅜″.
Length: up to 5⅜″.

type EMF

Solder Terminals—Riveted
Type EMF is a metal cased electrolytic with an operating temperature range of —20° C. to +85° C.

type MEL

Wax-Sealed Metal
Type MEL is a metal cased, wax-end sealed unit with flexible plastic insulated leads. The metal case shield with twist mounting is isolated.
Case diameter: 1″, 1³⁄₁₆″, 1⅜″.
Length: up to 5⅜″.

type EM

Riveted Terminals—Sleeve
Type EM is a metal cased electrolytic with an operating temperature range of —20° C. to +85° C. Riveted, bare leads are standard.

type EP

Wax-Impregnated Cardboard
Type EP is a wax-impregnated cardboard tube electrolytic with an operating temperature range of —20° C. to +75° C. Optional in single, dual, triple, quadruple and quintuple sections.

type EMW

Welded Leads
Type EMW is an all-welded metal cased tubular electrolytic with an operating temperature range of —40° C. to +85° C. Excellent for transistorized applications.
Case diameter: ⁵⁄₁₆″, ⅜″, ½″, ⅝″, ¾″, ⅞″, 1″, 1⅜″.
Length: From ⅝″ to 4⅛″.

type EMC

Computer Type
Type EMC is a metal cased electrolytic with an operating temperature range of —20° C. to +85° C. It is of all-welded construction with a molded top and screw insert terminals.
Case diameter: 1⅜″, 1¾″, 2″, 2½″, 3″.
Length: up to 5⅝″.

type EMMW

Sub-Miniature of EMW
Type EMMW is a metal cased sub-miniature electrolytic with an operating temperature range of —40° C. to +85° C. Similar in design to EMW, the EMMW is available in ³⁄₁₆″ and ¼″ diameter.

TEX-CAP® SERIES TWENTY MYLAR* AND FOIL

GENERAL SPECIFICATIONS

Temperature Range — −55°C to +85°C at rated voltage; to 125°C with 50% derating.

Insulation Resistance — Will equal or exceed 50,000 megohm-microfarads at 25°C, but the IR need not exceed 150,000 megohms.

Dielectric Strength — Will withstand the application of 150% rated voltage at 25°C for 60 seconds through a limiting resistance of 100 ohms/volt.

Dissipation Factor — Will not exceed 1.0% at 1000 ±20 cps at 25°C.

Life Test — Will withstand 125% of rated voltage at 85°C for 2[illegible] hours.

Winding Design — Non-inductive, extended foil.

Capacitance Tolerance — Standard tolerance, ±5%; also availa[illegible] in ±10%, ±3%, ±2% and ±1%.

		Capacitance Range	Voltage Range	Size
 TYPE 23 Round Hermetically Sealed Metal Case	Type 23 is designed for applications where the most stringent environmental conditions will be encountered. The Mylar*-and-foil winding is housed in a hermetically sealed metal case with glass end seals. The extremely high insulation resistance inherent in Mylar provides maximum voltage/capacitance ratings with minimum capacitor size.	.001 MFD thru 2.0 MFD	200 VDC, 400 VDC and 600 VDC	.193 D. x 3/16" thru 1.375 D. x 2⅝"
 TYPE 24 Round Mylar* Tape-Wrapped	Type 24 consists of a Mylar*-and-foil winding wrapped with Mylar tape and end-filled with epoxy. This type encapsulation provides a reliable, smaller sized capacitor without reduction of voltage rating or insulation resistance. The Type 24 is an excellent economy capacitor designed for commercial use.	.001 MFD thru 2.0 MFD	200 VDC, 400 VDC and 600 VDC	.156 D. x ½" thru 1.400 D. x 1½"
TYPE 25 Round Epoxy-Encased	The Type 25 Mylar*-and-foil capacitor features a rugged skin-tight epoxy resin encasement. This design permits extremely small size combined with physical strength far exceeding metal and glass encasement.	.001 MFD thru 2.0 MFD	200 VDC, 400 VDC and 600 VDC	.175 D. x 11/16" [illegible] thru 1.400 D. x 1½"
TYPE 27PE Printed-End Molded Epoxy Case	Type 27PE is an instrument-quality capacitor consisting of a Mylar*-and-foil winding enclosed within a molded epoxy resin case with printed end. This design permits wide variations in altitude and ambient pressure with little or no change in capacitance. The molded case is perfectly round and free of mold marks.	.001 MFD thru 2.0 MFD	200 VDC, 400 VDC and 600 VDC	.250 D. x ¾" L thru 1.500 D. x 1½"

TEX-CAP® SERIES THIRTY METALIZED MYLAR*

GENERAL SPECIFICATIONS

Temperature Range — −55°C to +85°C at rated voltage; to 125°C with 50% derating.

Insulation Resistance — Will equal or exceed 15,000 megohm-microfarads at 25°C, but the IR need not exceed 60,000 megohms.

Dielectric Strength† — Will withstand the application of 150% rated voltage at 25°C for 60 seconds through a limiting resistance of 100 ohms/volt.

†Except Types 315 and 315F.

Dissipation Factor — Will not exceed 1.0% at 1000 ±20 cps and 25°C.

Life Test — Will withstand 125% of rated voltage at 85°C for 250 hours.

Winding Design — Non-inductive.

Capacitance Tolerance — Standard tolerance, ±5%; also available in ±10%, ±3% and ±2%.

		Capacitance Range	Voltage Range	Size
 TYPES 31 & 31F Epoxy-Encased (Round & Oval)	The subminiature Types 31 and 31F contain a winding of metalized Mylar* enclosed in a thin epoxy-dipped case. The thin covering, combined with the metalized-Mylar winding, provides a capacitor of smaller physical size with high moisture resistance, plus the "self-healing without carbonization" feature. This type of capacitor has excellent stability and life rating. Type 31 comes in a round case. Type 31F is oval-shaped.	.01 MFD thru 12.0 MFD	200 VDC, 400 VDC and 600 VDC	Type 31 .200 D. x 5/16" L. thru 1.250 D. x 2¼" Type 31F .225 W. x .125 T. x 3/16" thru 1.450 W. x .875 T. x 2¼"
TYPE 34 Round Mylar* Tape-Wrapped	Tex-Cap Type 34 consists of a metalized-Mylar winding wrapped with Mylar tape and end-filled with epoxy. This type of encapsulation provides a reliable smaller sized capacitor without reduction of voltage rating or insulation resistance. The Type 34 is an excellent economy capacitor designed for commercial use.	.01 MFD thru 12.0 MFD	200 VDC, 400 VDC and 600 VDC	.200 D. x 5/16" L. thru 1.250 D. x 2¼" L.
TYPES 35 & 35PE Molded Epoxy Case (Axial & Printed-End)	Tex-Cap Types 35 and 35PE metalized-Mylar* capacitors are enclosed in a molded epoxy-resin case. This molded case, perfectly round and free of mold marks, provides rigidity plus the ability to withstand wide variations in altitude and ambient pressures with little or no change in capacitance. The metalized-Mylar winding facilitates smaller size and self-healing without carbonization. Type 35 has axial leads, whereas Type 35PE is of printed-end construction.	.01 MFD thru 10.0 MFD	200 VDC, 400 VDC and 600 VDC	.250 D. x 5/16" L. thru 1.000 D. x 2¼" L.
 TYPE 36 Rectangular Epoxy-Encased	Tex-Cap Type 36 metalized-Mylar* film capacitors are enclosed in a premolded rectangular epoxy case. These units have a good capacity-versus-volume factor along with good dimensional uniformity. Voltage ratings for Type 36 are 50-100, 200, 400 and 600 vdc.	.01 MFD thru 8.0 MFD	50-100 VDC, 200 VDC, 400 VDC and 600 VDC	.29 W. x .17 T. x .57" L thru .72 W. x .56 T. x 1.92" L
TYPES 315 & 315F Epoxy-Encased (Round & Oval)	Tex-Cap Types 315 and 315F capacitors are designed especially for transistor and other low-voltage subminiature applications. The ultra-thin metalized-Mylar* winding, encased in a thin epoxy-dipped case, is rated at 50 or 100 vdc. The thermo-setting epoxy end-fill seals out moisture, assuring a long, dependable life. Type 315 is tubular-shaped. Oval-shaped Type 315F is available for maximum space economy.	.01 MFD thru 20.0 MFD	50 VDC and 100 VDC	Type 315 .150 D. x ½" L. thru 1.200 D. x 1¼" L. Type 315F .250 W. x .190 T. x ½" L thru 1.100 W. x .850 T. x 1¼"

TEX-CAP® SERIES FORTY TEFLON* AND FOIL

GENERAL SPECIFICATIONS

Insulation Resistance—Will equal or exceed 100,000 megohm-microfarads at +25°C, but the IR need not exceed 1,000,000 megohms.

Dissipation Factor—Will not exceed 0.1% at 1000 ±20 cps and 25°C.

Dielectric Strength—Will withstand the application of 200% rated voltage at +25°C for 60 seconds through a limiting resistance of 100 ohms/volt.

Voltage Range—200, 400 and 600 volts DC.

Capacitance Tolerance—Standard tolerance, ±5%; also available in ±10%, ±3%, ±2% and ±1%.

Winding Design—Non-inductive, extended foil.

Temperature Range—

Type 43 and Type 200GGS—−55°C at rated voltage without derating

Type 45—−55°C to +165°C at rated voltage; to 200°C with 33% derating.

		Capacitance Range	Voltage Range	Size
TYPE 43 Round Hermetically Sealed Metal Case	Type 43 is a Teflon*-and-foil capacitor housed in a hermetically sealed metal case with glass end seals. The use of Teflon dielectric permits excellent performance at temperatures up to 200°C without derating. This type is designed primarily for equipment where extra reliability is required in extreme temperatures. Leads are attached with solder that will not soften at temperatures well over 250°C.	.001 MFD thru 1.50 MFD	200 VDC, 400 VDC and 600 VDC	.235 D. x 7/8" L. thru 1.375 D. x 2" L.
TYPE 45 Round Hi-Temp Epoxy Case	The Type 45 Teflon*-and-foil capacitor is encased in molded heat-resistant epoxy resin. The use of Teflon dielectric permits excellent performance without derating at temperatures up to 165°C. Extended foil construction, with leads securely attached to each turn of foil, insures a non-inductive "straight through" path for alternating current.	.001 MFD thru .82 MFD	200 VDC, 400 VDC and 600 VDC	.250 D. x 3/4" L. thru 1.000 D. x 2" L.
TYPE 200GGS	The Tex-Cap Type-200GGS is a TFE-Fluorocarbon (Teflon) Dielectric Film Capacitor, housed in a nickel plated tubular non-ferrous metal case with compression glass end seals.	.001 MFD thru .68 MFD	200 VDC, 400 VDC and 600 VDC	.235 D. x 23/32" L. thru 1.00 D. x 2 5/16" L.

TEX-CAP® SERIES SEVENTY METALIZED POLYCARBONATE

GENERAL SPECIFICATIONS

Temperature Range—−55°C to +125°C with full rated voltage.

Insulation Resistance—Will equal or exceed 50,000 megohm-microfards at 25°C, but the IR need not exceed 250,000 megohms.

Dielectric Strength—Will withstand the application of 150% rated voltage at 25°C for 60 seconds through a limiting resistance of 100 ohms/volt.

Winding Design—Non-inductive.

Dissipation Factor—Will not exceed 0.5%, or 1.0% for units greater than 10.0 mfd., at 1000 ±20 cps and 25°C.

Life Test—Will withstand 140% of rated voltage at 125°C for 250 hours.

Capacitance Tolerance—Standard tolerance, ±5%.

Vibration—Will meet or exceed the requirements of MIL-STD-202B, Method 204A.

		Capacitance Range	Voltage Range	Size
 TYPES 71 & 71F Epoxy Encased (Round & Oval)	Tex-Cap Types 71 and 71F metalized polycarbonate capacitors are enclosed in a thin, skin-tight epoxy-dipped case. They combine rugged design, low dielectric absorption, low dissipation factor, high insulation resistance and high dielectric strength, along with a higher stability than was available previously. Type 71 comes in a round case. Type 71F is oval-shaped.	.001 MFD thru 10.0 MFD	50 VDC, 100 VDC, 200 VDC, 400 VDC and 600 VDC	Type 71 .175 D. x 3/16" L. thru 1.400 D. x 2" L. Type 71F .22 W. x .12 T. x 3/16" L. thru 1.67 W. x 1.06 T. x 2" L.
 TYPE 73 Round Hermetically Sealed Metal Case	Type 73 is a metalized polycarbonate capacitor housed in a hermetically sealed metal tube with glass end seals. This provides the ultimate in moisture resistance characteristics for this type of dielectric. Type 73 is recommended in circuit applications where there is limited space and electrical characteristics must approach that of polystyrene or Teflon capacitors.	.001 MFD thru 10.0 MFD	50 VDC, 100 VDC, 200 VDC, 400 VDC and 600 VDC	.235 D. x 5/8" L. thru 1.000 D. x 2 1/16" L.
 TYPES 74 & 74F Mylar* Tape-Wrapped (Round & Oval)	Tex-Cap Types 74 and 74F metalized polycarbonate capacitors are encased in a jacket of high-temperature film with the ends epoxy-sealed. This provides moisture resistance exceeding most military specifications for non-hermetically sealed units. The size factor is decreased 35% over polycarbonate-and-foil units. Type 74 comes in a round case. Type 74F is oval-shaped.	.001 MFD thru 10.0 MFD	50 VDC, 100 VDC, 200 VDC, 400 VDC and 600 VDC	Type 74 .156 D. x 3/16" L. thru 1.380 D. x 2.0" L. Type 74F .21 W. x .10 T. x 3/16" L. thru 1.66 W. x 1.04 T. x 2" L.
TYPE 75 Round Molded Epoxy Case	Type 75 is a metalized polycarbonate capacitor encased in a pre-molded round epoxy case. This rugged encasement provides rigidity plus the ability to withstand wide variations in altitude and ambient pressure changes. Type 75, therefore, is well suited for airborne applications.	.001 MFD thru 10.0 MFD	50 VDC, 100 VDC, 200 VDC, 400 VDC and 600 VDC	.250 D. x 3/16" L. thru 1.000 D. x 2" L.
TYPE 76 Rectangular Molded Epoxy Case	Tex-Cap Type 76 is a metalized polycarbonate capacitor encased in a pre-molded rectangular epoxy case. This encasement provides maximum packaging density along with rugged construction which exceeds most military specifications and humidity requirements.	.01 MFD thru 5.0 MFD	50 VDC, 100 VDC, 200 VDC, 400 VDC and 600 VDC	.29 W. x .17 T. x .57" L. thru .72 W. x .56 T. x 1.92" L.

TANTALUM CAPACITORS?

Your choice is practically unlimited at TANSITOR

Over 3000 Different Sizes and Types Available

TANSITOR ELECTRONICS specializes in tantalum capacitors, has a broad line of standard foil, wire or sintered anode units which meet most circuit or MIL-spec. requirements. If your volume warrants, we are happy to develop special units too.

We have a reputation for dependable deliveries and high reliability standards and have tripled our laboratory and production facilities to keep pace with customer demands.

FOR MIL-SPEC OR PROTOTYPE tantalum capacitors, our specialized knowledge and ample facilities should be helpful.

HIGH-VOLTAGE FAST-DISCHARGE CAPACITORS

Developed in response to customers' inquiries, these capacitors meet exacting requirements in energy discharge applications.

PULSE LASER CAPACITOR
(Pat Pending)

Model ESC-302: 0.01μf, 20kv, 3 nanohenries; life: 10^8 shots at a repetition of 100 pps. Size: 4½″ dia x 3″ high.

LOW INDUCTANCE CAPACITOR & DISCHARGE SWITCH
(U.S. Patent 3 343 051)

Model ESC-248A: 3 kilojoule, 20kv, 5 nh, with Model SBG-5 discharge switch and trigger assembly. Size: 14″ x 7″ x 31″ high overall.

COAXIAL-DISC CAPACITOR
(U.S. Patent 3 346 790)

Model ESC-328A: 0.1μf, 20kv, 1 nh.

A new version of our patented coaxial-disc capacitor — it is expressly designed to facilitate assembly of low inductance capacitor stacks to operate at the megavolt levels required in EMP research. Photo shows 2 capacitors slightly offset. A single capacitor measures 11¼″ dia x 0.437″ thick. Units available to 50kv.

PULSE-FORMING NETWORKS

...from the smallest to the largest

Model PCE-1: Pulse-forming network installed at Griffis AFB. Peak charge voltage: 252kv; peak power: 180 megawatts; PRF: 180 pps; ripple: less than 1%.

TOBE DEUTSCHMANN pulse-forming networks range from miniature units to high-power installations like the one shown above. This unit, designed and built to a rigid performance specification, is more than 8 feet high, 5 feet wide, and 22 feet long.

Whatever your requirements for PFN's, low-Z pulse lines, or pulse capacitors, we can design and build reliable units to satisfy your need.

MICA-PAPER PLASTIC FILM CAPACITORS

rated for high-voltage pulse & dc applications feature:

- High Reliability.
- Encapsulated Construction.
- Extremely Low Dissipation Factor.
- Close Tolerance Matching Between Sections.
- Compact Size.

Size 4½″ x 2 9/16″ x 2¼″ high.

Developed for airborne radar modulators, TDL mica-paper capacitors are available as multiple section E-line pulse networks with internal or external coil. Prototype quantities to your specifications can be supplied on short delivery.

Model PRN-368: Five-section pulse capacitor; capacitance per section: 0.0225μF; difference between adjacent sections: less than 450pf; life: 10,000 hrs min at 65C; PRF: 200pps at 4100 volts; pulse width: 5.7 μ sec.

NEED A COMPLETE DISCHARGE SYSTEM?

Tobe Deutschmann builds units from table-top to megajoule installations with fast rise times and high peak currents. In addition to catalog models custom work is our specialty.

Tell us about your application.

Our units have proved their reliability worldwide in both research and industrial installations. For high voltage capacitors, discharge switches, pulse networks, pulse capacitors, and RFI filters, write or call...

KEMET® SOLID TANTALUM CAPACITORS

- Complete Line for all Industrial, Military, and Commercial Applications
- Available to Mil-C-39003A (Styles CSR13 & CSR09)
- National Sales & Distribution Network

KEMET J-Series

KEMET Micron Series

Series	Description & Features	Capacitance & Voltage Range	Size Range (Inches)	Leads	Reque Catalo
C	Molded epoxy, polar, self insulating. Ideal for commercial and industrial applications which do not require performance standards of hermetically sealed capacitors. Precision dimensions suitable for automatic insertion equipment. Bullet shaped for positive polarity identification.	.1–220 μF 6–50 VDC	4-case sizes .138 x .390 to .365 x .875	Axial	F-2622
D	Extended range molded sub miniature sizes featuring extremely high capacitance-to-volume ratio. Dimensions and tight lead wire-to-body concentricity permit automatic insertion by same equipment used for diodes and resistors. Suitable for decoupling, blocking,by-passing and filtering applications.	.0047–68 μF 6–50 VDC	3-case sizes .100 x .290 to .190 x .530	Axial	F-2632
E	Dip coated plastic encapulation providing the widely recognized shelf and operational life performance characteristics inherent in solid tantalum capacitors at prices competitive with conventional electrolytics. The dipped plastic case provides a tough barrier coating against moisture and shock and maintains precision lead spacing.	.1–330 μF 6–50 VDC	4-case sizes .175 x .350 to .400 x .750	Radial	F-2638C
J	Popular military hermetic sealed A, B, C & D case solid tantalum capacitors conforming to all requirements of Mil-C-39003A. Designed for miniaturized circuitry, they exhibit excellent stability, long life, extremely low DC leakage and D.F. over a wide temperature and frequency range.	.0047–330 μF 6–125 VDC	4-case sizes .125 x .250 to .341 x .750	Axial	F-1851D
MICRON	A complete line of microminiature capacitors designed for use in high density military, industrial and consumer circuits. Combines space saving advantages of .003 Mil MYLAR cases and KEMET's reliability engineering to achieve outstanding performance. Available in a wide variety of case styles, sizes and lead configurations.	.0047—220 μF 2—100 VDC	29-case sizes .125 x .070 x .040 to .475 x .374 x .150	Axial & Radial	F-2710B

KEMET® PARYLENE FILM CAPACITORS

- Ultra stable — available to 0±50 PPM/°C
- Capacitance tolerance to ½%
- Compliance with Mil-C-55514
- Small size
- Radial and axial leads
- Capacitance range of .001 to 1.0μF

Ideal for filters, timing, tuning, differentiating and integrating circuits, band pass and band elimination.

Series	Description	Case Size	Capacitance μF 50VDC	Case Size (radial) Height	Length	Thickness	Reques Catalo
Flat Kap	The outstanding characteristics of these capacitors are obtained by utilizing the unique properties of Parylene, an ultra-thin dielectric film developed by Union Carbide Corporation in combination with specially developed thermosetting resin impregnants to provide stability and predictable temperature characteristics in a compact size. This design provides three different temperature coefficient characteristics for precision matching of the coefficient of other components where predictable drift is essential to the stability of the circuit. KEMET Flat Kaps are available in standard and nonstandard values in tolerances to ±½%. Closer tolerances and/or special capacitors in matched groups are available on special order. TANTALUM CHIP CAPACITORS

Se	Description	Case Size	Dimensions (Max.) Width	Length	Height	Capacitance & Voltage	Request Catalog
T4	Designed for use in hybrid circuit and P.C. board applications using solder reflow bonding techniques. All tantalum chips feature a special copper coating that permits assembly temperatures to 300°C and operating temperatures to 175°C when derated linearly. The anode connection consists of a solder coated nickel tab. Cathode connection is made to the solder coating surrounding the body of the chip. Other chip capacitors offering microminiature sizes and additional flexibility in bonding techniques are also available.	A	.150	.210	.070	0.10 - 6.8μF 4 - 50 VDC	F-2715C

Miniature Ceramic Capacitors

USCC

USCC specializes in the production of ceramic capacitors utilizing uniquely developed packaging concepts. Since USCC first started making ceramic capacitors in 1961, a great many changes have taken place in ceramic capacitor technology. The important role played by USCC engineering for many of these changes has been well recognized. USCC continues to innovate ideas in technical ceramics to bring forth new generations of products that greatly enhance the designers versatility. As new products are introduced or d sign improvements made to existing USCC ceramic capa tors, supplemental technical bulletins are prepared augment catalogs. You can be assured of receiving th up-to-date information by requesting your name and a dress be placed on our mailing list. Just contact us dire or any of our representatives listed in the yellow sectio

Miniature Ceramic Capacitors

USCC

GENERAL SPECIFICATIONS:

W DIELECTRIC CHARACTERISTICS:

Dissipation Factor:	Less than 2.5% at 1kHz
Insulation Resistance:	100,000 megohms or 1000 megohm-Mfd at 25°C, whichever is less
Temperature Coefficient:	±15%, —55°C to +125°C
Dielectric Strength:	2.5 × rated voltage

Meets or exceeds applicable requirements of MIL-C-11015 and MIL-C-39014.

NPO DIELECTRIC CHARACTERISTICS:

Dissipation Factor:	Less than .15% at 1MHz
Insulation Resistance:	100,000 megohms or 1000 megohm-Mfd at 25°C, whichever is less
Temperature Coefficient:	0 ±30 PPM/°C, −55°C to +125°C
Dielectric Strength:	2.5 × rated voltage

Meets or exceeds applicable requirements of MIL-C-20.

HYBRID CHIP KITS

Varadyne hybrid chip capacitor and chip resistor kits are useful for breadboarding hybrid circuits, and also find wide application for trimming production circuits where required. Chip resistors may also be used during the thick film substrate fabrication process to eliminate multiple resistor screenings particularly of very high or very low resistance value.

CAPACITOR CHIP KIT SPECIFICATIONS

The capacitor chip kit contains ten chips of each of the 51 standard RETMA values from 1 pf to .015 μf. Capacitance values from 1 pf to 100 pf are provided with an NPO characteristic. Values greater than 100 pf have a BX characteristic.

CAPACITANCE VALUES

1 pf,	1.2 pf,	1.5 pf,	1.8 pf,	2.2 pf,	2.7 pf,	3.3 pf,
3.9 pf,	4.7 pf,	5.6 pf,	6.8 pf,	8.2 pf,	10 pf,	12 pf,
15 pf,	18 pf,	22 pf,	27 pf,	33 pf,	39 pf,	47 pf,
56 pf,	68 pf,	82 pf,	100 pf,	120 pf,	150 pf,	180 pf,
220 pf,	270 pf,	330 pf,	390 pf,	470 pf,	560 pf,	680 pf,
820 pf,	1000 pf,	1200 pf,	1500 pf,	1800 pf,	2200 pf,	2700 pf,
3300 pf,	3900 pf,	4700 pf,	5600 pf,	6800 pf,	8200 pf,	.01 μf,
.012 μf,	.015 μf					

CHIP SIZE: .095″ x .050″, ±.005″, maximum thickness .050″

ELECTRODE BANDS: Silver, nominally .025″ wide.

TOLERANCE: ±10%.

OPERATING VOLTAGE: 50 WVDC.

OPERATING TEMPERATURE RANGE: −55°C to +125°C.

INSULATION RESISTANCE: 100 megohms/MFD measured at 25°C. Need not exceed 100,000 megohms.

DISSIPATION FACTOR: BX: Less than 1.5%
NPO: Less than 0.1%

TEMPERATURE COEFFICIENT:
NPO: Better than ±25 ppm/°C from −55°C to +125°C
BX: Better than ±10% from −55°C to +125°C

RESISTOR CHIP KIT SPECIFICATIONS

The resistor chip kit contains ten chips of each of the 65 standard RETMA values from 10 ohms to 2 megohms.

RESISTOR VALUES (Ohms):

10	12	15	18	22	27	33	39	47	56	68
82	100	120	150	180	220	270	330	390	470	560

CHIP SIZE:

Size 1 (.050″ x .050″, ±.005″) for values from 10 to 330K ohms
Size 2 (.075″ x .050″, ±.005″) for values from 390K to 680K ohms
Size 3 (.095″ x .050″, ±.005″) for values from 820K to 1M ohms
Size 4 (.150″ x .050″, ±.005″) for values from 1.2M to 2.0M ohms
Maximum thickness .025″

ELECTRODE BANDS: Nominally .010″ wide, Pd./Ag. standard

TOLERANCE: ±10%

OPERATING VOLTAGE: 100 WVDC

POWER RATING: Size 1: 75 mw Size 3: 150 mw
Size 2: 100 mw Size 4: 300 mw

TEMPERATURE COEFFICIENT:
Better than ±200 ppm/°C from −55°C to +150°C

CERMET THICK FILM CHIP RESISTORS

These resistors are particularly useful for breadboarding hybrid circuits and for trimming production circuits where required. They also find wide application in the production of thick film hybrids where they may be used to eliminate multiple resistor screenings, particularly of very high or very low resistance values.

CHARACTERISTICS

L — LENGTH
T — THICKNESS
W — WIDTH
EB — ELECTRODE BAND .015 NOMINAL

The chips have a palladium-silver electrode band similar to chip capacitors. This band is continuous at each end from the bottom surface of the chip, around the end, to the top where it connects to the resistor material. The chips may be electric or solder bonded to the substrate. Where required, the palladium-silver electrodes are compatible with conventional wire bonding techniques.

HOW TO ORDER

3 C 122 K

3 — Cermet chip
C — Resistance value in ohms. The first two digits represent significant figures; the last digit specifies the number of zeros to follow. (1200 ohms is illustrated.)
122 — Tolerance @ 25°C
K — F: ±1%, G: ±2%, J: ±5%, K: ±10%, M: ±20%

SPECIFICATIONS

MATERIAL: 96% Alumina with palladium-silver electrodes.

RESISTOR VALUES:
Size 1: 10 ohm to 450K ohm
Size 2: 40 ohm to 825K ohm
Size 3: 60 ohm to 1.2M ohm
Size 4: 100 ohm to 2.0M ohm

SIZES:
Size 1: .050″ x .050″
Size 2: .075″ x .050″
Size 3: .100″ x .050″
Size 4: .150″ x .050″

The standard values in ohms are:

10	12	15	18	22	27	33	39	47	56	68
82	100	120	150	180	220	270	330	390	470	560
680	820	1000	1200	1500	1800	2200	2700	3300	3900	4700
5600	6800	8200	10K	12K	15K	18K	22K	27K	33K	39K
47K	56K	68K	82K	100K	120K	150K	180K	220K	270K	330K
390K	470K	560K	680K	820K	1M	1.2M	1.5M	1.8M	2.0M	

RESISTOR TOLERANCES: Standard tolerance ±10%. Also available ±5, ±2, ±1 and ±20%.

TEMPERATURE COEFFICIENT: Measured in accordance with Mil-Std-202, Method 304; ±200 ppm/°C from −55°C to 150°C. ±50 ppm/°C available in certain configurations.

POWER RATING: Maximum continuous operating at 125°C:
Size 1: 75 mw Size 3: 150 mw
Size 2: 100 mw Size 4: 300 mw

OPERATING VOLTAGE: Maximum operating voltage 100 WVDC

SHORT TIME OVERLOAD: 2.5 times the maximum DC voltage required to dissipate full-rated power for a period of 5 seconds at 25°C

NOISE: As measured on a Quan-Tech Model 315 Resistor Noise Test Set: Up to 1000 ohms, better than −20 db
1K to 30K ohms, better than −15 db
30K to 300K ohms, better than +10 db
300K to 2M ohms, better than +15 db

TEMPERATURE CYCLING: Mil-Std-202A, Method 102A, Condition C, charge less than ±.05%

MOISTURE RESISTANCE: Mil-Std-202A, Method 106, change less than ±1%

LOAD LIFE: Better than ±1% at 85°C for 1000 hours at the DC voltage required to dissipate full-rated power

TYPE NPO & BX/CX CAPACITOR CHIPS

FEATURES

- **High volumetric efficiency**
- **True monolithic construction**
- **Available in 36 sizes**
- **High Q for high frequency application up to 2.2 gHz**

GENERAL DESCRIPTION

Varadyne's capacitor chip line offers an increased volumetric efficiency of 10 to 100 times that obtained from other types of capacitors. Values range from 1.0 pf to 2.2 μf. The monolithic construction of the units provides outstanding reliability as a result of their hermeticity, ruggedness, and overall stability. The capacitance will not change more than 0% ±25 ppm/°C in the NPO type and ±15% in the BX type capacitors over the temperature range of −55°C to +125°C. The CX stability characteristics are the same as BX with the temperature range extended to −55°C to +150°C. NPO chips have an extremely high Q factor of better than 5000 at 1 mHz.

GENERAL SPECIFICATIONS

Temperature Range: NPO/BX: −55°C to +125°C
CX: −55°C to +150°C

Tolerances: F. ±1% (NPO only)
G: ±2% (NPO only)
J: ±5%
K: ±10%
M: ±20%

Dissipation Factor: BX/CX: less than 1.5%
NPO: less than 0.1%

Insulation Resistance: 1000 megohms-mfd (measured at 25°) need not exceed 100,000 megohms.

Electrodes: Fuse bonded electrodes for soldering or braz g directly to substrates (as in hybrid circuit applicatio) or for conventional wire lead attachments. Electrodes e silver unless otherwise specified. See "HOW TO ORDE "

Life Test: When tested 1000 hours at 200% rated dc volta e at 125°C, dissipation factor less than 1.0% for NPO a 2.5% for BX/CX. Insulation resistance is the lower f 10,000 megohms or 100 megohms × capacitance in , parameters measured at 25°C

Moisture Resistance: Exceeds requirements of MIL-C-1101 , when tested in accordance with MIL-STD-202, Method 1 .

Dielectric Strength: Tested at 4 × rated voltage at 25°C 5 seconds, current limited to 50 ma.

Volumetric Efficiency: NPO: Up to .45 μf per cubic inch.
BX/CX: Up to 20 μf per cubic inch.

HO TO SELECT A CHIP CAPACITOR FROM THE CAPACITOR GUIDE

1) D de from the specifications whether an NPO BX/CX type capacitor is more desirable.
2) D de on 50 v or 100 v capacitor rating.
3) S the blue MAX column below corresponding the selections made in (1) and (2) from top ottom until a maximum value greater than desired value is found.
TE: The gray horizontal columns represent ndard capacitor sizes.
4) S further to determine all the sizes whose imum value exceeds the desired value and se minimum value is less than the desired e.
5) at the dimensions listed in the same hori- al columns as the chosen capacitance ranges a desirable size is found.
6) Look at the far left of the horizontal column corresponding to the desired size and capacitance, and read the size number. Use this number along with the capacitance value for ordering.

EXAMPLE:

A 100 v, 2700 pf capacitor is desired for the application. Scanning the 100 v NPO MAX column, maximum values of from 2700 pf to .022 µf are available in sizes 17, 7, 8, 36, 9, 24, 10, 27, 22, 14, 11, 25, 32, 12, and 15. The most desirable size is .395 x .145 x .065. Consequently, size 27 is chosen. On second consideration, however, a smaller size for the capacitance would be even more desirable. Scanning back along the MAX column, size 17 is the smallest size in which 2700 pf can be obtained. The size to order in this case is 17.

IC COMPATIBLE CHIP CAPACITORS

FEATURES

- Maximum thickness of 15 mils for compatible IC packaging
- True monolithic construction
- Extremely high values of capacitance
- High Q for high frequency application up to 100 mc

APPLICATIONS

These NPO and BX capacitors are ideally suited for those applications requiring circuit optimization where it is desired to improve the IC temperature performance and speed of operation. They may also be used for filtering, bypass, coupling and isolation applications. A line of IC compatible chip resistors is also available.

GENERAL DESCRIPTION

The monolithic construction of Varadyne capacitor chips provides outstanding reliability as a result of the hermetility, ruggedness and overall stability provided by the structure of this type of capacitor. Type NPO elements are extremely stable. Their capacitance will not change more than ±20 ppm/°C over the temperature range from −55°C to +125°C. Also they have an extremely high Q factor of better than 5000 at 1 mc. Type BX elements have a capacitance change of not more than ±15% over the temperature range from −55°C to +125°C. These capacitors have a maximum thickness of .015 inches, allowing the chips to be mounted adjacent to integrated circuit chips in standard IC packages.

T — THICKNESS
W — WIDTH
EB — ELECTRODE BAND

TYPICAL CHARACTERISTICS

GENERAL SPECIFICATIONS

Temperature Range: −55°C to +125°C

Tolerances: F: ±1% (NPO only) J: ±5%
G: ±2% (NPO only) K: ±10% M: ±20%

Dissipation Factor: BX: Less than 1.5% — NPO: Less than 0.1%

Insulation Resistance: 1000 megohms - MFD (measured at 25°C) need not exceed 100,000 megohms.

Electrodes: Fuse-bonded palladium/silver for die-attaching or soldering directly to metallized substrates (gold, platinum/gold, palladium/silver, solder dipped). Special electrodes available on request.

Life Test: When tested 1000 hours at 200% rated DC voltage at 125°C. Dissipation Factor is less than 1.0% for NPO and 2.5% for BX, and the Insulation Resistance is the lower of 10,000 megohms or 100 megohms x capacitance in μf, parameters measured at 25°C.

Moisture Resistance: Exceeds requirements of MIL-C-11015C, when tested in accordance with MIL-STD-202, Method 106.

Dielectric Strength Test: Tested at 4 x rated voltage at 25°C for 5 seconds, current limited to 50 ma.

Operating Voltage: 50 wvdc max.

- M i-section design available

GE AL DESCRIPTION

Var ne feed-thru type monolithic cer ic capacitors offer the filter de-sig a wide range of available dielec-tric pes and voltages. Construction is tru onolithic type, in which the indi-vid layers are compacted and formed in unfired state and then fired to-get to produce a highly reliable, env nmentally stable ceramic slug of treme durability and ruggedness. The ompacting or monolithic process allo an increase in volumetric effi-cie of from 10 to 100 times that of evious conventional single-plate fee hru designs, which in turn allows the lter designer a new dimension in filt miniaturization. Almost any form fac (i.e. ratio between outer diameter an nner diameter) is available to fit all rrent tubular filter packages.

APPLICATIONS

Broad band RFI filters generally require very high values of capacitance which in the past have been supplied by comparatively bulky mylar or metallized mylar tubular capacitors. Current miniaturization of RFI filters requires the increased volumetric efficiency offered by these Varadyne monolithic feed-thru capacitors. In addition, the monolithic feed-thru, being environmentally stable, does not require encasement for applications where direct soldering to a chassis or bulkhead may be necessary. In this case, excellent capacitive filtering is obtained and a ferrite slug may be added for effective "L" section filtering if desired.

Multi-section feed-thrus for special RFI filters are available on special order. These feed-thrus vary from four to twelve capacitors per section. Special interlayer design provides a high degree of separation to virtually eliminate cross channel coupling.

CUSTOM DESIGN GUIDE

HUMISEAL COATINGS

GENERAL CHART

Listed in this General Chart of Properties are ten of the most frequently used HumiSeal Protectiv Coatings and their principal properties. These have been tabulated in order to facilitate compariso of their characteristics and selection of the most suitable type for a specific application. In additio to these HumiSeal types we manufacture a variety of coatings for special purposes, including hig temperature applications. Should none of the coatings listed in this chart fulfill your requirement we suggest that you contact us for recommendations.

	PROPERTIES OF LIQUID HumiSeal										THERMAL PROPERTIES		
HumiSeal Type[1]	Specific Weight (lbs. per gallon)[2]	Solids Content (% by weight)[3]	Viscosity, with catalyst when applicable (centistokes)[4]	Flash Point (°F)[5]	Drying Time for Handling[6]	Recommended Curing Conditions	Time Required to Reach Optimum Properties	Pot Life, at Room Temperature	Shelf Life, at Room Temperature	Coverage per gallon (in sq. ft.) After One Dip	Continuous Use Temperature Range (°F)	Thermal Shock Test[7]	Solderability[8]
1B12	7.3	20	30	40	10 min.	24 hrs. at room temp. or 30 min. at 170°F	24 hrs.	1 year	1 year	550	−75°F to +280°F	Passes	Good
1B15	7.6	35	470	30	10 min.	24 hrs. at room temp. or 30 min. at 170°F	24 hrs.	1 year	1 year	450	−75°F to +270°F	Passes	Good
1B31	7.6	35	160	30	10 min.	24 hrs. at room temp. or 30 min. at 170°F	24 hrs.	1 year	1 year	450	−75°F to +270°F	Passes	Good

2A53	7.8	54	300	70	30 min.	2 hrs. at 200°F	1 week	24 hrs.	1 year	400	−70°F to +250°F	Passes	Poor

HumiSeal TYPES LISTED IN BOLD PRINT COMPLY WITH THE REQUIREMENTS OF MIL-I-46058B

All technical data in this bulletin are based on test results using the stated standards and are believed to be correct. However, since the end use of HumiSeal materials (and the manner of storing and handling them) is beyond our control, we make no warranty — expressed or implied — as to the fitness of use, results to be obtained from or effects of use with respect to these materials. Their use shall be solely by the judgment of and at the risk of the end-user notwithstanding any statement contained in this bulletin.

1. The first digit in the type number specifies whether the prod is a one-, or a two-component system.
2. Fed-Std 141a, Method 4184.
3. Fed-Std 141a, Method 4044.
4. Fed.Std 141a, Method 4287.
5. Fed-Std 141a, Method 4291.
6. Fed-Std 141a, Method 4061.
7. Mil-I-46058B.
8. Visual evaluation for ease of soldering with an 85 watt ir through a 2 mil film.
9. Fluorescent or color coding dye may be added if required.
10. Fed-Std 141a, Method 2121.
11. Fed-Std 406, Method 7031, Procedure A.
12. Fed-Std 141a, Method 6303.
13. ASTM-D150-65T, at 1 MHz and 25°C.
14. Mil-I-46058B. Insulation resistance during 10th cycle, at 65 and 98% RH.

FOR ELECTRONICS

OF PROPERTIES

miSeal Protective Coatings are available in one-quart or one-gallon cans, five-gallon pails, or fifty-e gallon drums. HumiSeal types 1B15 and 1A27 are also available in 16-ounce aerosol containers. HumiSeal types listed in this chart may be applied by dip, brush or spray. Our recommended tech-ques for the proper application of coatings and the preparation of the substrates are described in r booklet titled "How to Use Protective Coatings Efficiently" which will be mailed to you on request sk for Bulletin No. 79).

An unretouched photographic demonstration of the purity of Waycoat Resists.

Take the plunge.

see for yourself the purity of Waycoat photo resists for the semiconductor industry.

Purity is the big reason why **WAYCOAT IC RESIST,** for the manufacture of integrated circuits, has been such a huge success. Recognizing the quickly changing requirements of the industry, **Hunt** now introduces **WAYCOAT SC RESIST** for deep or mesa-type etching and plating.

Take a good look at the advantages of the Waycoat Photo Resist System.

Application — Spin them or spray (Zicon) on SiO_2 and metallic substrates.

Quality Characteristics — Waycoat resists can be used right from the bottle without filtration because particulate matter is removed to sub-micron level and inorganic residuals are practically non-existent.

Etching — 0.2 to 0.3 mils routine with Waycoat IC Resist. But you need Waycoat SC Resist for that deep Mesa-type device.

Physical Characteristics — It's been said in the industry that Waycoat IC Resist and Waycoat SC Resist work best in the new electroplasma low temperature ashing systems. In addition you can keep Waycoat Resists on the shelf as long as you like — no gunk on the bottom of the bottles.

High Yields and Resolution — You can put more resist on, get a lower pinhole count and still get **fine line resolution.**

Waycoat Systems Approach — Don't bother filtering Waycoat IC Resist, Waycoat IC Thinner, Waycoat IC Developer or Microstrip. It's already been done to the sub-micron level. On the other hand, Waycoat SC Resist gives thicker film coatings — we recommend Waycoat PF Developer and Waycoat PF Thinner. Each system fills a specific need but all are interchangeable.

Clean Room Packaging — We package Waycoat Photo Resists and companion products in extra clean glass bottles to maintain the highest degree of purity available to the industry. So, you can be sure of batch-to-batch reproducibility. After all, it doesn't make much sense to put such pure photo resist products in ordinary, unclean containers.

For additional data — (Advanced Information Bulletin No. 210-Waycoat IC Resist, Bulletin No. 212-Waycoat SC Resist), contact the Photopolymer Division,

YOUR HOT LINE

To The Leader...In Electronic Grade Etchants

Call Hunt—the leading manufacturer of etchants for the Printed Circuit Industry — for quick dependable service and product reliability. Each major type of copper etchant produced by Hunt has guaranteed high quality and product uniformity assured by rigid laboratory control.

The following are available for immediate delivery in package or bulk shipments:

HIGH-SPEED CIRCUIT ETCH The fast etching, high capacity FERRIC CHLORIDE-type etchant that exceeds all other etchants in the etching of fine-line printed and photo resist circuitry. It etches clean and smooth with a minimum of undercut. Especially recommended for high production precision etching of the inner layers of multi-layer printed circuit boards and flexible circuitry.

NO. 826 ETCHANT The powerhouse of CHROME-type etchants designed especially for close-tolerance etching of plated circuit boards. Its long life and fast etch rate, combined with its compatibility with all types of resists — both metallic and organic — makes it equally desirable as an all-purpose etchant.

ALK-ETCH The popular choice when an ALKALINE etchant is specified. A dependable two-part system that mixes with water to provide a versatile all-purpose etching solution. It features a rapid etch rate, high copper capacity, and good bath stability. Minimizes undercutting, especially on copper laminates with plated bimetallic resists. Reduces disposal problems.

PHILIP A. HUNT CHEMICAL CORPORATION

Palisades Park, New Jersey • Branches in Principal Cities • PHILIP A. HUNT COMPANY (CANADA) LTD. Toronto

CHEMICAL TOOLS FROM TECH SPRAY

Clean electronic equipment of all types without disassembly while running. KLEEN-ALL is non-conductive, nonflammable, can't short or arc. So safe that you can put out a match with the spray. Instantly spray-cleans relay and switch contacts without danger as they make and break under load.

No. 1604-16S 16 ounces
Less than 1 dz. 2.20/can
1 to 5 dz. 24.00/dozen
6 dz. & up 22.80/dozen

LUBE-A-TROL is a special blend of heavy duty thick white lubricant, silicone fluid and a highly efficient cleaner that is safe for all plastics. Excellent for all wire wound and carbon controls including the new miniature and plastic controls. Gives extra long lasting protection.

No. 1605-8S 8 ounces
Less than 1 dz. 1.89/can
1 to 5 dz. 20.40/dozen
6 dz. & up 19.20/dozen

RID ARC is the finest red insulating spray available. It provides excellent protection against arcing and corona discharge. Dries rapidly to tough permanent film.

No. 1609-8S 8 ounces
Less than 1 dz. 1.59/can
1 to 5 dz. 18.00/dozen
6 dz. & up 17.20/dozen

SUPER FREEZE SPRAY is a new improved chilling spray. Instantly chills suspected parts and causes intermittent ones to break down. Will not harm good components. Packed with pinpoint extension.

No. 1611-16S 16 ounces
Less than 1 dz. 1.89/can
1 to 5 dz. 20.40/dozen
6 dz. & up 19.20/dozen

CLEAR ACRYLON is an excellent protective coating for many purposes. Crystal clear coating protects against tarnish and oxidation when used on metal surfaces. Protects important papers and circuit diagrams from smudges and dirt.

No. 1612-16S 16 ounces
Less than 1 dz. 1.30/can
1 to 5 dz. 14.40/dozen
6 dz. & up 13.80/dozen

MULTI OIL is a special low viscosity low temp oil that is non-gumming and non-evaporative. It has excellent penetrating, preservative and water displacing properties. Rust and corrosion inhibitors have been added for long term protection. MULTI OIL meets the requirements of MIL-L-7870a and VV-L-800 (MIL-L-644b).

No. 1634-8S 8 ounces
Less than 1 dz. 1.19/can
1 to 5 dz. 12.84/dozen
6 dz. & up 12.00/dozen

AERO KLEEN is designed to clean aircraft switches, controls, contacts and relays. It is absolutely pure, dries rapidly and leaves no film or residue to cause drift, oscillation or frequency shift. Excellent on inductor switches, transmit/receive relays and cavity type oscillators. Formulated entirely of fluorinated hydrocarbon.

No. 1636-16S 16 ounces
Less than 1 dz. 2.69/can
1 to 5 dz. 29.00/dozen
6 dz. & up 27.50/dozen

AERO KLEEN PLUS is formulated of the same precision cleaner used in AERO KLEEN with the addition of a special military grade silicone fluid which provides lubrication and protection with a lasting film. Safe to spray into operating contacts.

No. 1637-16S 16 ounces
Less than 1 dz. 2.69/can
1 to 5 dz. 29.00/dozen
6 dz. & up 27.50/dozen

Use FD to clean VTR and Audio Tape Heads. Lifts out microscopic dirt that destroys fidelity. Can be used on microwave equipment without loss of quality. Leaves no residue.

RESEARCH LABS
Use FD in your White Rooms. Leaves no residue, high dielectric properties allow FD to be used while circuitry is in operation.

No. 1638-1G 1 gal. 16.50
No. 1638-16S 16 oz. spray can
Less than 1 dz. 2.49/can
1 to 5 dz. 27.00/dozen
6 dz. & up 25.80/dozen

TRANSISTOR SILICONE GREASE is a new product designed to coat the bases of transistors before mounting them to heat sinks. Heat conductive material draws the heat away from the transistor and transfers it to the heat sink where it is dissipated. Similar to the old style heat sink compound. Transistor Silicone Grease is easier to use and more economical.

No. 1642-6S 6 ounces
Less than 1 dz. 2.95/can
1 to 5 dz. 32.40/dozen
6 dz. & up 31.20/dozen

D-MP displaces and removes moisture from motors and other electrical equipment that have failed due to moisture. Meets MIL-C-23411, protects equipment against rust and corrosion reforming by leaving a fine protective film. Gives protection against salt water and acid fumes.

No. 1643-16S 16 ounces
Less than 1 dz. 1.49/can
1 to 5 dz. 16.20/dozen
6 dz. & up 15.60/dozen

ROSIN FLUX REMOVER is used to remove rosin fluxes from all types of electrical and electronic circuits. Specially useful on printed circuit boards in high frequency circuits where contamination can cause frequency shift. Not harmful to Nylon, Teflon or polyethylene insulation materials.

No. 1644-16S 16 ounces
Less than 1 dz. 2.25/can
1 to 5 dz. 27.00/dozen
6 dz. & up 24.60/dozen

SILICONE RESIN COAT is a tough flexible coating used to coat printed circuit boards and components to protect them. Same material as originally used during manufacture. Insulates and prevents shorts. Coats evenly and air dries quickly, requires no baking.

No. 1645-6S 6 ounces
Less than 1 dz. 1.49/can
1 to 5 dz. 16.20/dozen
6 dz. & up 15.60/dozen

SILICONE LUBRICANT lubricates auto antennas and makes them easier to raise. Seals out moisture from all objects. Lubricates and lengthens the life of rubber parts. Eliminates squeaks and prevents freezing of rubber parts.

No. 1646-16S 16 ounces
Less than 1 dz. 1.30/can
1 to 5 dz. 14.04/dozen
6 dz. & up 13.44/dozen

High Temp M.D.S. contains colloidial Molybdenum Disulfide. When sprayed onto metal surfaces the molybdnenum disulfide clings to the metal and forms an extremely effective lubricant. Very effective under high pressure and high temperature conditions.

No. 1655-8S 8 ounces
Less than 1 dz. 1.89/can
1 to 5 dz. 20.40/dozen
6 dz. & up 19.20/dozen

PENETRATING LUBRICANT is a special clear penetrant designed to loosen rusted threads and lubricate them so that they will not re-freeze. The special clear penetrant is not messy and will not stain. Excellent penetrating and lubricating qualities.

No. 1656-8S 8 ounces
Less than 1 dz. 1.19/can
1 to 5 dz. 12.84/dozen
6 dz. & up 12.00/dozen

TECH SPRAY P. O. Box 949 ▪ Amarillo, Texas Canada: Wm. Cohen, Montreal Export: Empire Exporters, N.Y.C.

toroids OSCILLATORS

ALWAYS IN STOCK
AT ALLEN ELECTRONICS.

Allen Electronics Division manufactures these components in accordance under the most rigid quality controls, including thorough inspection and testing, for use in the world's finest electronic organs. For this reason we constantly maintain a complete inventory, which is also available to you who desire the added benefits of lower-than-competitive prices and immediate out-of-stock delivery.

TOROIDS

Available from stock. They have been used successfully in such areas as: telemetry, sound and intercommunication systems; geophysical applications; mobile communications; filters; oscillators; and test equipment.

Ferrite Core — Inductance Tolerance ± 5%

OSCILLATORS

TYPE "C" AUDIO OSCILLATOR

This compact unit is designed for applications that have moderate requirements for stability in respect to temperature and frequency drift. The transistorized package is completely encapsulated and provides a construction that is extremely rugged.

SPECIFICATIONS
Frequency — Any frequency from 15 Hz. to 10 kHz.
Frequency Accuracy — ± .2% of specified frequency with 12V. D.C. input, resistive load of 200K ohms and 24° C. ambient.
Frequency Drift — Approximately 1% from -20°C. to +45°C. Less than 0.3% with input voltages from 10 to 14V. D.C.
Frequency Adjustment Range (using external components) — ± 2.0% (see arrangements two and three below)
Input Voltage — 5 to 15V. D.C.
Input Current — Does not exceed 5 ma. @12V. D.C.
Output Voltage — Proportional to input voltage. Typically 1.5 to 2.0V. RMS with 12V. D.C. input and a load resistance of 200K ohms.
Output Wave Shape — Sinusoidal. Total distortion approximately 2.0% with 12V. D.C. input.
Dimensions — 15 — 249 cps. 4 3/8" x 2 13/16" x 1½"
250 — 10,000 cps. 3 9/16" x 2½" x 1 1/8"

Type "C" oscillators can be produced in the following arrangements:
1. Any specific frequency in the range at an ambient temperature of 24° C. and with no provision for frequency adjustment.
2. Provision for frequency adjustment of ±2% of a specified frequency by means of an externally connected capacitor (Type "C"). A capacitor will be furnished which will provide the specified frequency at 24° C. ambient.
3. Provision for continuously variable frequency adjustment of ± 2% of a specified frequency by means of an externally connected variable resistance and a fixed capacitor. External components not furnished but component values are specified. This feature is very convenient when a "front panel" fine adjustment of frequency is desirable.

PRICE — Order by specifying type, frequency and arrangement number.

Frequency	Price
15 — 20 Hz.	$ 39.20
21 — 100 Hz.	$ 26.50
101 — 500 Hz.	$ 21.20
501 — 10,000 Hz.	$ 26.50

QUANTITY DISCOUNT
Discount is applicable for quantities of one frequency only.

Quantity	Discount
1 — 10	Net
11 — 50	Less 15%
51 — 99	Less 20%
100 — up	Less 25%

TYPE "P" SINE WAVE OSCILLATOR

A plug-in unit with a standard octal tube base type connector. A knurled thumbscrew type adjustment on top of the unit provides for variable, fine adjustment of frequency, plus or minus two per cent of the specified frequency.

SPECIFICATIONS
Frequency — Any frequency from 20Hz. to 200 kHz.
Frequency Drift — Approximately 1% from -20° C. to +45°C. Less than 0.3% with input voltages from 10 to 14V. D.C.
Input Voltage — 5 to 15V. D.C.
Input Current — Does not exceed 5 ma. @ 12V. D.C.
Output Voltage — Proportional to input voltage. Typically 1.5 to 2.0V. RMS, with 12V. D.C. input and load resistance of 200K ohms.
Output Wave Shape — Sinusoidal. Total distortion approximately 2.0% with 12V. D.C. input.
Dimensions — Mounting area — 2 3/16" square. Overall height — 4 3/4" max. Height above octal mounting socket — 4" max.

PRICE — $35.00. Order by specifying type and frequency.
QUANTITY DISCOUNT—Same discount schedule as Type "C"

Amperex Video Display Devices

MAGNETIC DEFLECTION YOKES

SERIES AT1040

Amperex B & W Line Deflection Yokes has been designed for use with 90° and 110° picture tubes having a neck diameter of 28mm. They employ saddle shaped line coils and toroidal frame coils with coinciding deflection centers. They have been designed for operation with tube-equipped or transistor-equipped TV.

SERIES AT1055

Amperex Color Line of Deflection Yokes consists of two major groups. Variations of our **Compact** color deflection yoke AT1055 Series can be used on 19-25 inch 90° shadow mask color CRTS. This yoke employs saddle horizontal and vertical coils isolated by means of non-flammable polypropylene shell-liners. The horizontal and vertical coils are connected in series, but can be parallel connected upon request.

SERIES AT1022

Amperex Second Major Line of Color De flection Yokes is our AT1022 Series. Thi professional series is aimed at monito manufacturers requiring a high qualit product. Designed for 90° shadow mas color CRT sizes 18-25" offering very tigh tolerances. This yoke is designed to b rotated and oriented within its own me chanical housing.

HORIZONTAL OUTPUT TRANSFORMERS: TYPE AT2083

Two types available. 3rd harmonic and 5th harmonic tuned 20-25 KV execution. Both types are of flame proof construction. Both executions are designed for use in color TV receivers.

VERTICAL OUTPUT TRANSFORMERS: TYPE AT3513

Amperex AT3513 vertical output transformer is designed for tube equipped and transistorized television receivers. This output transformer is intended for use with 19 and 23 inch 110° CRTS, in conjunction with the Amperex Deflection Yoke AT1040. The magnetic circuit is comprised of 2 C-cores and three separate windings.

ADJUSTABLE LINEARITY CONTROL: TYPE AT4042/20

This unit has been designed for use in color TV circuits to adjust the linearity of the line deflection. It consists of a coil wound about a FERROXCUBE rod and three FERROXDURE magnets. This control is adjustable by means of a rotating magnet which adjusts the biasing field and thus the linearity of the line deflection.

DELAY LINES: (TYPE DL40 ILLUSTRATED)

Two types of Glass Delay Lines are available from Amperex. Both D. lines are intended for use in decoded circuits of color TV receivers. For receivers up to European PAL standard the nominal frequency of these lines is 4.433619 MHz and the phase delay time is 63.943 microseconds.

PINCUSHION TRANSDUCTOR: TYPE AT4041

This transductor is used in conjunction with deflection circuitry for large screen color television to correct for North-South and East-West distortion. Only device of its type, offering four-way correction. An amplitude control is also available to vary the amount of correction. Will replace active circuits performing same task.

TOROIDS

HIGH TEMPERATURE PLASTIC-CASED CONVERTER

Toroids designed to exceed MIL-T-27A grade 5 class R requirements with added life expectancy thru increased efficiency and reliability.

Normal operation frequency between 1500 and 5000 Hz. Special designs obtain operating frequency to 10,000 Hz.

MINIATURE VARIABLE INDUCTORS

Available in inductance ranges from 0.1 to 4700 uH
Designed to meet MIL-C-15305C

Designed for printed circuit application, this Automatic Coil series offers high reliability and exceptional stability over extreme temperature variations. For high reliability, inductors are fully epoxy-encapsulated. They are shock-proof and moisture-proof.

Ideal for printed circuit application, these high-Q units measure 13/32" in diameter by 1/2" high. Two mounting terminals are spaced 9/32" on center for vertical mount. The tuning access is from either end.

ELECTRICAL CHARACTERISTICS

Inductance Range: 0.33 to 4700μH Tunable Range ±20%
0.15 to 0.22μH Tunable Range ±15%
0.1μH Tunable Range ±10%
All measurements at 25°C on Q-Meter using miniature alligator clips mounted ¼" from body.

Self-Resonant Frequency: Minimum f_0 to be not less than 80% of published data as measured with Grid-Dip Meter

DENSITY CHARACTERISTICS

Volume: 0.063 cubic inches

Weight: 2.6 grams

PHYSICAL AND ENVIRONMENTAL CHARACTERISTICS

Torque: 0.75 to 5.0 inch-ounces

Operating Temperature: −55°C to +125°C

Terminal Strength: Meets five pound pull tests.

Moisture, Vibration, and Shock Resistance: Meets requirements of MIL-C-15305C, Grade 1, Class B. Vibration: Low frequency 10 Hz to 55 Hz at .06" total excursion at rate of 1 linear sweep per minute for 2 hours repeated for each of 3 mutually perpendicular planes. Shock: 50G, 11ms.

Marking: Manufacturer data printed.

MPC SERIES COLOR-CODED TOROIDS

Molded printed circuit toroids available in ten coded E.I.A. colors. Designed to speed production of printed circuit assemblies, the color coding can be used to indicate the correct value toroid to use and where to position it on the PC board.

Inductance values range from 100 microhenries to 500 millihenries. The toroid can be furnished tapped or with a secondary winding to satisfy requirements.

Dimensions are: O.D. 27/32"; height: 5/8" max.; pins: 1/8" long +1/16"−0.

SPECIAL ASSEMBLIES

Automatic Coil, with nearly 20 years of experience, is a reliable source of standard RF coils, transformers, toroids and filters. And an innovative source of custom designed components and assemblies. Write for free catalog.

COIL ASSEMBLIES
Shown here are typical special coil assemblies manufactured for use in the U.S. Navy WRC-1 Receiver-Transmitter System (Receiver R1051, Transmitter 827, Amplifier AM-3007, Antenna Coupler CU-937)

DISCRIMINATORS & FILTERS
Band Pass, Band Rejection, Low Pass, High Pass. Various types of discriminators from 1000 hertz to 3000 hertz tuned and hermetically sealed.

R-F & I-F XFMRS
Hermetically sealed R-F and I-F transformers for military and high quality commercial application.

RF COIL ASSEMBLIES
These high frequency, precision coil assemblies are produced for the U.S. Navy PRC-47 Personnel Radio Communication System.

HIGH VOLTAGE XFMRS
High frequency high voltage power supply transformers, used on the Radar Jitter Tester.

TRANSFORMERS
The complete set of 11 transformers, consisting of R-F, I-F, Limiter & Discriminator for the GRC/R108, R109 and R110 Radio Receiver. Signal Corps.

VARIABLE PITCH COILS
Complete facilities for variable pitch winding, to customer's specific requirements.

VARIABLE INDUCTOR & CAPACITOR ASSEMBLY
Pick transformer, variable inductor and capacitor assembly for a 10 K.W. Transmitter manufactured for the Navy. (T-17)

MICA FILLED SUPPORTS & ASSEMBLIES
for low loss transformers and R-F coils.

R-F CHOKE COILS
Low distributed capacity R-F Choke Coils—for the Radio AN/GRR-5.

DALE for Optimum Value in Inductive Components

TOUGH COIL JOBS? Whether you need a hundred pieces or a million, you'll find we offer ■ Faster turn-around on custom samples ■ Complete design and engineering assistance ■ Close production coordination including cost-saving statistical control on high volume items. We're ready to talk business.

Engineering and Development

When engineering assistance is required, Dale is staffed and equipped to perform.

1. Production Engineering to translate your specifications into a product with **optimum quality** and **economy:**
2. Development Engineering to provide the electrical function you require.
3. Design Engineering to transform your basic idea into parts.

Production

Ability to move quickly in converting your order to finished parts is a Dale trade-mark. Facilities are available for everything from high volume commercial parts to highly sophisticated military items requiring specialized production and test equipment. In dealing with Dale, you draw on a background of production experience which can provide a definite advantage in accelerating availability.

Quality Control

Fulltime quality control personnel and the facilities of Dale's company-wide reliability and quality control organization enable fast action in establishing military test procedures and in meeting other government requirements—including MIL-Q-9858.

CUSTOM TOROIDS

- Potted with case sizes to fit your specific designs.
- Open Wound using Dale-formulated coatings for extra protection.
- Hermetically-sealed Cans.
- Pulse Transformers, Inverters, RF Inductors and Transformers with or without terminal boards. Unusual shapes and sizes a specialty.

CUSTOM BOBBIN COILS

- Statistical Control on high volume production items.
- Low initial tooling cost.

RF TRANSFORMERS & INDUCTORS

- Powdered Iron Bobbins
- Ceramic Form Types
- Molded Solenoids
- P.C. Cans & Transformers

VARIABLE PITCH INDUCTORS

- Extensive design background in all sizes.
- Complete engineering assistance.

DALE ELECTRONICS, INC., Box 180, Yankton, South Dakota 57078 Phone: 605—665-9301 *A Subsidiary of The Lionel Corporation*

DALE *for Optimum Value in Inductive Components*

CUSTOM CHOKES

- Axial lead models
- Transformers on choke forms
- Universal wound models

EPOXY CONFORMAL COATED CHOKE TYPE IR-2

- Equivalent in quality to molded models—at lower price.
- More durable than lacquer-coated models at comparable cost.
- Designed to meet requirements of MIL-C-15305D, Grade 1, Class B.

1. Boonton Radio Corporation Type 260A Q-Meter
2. Measurements Corporation Megacycle Meter, Model 59
3. Wheatstone Bridge

SERIES RESONANT TRAP

Dale has developed and patented a single, hybrid-type component which has the electrical characteristics of an inductor and a capacitor in series. This unit utilizes Dale's technological capabilities in the design and manufacture of hybrid components, thus reducing costs, space requirements and assembly time.

- Precise inductance and capacitance functions in a single unit.
- Saves purchasing and engineering time.
- Eliminates need for matching two components to circuit.
- Saves space.
- Reduces materials handling.

An approximate equivalent circuit is shown below. The basic design limitation is in the usable impedance range.

At this time, the design capabilities are between 1 Mhz and 90 Mhz. Please consult factory on your specific frequency requirements.

TRAPS AVAILABLE FROM STOCK

	FREQ.	FREQ. TOL.	IMP. @ RESONANCE	INDUCTANCE	CAPACITANCE

First on the list... (even the moon's)

H. & H. specializes in the design and manufacture of magnetic components for military and industrial applications. When the successful Lunar Excursion Module hit the front pages, H. & H. made the newspapers . . . after much hard work.

H. & H. isn't only "first on the moon." It's first on many, many lists. If we aren't first on yours . . . we really should be.

✓ *Both of these H. & H. units feature extremely critical electrical characteristics. Fully encapsulated and using unusual pin design, both are now being used aboard the U.S. Navy's underwater missiles.*

✓ *The trick to turning out this magamp (for motor speed controls) both economically and with minimal lead-time, is production "know-how."*

✓ *H. & H. won the bid for this alternator-stator. It's an encapsulated energy supply source for one of the DOD's latest undersea operations*

✓ *H. & H. toroids used in solid-state controls for total energy systems are climbing in demand. Assembly methods are the very latest. Prices are unusually low and quotes are "hand tailored."*

✓ *This H. & H. stator —featuring high reliability—was quickly accepted by one of the nation's leading areospace component manufacturers. Its quality is hard to surpass.*

✓ *Transformers ("C", "EI" and three-phase "E" core) for static converters, inverters and machine control. These highlight close tolerance both on electrical and mechanical characteristics.*

When you have a question . . . call us. We can help you find the answers.

We're at 216 / 261-7700.

TOROIDAL INDUCTORS

Hisonic Toroidal Inductors are wound on either nickel-iro molybdenum (molybdenum permalloy) or carbonyl iron powde cores. Standard tolerance is 1% and values are true inductance Units are available uncased, molded or cased as shown. Molde units are compression molded in high strength, high tempera ture thermosetting resin and pass requirements of MIL T 27 Grade 5 Class R. Cased units are hermetically sealed in shield cans and pass requirements of MIL T 27 Grade 4 Class R

Above units also available in encapsulated construction with pin terminals arranged for printed circuit board applications. Write for information on 5101 - 5103 and 5105 series.

The above units represent only a small percentage of those available as standard from Hisonic, but represent those most commonly used. Thousands of additional standard inductors are available, one of which should meet your requirements. **Special** requirements get prompt and accurate development from Hisonic Custom Design Service.

Hisonic, with a background of 23 years experience in toroidal components, is headquarters for all your needs.

Write today for the Hisonic, Inc. catalog which contains full information on all Hisonic standard Toroidal Inductors and Hisonic Custom Design Service.

"SPECIAL" AND STANDARD INDUCTANCES CATALOG LISTS THE COMPLETE MILLEN LINE OF INDUCTORS

JAMES MILLEN MFG. CO., INC.

MAIN OFFICE AND FACTORY

MALDEN, MASSACHUSETTS, U.S.A.

Nytronics Inductors

Wee-Ductor — Magnetically shielded with inductance range 0.1 to 180,000 μH, designed to MIL-C-13305, Grade 1, Class B.
Encapsulated Envelope:
0.157" diameter x .450" length.

Wee Wee-Ductor — Magnetically shielded with inductance range 0.1 to 10,000 μH. Designed to MIL-C-15305.
Encapsulated Envelope:
0.125" diameter x 0.335" length.

Pee-Wee Ductor — The Pee Wee Ductor represents a 66% size reduction from the smallest magnetically shielded inductor previously available anywhere. Inductance values from .025 μH to 10,000 μH. 49 values available from stock from 0.1 μH to 1,000 μH.

Super Wee-Ductor — Manufactured in accordance with MIL-C-15305D, Molded Magnetically shielded with inductance range 0.1 to 100,000 μH ±10% tolerance.
Molded Envelope:
0.163" diameter x 0.410" length.

Super Wee-Wee-Ductor—Miniature shielded with inductance range 15.0 μH to 10,000 μH. Designed to MIL-C-15305, Grade 1, Class B.
Epoxy-Molded Envelope:
0.125" diameter x 0.335" length.

Pee-Cee Ductor — This inductor is designed to meet MIL-C-15305C, Grade 1, Class B. Printed board mounting is facilitated by 0.200 grid spacing and unit has shielded construction to allow maximum density packaging. Standardized in 73 stock values.

S-M-L Inductors—Non-shielded with inductance range 0.1 to 10,000 μH. Designed to MIL-C-15305, Grade 1, Class B.
Molded Envelope:
"S" Type — 0.188" diameter x 0.44" length
"M" Type — 0.25" diameter x 0.60" length
"L" Type — 0.31" diameter x 0.90" length

Adjustoroid—Adjustable toroid available in nominal values from 0.01 Hy to 12 Hy. This unit provides stepless adjustment in a completely hermetically sealed package.

Wee V-L — Magnetically shielded adjustable range 0.1 to 100,000 μH. Designed to MIL-C-15305, Grade 1, Class B. Epoxy Molded 0.300" diameter x 0.400" length.

Variable Inductor — Unlimited with adjustable range 0.1 to 4700 μH. Designed to meet MIL-C-15305, Grade 1, Class B.
Encapsulated Envelope:
0.400" diameter x 0.500" length. Vertical or Horizontal mounting.

Wee-Chip Inductor—The Wee-Chip Inductor is a magnetically shielded miniaturized inductor made especially for mounting on substrates. Copper terminations are of the wrap-around type for the highest degree of mounting flexibility. Available from stock in 23 standard values.

Deci-Ductor — Subminiature with inductance range 0.1 to 1000 μH. Designed to MIL-C-15305, Grade 1, Class B.
Molded Envelope:
0.100" diameter x 0.250" length.

J.W. MILLER CO. Comprehensive Coil Service...
Engineering Assistance • Custom Winding • Environmental Testing
Samples-10 Days/Production Delivery-3 Weeks After Approval

Special Coils

Special 16 Pi/30 KV windings for oil-filled high voltage transformers . . . special coil samples are shipped within 1 to 2 weeks after receipt of order.

Production shipments of special coils begin within 3 weeks after sample approval. Intensive specialization in coil design and manufacture assures excellent performance.

Where space limitations dictate one or more dimensions, Miller engineers will make recommendations to help you obtain optimum performance in your circuit.

Custom wound bobbins are now available in an extensive range of inductance values and current ratings on many standard forms.

Custom Wound Bobbins

Standard Coils

Series 7830 heavy duty filter chokes provide up to 250 uh, carry up to 75 amps; widely used for RFI filters and reducing surge peaks; available from L.A. shelf stock.

RF and IF coils, chokes and filters are carried in stock, in depth, in extensive range of values and ratings, most are available from distributors' shelves at factory prices.

CUSTOM DESIGN

In addition to the comprehensive inductor line, Stanwyck offers the electronic esign engineer a variety of special custom design electronic components. llustrated in this section are examples of Stanwyck capabilities along these lines.

Toroids available from stock

RELAY BOBBIN COILS, HASH CHOKES

RF and IF TRANSFORMERS

The engineering staff at Stanwyck is supported by one of the most modern and fully equipped environmental test laboratories in the industry. Extensive product life testing plus rigid quality control standards result in superior custom design electronic components.

YOKE SPECIALISTS

COMPLETE LINE for every Military and Industrial Purpose in PRODUCTION QUANTITIES or CUSTOM DESIGNED to your specific requirements

- Yokes for ALL types of ⅞", 1", 1⅛", 1½", and 2⅛" neck dia. CRT's - only representative types are shown.
- Special designs for all types of computer and high speed character displays.
- Wide variety of coil impedances in both push-pull and single-ended configurations.
- Most experienced yoke engineers in the industry, plus complete production and testing capability.

MODEL D4499

MICROMETER—CONTROLLED PRECISION COIL ALIGNER

For fast, convenient alignment of yokes and focus coils in (1) ultra precision displays and flying spot scanners, and (2) laboratory research and prototype evaluation. **Exclusive** independent micrometer adjustment of pitch, yaw, horizontal and vertical translation . . . with firm precision locking. **Exclusive** true precision control and exact repeatability, plus rugged construction. For full details request catalog page.

TYPE F20

PRECISION ELECTRO-MAGNETIC FOCUS COILS for ⅞", 1½", 2⅛" and other neck dia. CRT's.

All designed for ultimate focus. Negligible effect on spot size when properly aligned to beam. Static types (all sizes)—low power or high power. Dynamic-static combinations (1½" neck dia.) . . . compact single gap design . . . or double gap design to simplify circuitry by eliminating coupling between static and dynamic coils. Wide range of coil resistances available. For full technical details, request catalog pages. Please specify your CRT and beam accelerating voltage.

TYPE P7

TYPE P8

ANTI-PINCUSHION DEVICES, both PM and EM types

Eliminates CRT geometrical picture distortion. Type P7 permanent magnet anti-pincushion assembly requires no current . . . occupies small space . . . easily adjustable . . . mounts directly on standard yokes . . . available in wide choice of magnet strengths with tight tolerances. Type P8 electromagnetic coil anti-pincushion assembly has very high precision construction . . . allows convenient front panel adjustment. For full technical details request catalog page.

TYPE C4942

Request catalog page

SHIELDED DYNAMIC FOCUS COIL

For sharp focus applications up to 25kv accelerating potential, such as scan converter storage tubes and flat faced high resolution CRT's. Static and dynamic coils combined into a single gap to ease alignment and position. Gap in forward position for superior focus and best image-to-object ratio.

TYPES Y58-Y60-Y62-Y64 for 42°, 52°, 70°, & 90° Deflection Angles

PRECISION STATOR YOKES for 1½" neck dia. CRT's.

High efficiency and accuracy achieved by stator type core which also provides exceptionally low astigmatism and residual magnetism. Push-pull or single-ended coils for time shared sweep displays, character displays and others. Request catalog sheet for full details.

TYPE Y66 Up to 60° Deflection Angle

LARGE I.D. YOKES for 2⅛" neck dia. CRT's.

Single-ended and push-pull designs especially for charactron CRT's to give minimum twisting or distortion of characters. Suitable also for precision displays with other types of 2⅛" neck dia. CRT's. Request catalog sheet for full details.

TYPES V21 & V22

VIDICON YOKES & FOCUS COILS for 1" Vidicons

IN VOLUME PRODUCTION NOW. For both commercial and military applications. Engineering Service available. Special designs for all types of 1" vidicons including electrostatic focus magnetic deflection types. For full technical details request catalog page.

TYPE Y25-R Series Up to 52° and 70° Deflection Angles

COMPACT ROTATING COIL YOKES for 1½" neck dia. CRT's

For Radar Plan Position Indicator and all other rotating coil applications. Versions available with dc off-centering coils. Complete in aluminum housing containing deflection coil, slip rings and brush assembly, drive gear and bearing for easy installation into any equipment design. Only 3¾" OD x 2 11/16" long. For technical details request catalog page.

TYPE Y65 Up to 70° Deflection Angle

ENCAPSULATED MINIATURE PRECISION YOKE for ⅞" or 1" neck dia. CRT's.

Push-pull and single-ended coils available in a wide range of inpedances for transistor drivers or vacuum tube circuits. Features electrically balanced windings with equal deflection sensitivities. Close angular tolerances of the display are achieved by precise construction. Epoxy encapsulated to withstand extreme environments. For full technical details, request catalog page.

TYPES C3287/C3528

MAGNETIC SCAN-CONVERTER DEFLECTION YOKES

Stator Design for standard 1½ inch neck diameter scan converter storage tubes. High resolution, geometrical accuracy and sensitivity are combined to offer power savings, plus ultimate performance. A desirable short precision magnetic field is achieved by combining short overall length and small ears with the proper distribution, insertion and extreme care in construction. Magnetically shielded designs also available. Request catalog sheet for full details.

MINI-L HERMETICALLY SEALED R.F. INDUCTORS — TG, TH SERIES

Series	A
TG	.390
TH	.350

DIMENSIONS

TG SERIES

- DESIGNED TO MEET THE REQUIREMENTS OF MIL-T-27B, GRADE 4, CLASS R.
- FREQUENCY RANGE: 10 to 500 KHz.
- INDUCTANCE RANGE: 1 to 500 mh.
- INDUCTANCE TOLERANCES: ±5%.
- INDUCTANCE STABILITY: ±2% (−20°C to +85°).

TH SERIES

- DESIGNED TO MEET THE REQUIREMENTS OF MIL-C-150305C, GRADE 1, CLASS O.
- FREQUENCY RANGE: 100 KHz to 10 KHz.
- INDUCTANCE RANGE: 10 to 1000.
- INDUCTANCE TOLERANCES: 10 uh through 33 uh ±10%, 39 uh through 130 uh ±5%, greater than and including 150 uh ±3%.
- INDUCTANCE STABILITY: ±2% (−20°C to +85°C).

- HERMETICALLY SEALED, HIGH "Q" INDUCTOR IN A TO-5 TRANSISTOR CONFIGURATION.
- LOW EXTERNAL MAGNETIC AND ELECTROSTATIC FIELD.

Part No.	Inductance (uh)	Inductance Test Freq. (KHz)	"Q" Min.	"Q" Test Freq. (KHz)	DCR Max. (ohms)	Min. SRF (MHz)	DC Curr. (ma)

MINI-L ENCAPSULATED R.F. INDUCTORS — TA, TF, TB & TD SERIES

DIMENSIONS

Series	A	B	C	D	E	Max. Power
TA	.225	.210	.110	.100	.020	0.2 Watt
TB	.300	.280	.160	.200	.025	0.33 Watt
TD	.390	.390	.197	.200	.025	0.5 Watt
TF	.225	.210	.110	.100	.020	0.2 Watt

TA SERIES

- MIN. "Q": 60 to 70.
- INDUCTANCE RANGE: 1 to 10 uh.
- FREQUENCY RANGE: 1 to 50 mcs.
- INDUCTANCE TOLERANCES: Less than 1.0 uh, ±10%. Greater than or equal to 1.0 uh, ±5%. Closer tolerances available by special request.
- INDUCTANCE TC: +50 PPM/°C maximum.
- MAXIMUM POWER DISSIPATION: 0.2 watt.

TF SERIES

- MIN. "Q": 60 to 80.
- FREQUENCY RANGE: 20 to 300 mcs.
- INDUCTANCE RANGE: .01 to 1 uh.
- INDUCTANCE TOLERANCES: Less than 0.1 uh, ±20%. Greater than or equal to 0.1 uh, ±10%. Closer tolerances available by special request.
- INDUCTANCE TC: +200 PPM/°C maximum.
- MAXIMUM POWER DISSIPATION: 0.2 watt.

TD SERIES

- MIN. "Q": 40 to 80.
- INDUCTANCE RANGE: 100 to 10,000 uh.
- RECOMMENDED FREQUENCY RANGE: 50 kcs to 10 mcs.
- INDUCTANCE TOLERANCE: ±5%. Closer tolerances available by special request.
- INDUCTANCE TC: From +60 PPM/°C, maximum to +300 PPM/°C maximum, depending upon inductance value.
- MAXIMUM POWER DISSIPATION: .50 watt.

TB SERIES

- MIN. "Q": 50 to 80.
- RECOMMENDED FREQUENCY RANGE: 50 kcs to 35 mcs.
- INDUCTANCE RANGE: 10 to 1,000 uh.
- INDUCTANCE TOLERANCE: ±5%. Closer tolerances available by special request.
- INDUCTANCE TC: From +60 PPM/°C maximum to +300 PPM/°C maximum, depending upon inductance value.
- MAXIMUM POWER DISSIPATION: .33 watt.

- DESIGNED TO MEET THE REQUIREMENTS OF MIL-C-15305C, GRADE 1, CLASS B (−55°C to +125°C).
- DIELECTRIC WITHSTANDING VOLTAGE: 700 volts rms.

MINI-ENCAPSULATED R.F. INDUCTORS — TE, & TJ SERIES

Series	A
TE	.200
TJ	.100

DIMENSIONS

- DESIGNED TO MEET MIL-C-15305C, GRADE 1, CLASS B (−55°C to +125°C).
- INDUCTANCE VALUES: 0.10 mh to 220.0 mh.
- FREQUENCY RANGE: 25 KHz to 2.5 MHz.
- DIELECTRIC WITHSTANDING VOLTAGE: 500 volts rms.
- RATED TEMPERATURE RISE: 35°C at an ambient temperature of 90°C.
- LEADS: Tinned Copper. Weldable leads available by special order.

Part No.	Inductance Ref. @ 1KHz (mh)	Min. "Q"	Test Freq. (KHz)	Min. SRF (MHz)	Max. DCR (ohms)	DC Curr. (ma)

MINI SHIELDED R.F. INDUCTORS — SB, RA, RB, & RC SERIES

- DESIGNED TO MEET MIL-C-15305C, GRADE 1, CLASS B.
- BODY MOLDED FOR HIGH RELIABILITY. EXCELLENT RESISTANCE TO IMMERSION, MOISTURE RESISTANCE, VIBRATION AND SHOCK TESTS.
- OPERATING TEMPERATURE EXTREMES FROM −55°C TO 125°C (35°C RISE AT 90°C AMBIENT).
- OPERATION TO ALTITUDES OF 70,000 FEET.
- COLOR CODED PER MIL-C-15305C.
- TINNED COPPER LEADS. WELDABLE LEADS AVAILABLE UPON REQUEST.

Series	Inductance Range (uh)	Power Rating (W)	D	L	AWG Size
RA	.15-1000	.17	.095	.250	24
RB	.15-240	.25	.155	.375	22
SB	.10-100000	.25	.157	.395 ±.020	22
RC	270-1000	.25	.190	.440	22
RD	1100-3600	.40	.215	.560	22
RF	3900-10000	.45	.240	.740	20
RG	47-150	.30	.250	.560	22
RH	1.2-120	.33	.280	.900	21

TORWICO ELECTRONICS — TOROIDAL INDUCTORS

TWC Series

"Q" Standard inductance values 1.0 MH - 6.0 H

A. DC resistance (nominal) = 280 ohms/henry
B. DC current (ma) for 5% decrease in L = $\frac{135}{\sqrt{mh}}$
C. Maximum AC current (ma) = $\frac{372}{\sqrt{mh}}$

"Q" Standard inductance values 1.0 MH - 4.0 H

A. DC resistance (nominal) = 520 ohms/henry
B. DC current (ma) 5% decrease in L = $\frac{210}{\sqrt{mh}}$
C. Maximum AC current (ma) = $\frac{424}{\sqrt{mh}}$

"Q" Standard inductance values 1.0 MH - 500 MH

A. DC resistance (nominal) = 1100 ohms/henry
B. DC current (ma) for 5% decrease in L = $\frac{340}{\sqrt{mh}}$
C. Maximum AC current (ma) = $\frac{453}{\sqrt{mh}}$

TWS Series

"Q" Standard inductance values 5.0 MH - 30 H

A. DC resistance (nominal) = 135 ohms/henry
B. DC current (ma) for 5% decrease in L = $\frac{320}{\sqrt{mh}}$
C. Maximum AC current (ma) = $\frac{708}{\sqrt{mh}}$

"Q" Standard inductance values 5.0 MH - 20 H

A. DC resistance (nominal) = 255 ohms/henry
B. DC current (ma) for 5% decrease in L = $\frac{380}{\sqrt{mh}}$
C. Maximum AC current (ma) = $\frac{790}{\sqrt{mh}}$

"Q" Standard inductance values 1.0 MH - 500 MH

A. DC resistance (nominal) = 630 ohms/henry
B. DC current (ma) for 5% decrease in L = $\frac{420}{\sqrt{mh}}$
C. Maximum AC current (ma) = $\frac{822}{\sqrt{mh}}$

TWM Series

"Q" Standard inductance values 10 MH - 40 H

A. DC resistance (nominal) = 60 ohms/he
B. DC current (ma) for 5% decrease in L = 5
C. Maximum AC current (ma) = $\frac{1300}{\sqrt{mh}}$

"Q" Standard inductance values 10 MH - 40 H

A. DC resistance (nominal) = 115 ohms/henr
B. DC current (ma) for 5% decrease in L = 55
C. Maximum AC current (ma) = $\frac{1415}{\sqrt{mh}}$

"Q" Standard inductance values 5 MH - 500 MH

A. DC resistance (nominal) = 250 ohms/henry
B. DC current (ma) for 5% decrease in L = 880
C. Maximum AC current (ma) = $\frac{1548}{\sqrt{mh}}$

TORWICO ELECTRONICS INC. LAKEWOOD, N.J.

TORWICO ELECTRONICS

TOROIDAL INDUCTORS

TWI Series

"Q" Standard inductance values 10 MH - 45 H

A. DC resistance (nominal) = 45 ohms/henry
B. DC current (ma) for 5% decrease in L= $\frac{715}{\sqrt{mh}}$
C. Maximum AC current (ma) = $\frac{1500}{\sqrt{mh}}$

"Q" Standard inductance values 10 MH - 20 H

A. DC resistance (nominal) = 94 ohms/henry
B. DC current (ma) for 5% decrease in L= $\frac{900}{\sqrt{mh}}$
C. Maximum AC current (ma) = $\frac{1644}{\sqrt{mh}}$

TWD Series

"Q" Standard inductance values 10 MH - 50 H

A. DC resistance (nominal) = 27 ohms/henry
B. DC current (ma) for 5% decrease in L= $\frac{1100}{\sqrt{mh}}$
C. Maximum AC current (ma) = $\frac{2000}{\sqrt{mh}}$

"Q" Standard inductance values 10 MH - 35 H

A. DC resistance (nominal) = 54 ohms/henry
B. DC current (ma) for 5% decrease in L= $\frac{1200}{\sqrt{mh}}$
C. Maximum AC current (ma) = $\frac{2264}{\sqrt{mh}}$

TWL Series

"Q" Standard inductance values 20 MH - 75 H

A. DC resistance (nominal) = 21 ohms/henry
B. DC current (ma) for 5% decrease in L= $\frac{1450}{\sqrt{mh}}$
C. Maximum AC current (ma) = $\frac{3100}{\sqrt{mh}}$

"Q" Standard inductance values 20 MH - 50 H

A. DC resistance (nominal) = 35 ohms/henry
B. DC current (ma) for 5% decrease in L= $\frac{1700}{\sqrt{mh}}$
C. Maximum AC current (ma) = $\frac{3290}{\sqrt{mh}}$

HOW TO ORDER

Order these standard inductors by their part number.

Example: **TWC100MHOE**

TWC	100MH	0	E
(1)	(2)	(3)	(4)

(1) Size: TWC, TWS, TWM, TWI, TWD, TWL

(2) Inductance:

Use MH—for millihenry designation below 1.0 henry
H—for henries above 1.0 henry

(3) Frequency Range: 0, 1, 2

(4) Packaging: U—Open Coil E—Encapsulated C—Steel Cased

GENERAL SPECIFICATIONS

Tolerance—The tolerance on standard inductors is ± 1%

Test Level—Standard inductors are adjusted at 1.0 volts, 1000 cps

Maximum Voltage—The maximum voltage across standard inductors shall be 115 VRMS

Insulation Resistance—10,000 megohms minimum, except for open coil versions which shall be 1,000 megohms minimum

Standard Torwico Inductors are designed to meet the following MIL-T-27 requirements:

Open Coil—Grade 6, Class S, Life Expectancy X
Military Designation: TF6SX04ZZ

Encapsulated—Grade 5, Class S, Life Expectancy X
Military Designation: TF5SX04ZZ

Steel Cased—Grade 4, Class S, Life Expectancy X
Military Designation: TF4SX04YY

ELECTRIC WAVE
FILTERS

Almost forty years of experience in the design and production of electric wave filters have resulted in UTC being a first source for top quality, reliability and advanced engineering . . . for both special and stock applications. Present designs incorporate a wide variety of core structures, winding methods, and capacitors to provide maximum performance. Stability and reliability. Military (to MIL-F-18327C) and industrial types are available both metal cased and molded. Range of frequencies is from DC to 30 MHz.

HIGH Q
INDUCTORS

Almost four decades of specialization in high Q coils are reflected in the permalloy dust toroid, ferrite, and laminated structures produced by UTC today. The foremost engineering staff of its type is supported by the most modern, fully equipped materials and test laboratories. In addition, extensive life testing and rigid quality control standards create the top quality and highly reliable components associated with the UTC name. Metal cased and molded units are engineered to specifications or available from stock. Inductors ranging in applications from DC to 30 MHz, both military (to MIL-T-27C) and commercial types, are available, offering maximum Q for minimum size.

POWER
INDUCTORS

UTC's capabilities in range run from fractions of micro-henries to many thousands of henries, limited only by the physical size of the unit. Almost forty years of specialization in the design and production of iron core components have resulted in UTC being a first source of supply for difficult units. Military (to MIL-T-27C) and commercial types are available in all standard UTC case configurations, plus units to your specifications. Metal cased, molded, encapsulated, open, and potted units of the highest quality and reliability are available. The largest engineering staff of its kind is supported by the most modern, fully equipped materials and test laboratories. In addition, extensive life testing and rigid quality control measures assure the advanced designing and high reliability associated with UTC products.

MITE SERIES ELECTRICALLY VARIABLE INDUCTORS

Fig. 9 Typical Vari-L circuits

The **Vari-L Inductor** consists of a high-Q coil wound on a ferromagnetic core, and an electromagnetic element for controlling its inductance. The coil is connected into an oscillator, amplifier or filter, along with suitable capacitance to establish the initial parameters; current in the control winding will then do the tuning. The rate of control can be slow for semi-fixed operation — or fast, up to several thousand Hz, for sweep or frequency modulation. The control current is usually in the milliampere range, or can be made higher to fit special applications.

The component is entirely solid-state, with no moving parts to get out of adjustment or wear out, so it can safely be located remote from the control point or potted as part of your own intricate sub-assembly.

Vari-L tuning has been in use for 15 years in numerous industrial instruments, and in critical military applications including outer space and oceanography. It is a natural for such sweep services as TV-alignment generators, spectrum analyzers, and panoramic receivers; but it is also chosen frequently because of its non-mechanical advantages such as remote control, sub-miniaturization, or automatic (closed-loop) tuning.

The **"MITE"** Series described below was brought out to keep step with the trend toward printed circuits and smaller equipment; but we also make larger units for high-power circuits or multi-function service.

We will quote promptly on your special requirements. Applicable bulletin: 167

Z-MATCH

WIDEBAND R.F. CHOKE

Fig. 10 Choke outline drawing

An RF choke for VHF-UHF circuitry should present a constant high impedance over a wide band of frequencies and should be non-lossy. Ordinary chokes made by winding a few turns of wire on a powdered iron or ferrite core do not fulfill this requirement because their impedance peaks sharply, and even though the actual resonance is placed outside the band the high order of impedance change over the band can be troublesome.

The chokes described below have very low loss, are virtually non-resonant and have a constant impedance over a very wide range of frequencies. They all have DC resistance of less than .1 ohms and will handle up to 2 amperes of current. Despite their small size they are suitable for use in high-power transistor oscillators and amplifiers, where they serve as RF isolators in the DC supply. Additional applications which have been tested and are diagrammed in Figure 12 are:

A. DC isolation in wide band circuits employing Z-Match transformers.

B. RF decoupling.

C. Transient and RFI suppression.

D. DC burnout protection.

Price, 1-9, Models WC-1, WC-2, WC-3, WC-4: $10.50 each. Generous quantity discounts.

ADC Bantam Jack Panels

Bantam Jack Panels are designed to satisfy the increasing demand for more compact patchfields in modern electronic and communication equipment. Bantam Jack Panels, with miniaturized jacks, provide twice the number of jacks in a standard size panel. They require only ½ the rack space previously used by conventional panels. The new panel assemblies weigh 65% less when compared to an assembly using an equivalent number of jacks on a conventional jack panel. ■ Bantam Jack Panels are compact, lightweight, and yet provide the same dependable service as the long established telephone types. This new design offers 96 jacks (48 pairs) in a 1¾ inch x 19 inch standard sized panel. The jacks on this panel are spaced to prevent the cross patching of adjacent circuits when using double plugs.

specifications

1. **Panel:** Aluminum alloy, extruded. Finished black anodized per Mil-A-8625A. Overall dimensions 1¾"x19"—Standard EIA mounting centers.
2. **Jack Mounting:** Four moulded plastic inserts, each provides for 24 jacks. Pairs of jacks on 5/16 inch centers. Double-row panel provides 96 jacks total. Blank inserts can be furnished where only single row of jacks is required.
3. **Designation Strip:** Extruded clear plastic.
4. Panel assemblies are available with a wide variety of two and three-conductor jacks. See listing of Bantam jacks for complete details.

PJ-731	Double row panel, assembly less jacks, holds 96 jacks.
PJ-737	Double row panel, with 48 pair (96 total) PJ-818 jacks.
PJ-739	Double row panel, with 48 pair (96 total) PJ-839 jacks.
PJ-724	Panel inserts, less jacks, 24 holes.
PJ-700	Panel inserts, blank (same as PJ-724 without holes).
PJ-736*	Double row panel, with 104 PJ-818 jacks.
PJ-738*	Double row panel, with 104 PJ-839 jacks.

*Panels with 104 jacks (26 per insert, jacks all on 5/16 inch centers) are available on special order.

Custom panel assemblies with up to 104 jacks are available on special order.

PJ-724 PANEL INSERT

Bantam Triple Row Jack Panel

Bantam Triple Row Jack Panels provides 144 jacks in a 2⅝ inch x 19 inch size panel. The specification and construction of this panel is the same as Bantam Double Row Panels except width of panel is one and one-half the standard panel size. Mounting centers conform to standard EIA rack spacing. Three rows of jacks with 48 jacks in each row. These three rows are particularly desirable for use in 2 wire and 4 wire VF Circuit applications where space can be saved by having three verticle jacks appear as a jack set. When needed number plates or labels to show row functions can be furnished on special order.

"BANTAM TRIPLE ROW JACK PANEL — 2⅝" WIDE"

BANTAM TRIPLE ROW JACK PANEL

PJ-732	Triple Row Panel Assembly, less jacks, holds 144 jacks
PJ-733	Triple Row Panel, with 144 PJ-818 Jacks
PJ-734	Triple Row Panel, with 144 PJ-839 Jacks
PJ-735	Triple Row Panel, with 96 PJ-839 Jacks (top and middle row) 48 PJ-838 Jacks (bottom row).

Bantam 2 + 1 Jack Panels

Bantam 2 + 1 Jack Panels are the newest development in the ADC line of Bantam components which offer the maximum in patching density. These unique three row panels feature three miniature jacks on a single frame, which effectively requires ⅓ less space than regular Bantam jacks. The Bantam 2+1 panels include 48 of these three conductor jacks, in a standard size 1¾ inch wide by 19 inch long panel. These panels were especially designed to provide vertically positioned jack sets such as the "Line", "Equipment" and "Monitor" jacks in a Voice Frequency Circuit. The Bantam 2 + 1 Jacks provided in these panels are available with solder type terminals and with wire wrap terminals. When required number plates or labels for identifying row functions can be provided on special order.

ADC PRODUCTS
4900 W. 78th St., Minneapolis, Minn. 55435

Bantam Jacks

Bantam Jacks will meet the electrical, mechanical and environmental requirements of the military specification for long frame telephone jacks. Although reduced in size these jacks will provide the same reliable service equal to that expected from regular size telephone jacks. These jacks are available in a variety of two and three conductor types, with isolated circuit contacts as well as normalling contacts.

FOR COMPLETE LINE OF BANTAM LITES, SWITCHES, ACCESSORIES, SEE ADC COMMUNICATIONS COMPONENTS CATALOG.

2 CONDUCTOR JACK

3 CONDUCTOR JACK

Specifications

Frame: Steel, Cadmium plate with chromate conversion coating to withstand 50 hours of salt spray.
Springs: Nickel silver.
Contacts: W. E. #1 gold alloy, cross-bar contacts are welded to springs.
Insulation: Spacers, Phenolic Type PBE-P per MIL-P-3115B.
Bushing: Brass, silver soldered to frame. Finish same as frame.

All of the above jacks are available on special order with Palladium cross-bar contacts.
If gold plating is required for all surfaces, jacks should be ordered as the PJ number with a "G" suffix. ADC uses .00005 gold per MIL-G-45204, TYPE II. The solder lugs are not tinned for gold plated jacks. Any requirements other than those described require special notation.

Bantam Twin Jacks

Bantam Twin Jacks are the miniature equivalent of the ADC PJ-482 or the WE 482A. These three conductor type jacks have normal contacts on both tip and ring springs strapped, thereby reducing and simplifying wiring. The Bantam Twin Jacks are designed with sleeves on .796 inch centers and are made to mount in the ADC PJ-731 Double Row Panels and the PJ-732 Triple Row Panels. Bantam Twin Jacks are available with solder terminals and wire wrap terminals.

SCHEMATIC

PJ-882 Bantam Twin Jack — Solder Terminals

PJ-882W Bantam Twin Jack — Wire Wrap Terminals

Bantam 2 + 1 Jacks

Bantam 2 + 1 Jacks offer almost unbelievable space saving advantages . . . Savings even greater than regular Bantam jacks. Bantam 2 + 1 Jacks literally permits tripling of the patching density of a 1¾ inch wide panel. This unique design features three jacks on a single frame. The jacks are three conductor types. Two of the jacks have normal contacts on both tip and ring springs. These normal contacts are strapped to simplify wiring. Ideally suited to VF Circuit applications where two of the jacks would function as "Line" and "Equipment" jacks and the third as a "Monitor" jack. Up to 48 Bantam 2 + 1 Jacks can be mounted on a 1¾ inch wide by 19 inch long panel. Bantam 2 + 1 Jacks are available with solder type terminals and with wire wrap terminals. These very remarkable miniature jacks are specifically designed to mount in the Bantam 2 + 1 Panel PJ-721.

SCHEMATIC

PJ-821 Jack (Solder Terminals)

PJ-821W (Wire Wrap Terminals)

ADC Bantam Patch Cords

Bantam Patch Cords are plastic jacketed, shielded cords complete with molded-on plugs. The plugs are made with molded insulation between conductors. Bantam Patch Cords are available with single and double two and three conductor plugs. A cord strain relief feature is included in the plug construction.

Bantam plugs may be gold plated on special order per MIL-G-45204, Type II, .00005 inches thick.

60 inch	PJ-770

specifications

Cord: Plastic jacketed, stran d copper conductors, braided shi l. Jacket color — gray.

Plugs: Conductor parts are br , finished to 32 microinch finish m- mum.

Plug Insulation: Molded polystyre

Internal Connections: Soldered.

Plug Shell: Plastic, gray, flexi thermoplastic.

Patch Cords

ADC Patch Cords have become standards in the communications industry. The heavy Nylon braided jacket excels in abrasion resistance. All cords have been designed to give the ultimate combination of durability, flexibility and reliability. ADC has numerous combinations of special cord assemblies using virtually every plug combination required. You are invited to submit your requests or requirements for quotations.

PATCH CORD LENGTH	TOLERANCE
6 inch	+ .375" —.00"
1 foot	+ .75 " —.00"
2 feet	+1.125" —.00"
3 feet	+1.375" —.00"
4 feet	+1.625" —.00"
5 feet	+2.0 " —.00"
6 feet	+2.25 " —.00"
10 feet	+2.625" —.00"

NOTES

1. Patch cord lengths are measur from backs of plug shells.
2. When outer jacket colors other th noted are required add suffix:
   S — For Slate G — For Gre
   R — For Red B — For Blac
3. All cords and cord assemblies w withstand 500 V, 60 Hz PBT betwe all conductor. Cordage is designed have minimum leakage resistance 50 Megohms with 100 volts applie

2 CONDUCTOR SHIELDED, CORD ASSEMBLIES

Length	Cord w/ PJ-1 Plugs	Cord w/ PJ-055B Plugs	Replacement Cords Only
6 inch	PJ-10½	PJ-50½	PJ-20½
1 foot	PJ-11	PJ-51	PJ-21

3 feet	PJ-173	PJ-93
4 feet	PJ-174	PJ-94
5 feet	PJ-175	PJ-95
6 feet	PJ-176	PJ-96

The PJ-90 and PJ-170 series cords provide four tinsel wire conductors, plus a shield common to both sleeves on the plugs. Standard color for these cords is black. They are also available in slate, green or red on special order. See Note 2.

ADC Plugs

TWO CONDUCTOR

PJ-1 — Equivalent WE-241. Heavy duty die cast frame. Black phenolic shell. Has self-aligning plug sleeves on 5/8" centers for use with all standard jack panels. Two tip conductors, plus sleeve connection common to both sleeves.

PJ-047R — Equivalent WE-347. Designed for use with tip and sleeve jacks. Molded insulation, red plastic handle, design and construction in accordance with MIL-P-642B specifications.

PJ-047B — Same as above except black plastic handle.

PJ-055B — Formerly ADC PJ-5, fits 1/4" phone jacks. Black plastic shell. Screw terminals, designed and manufactured in accordance with MIL-P-642B.

PJ-055M — Same as above except has metal handle, brass, nickel plated.

PJ-055R — Same as above except has red plastic handle.

PJ-327 — Equivalent WE-327. Twin plug provides two electrically independent 2 conductor plugs in a black phenolic shell which is notched to indicate polarity. Self-aligning plug sleeves are on 5/8" centers. Designed and constructed in accordance with specification MIL-P-642B.

D7200 — Equivalent WE-315B. Four sleeves, self-aligning plug. Molded insulation. Brass shell notched for polarity is nickel plated and connected to plug sleeves to provide shielding for tip conductors. For use with four PJ-318 double jacks mounted on 5/8" centers. Five conductors total.

THREE CONDUCTOR

PJ-2 — Equivalent WE-291A. Designed for use with 1/4" diameter tip, ring and sleeve jacks. Especially designed cone-shaped tip to prevent momentary shorting of tip and ring conductors when used with ADC PJ-339, WE-239A or similar three circuit jacks.

PJ-4 — Looping plug, dual three conductor type. Same conductor configuration as PJ-051 except has conductors wired internally, tip to tip, ring to ring and sleeve to sleeve. Black plastic shell.

PJ-6 — Equivalent WE-213. Designed for applications requiring two separate 3 conductor circuits. Popularly used with operator's intercom/monitor headsets. Black shell notched for polarity identification. Self-aligning plug on 1 1/16" centers. (**Note:** Not intended for use with standard jack panels where jacks are mounted on 5/8" centers.)

PJ-7 — Equivalent WE-425. Twin type plug with tip, ring and sleeve conductors on 5/8" centers for use with all standard jack panels. Designed to mate with three conductor jacks having 1/4" diameter sleeves. Molded insulation. Black phenolic shell is notched to indicate polarity.

PJ-8 — Dual three conductor type with same conductor configuration as PJ-2, designed for non-shorting of tip and ring circuits when used with PJ-339, WE-239A or similar jacks. Black plastic handle notched to indicate polarity.

PJ-9 — Equivalent WE-338. Designed for applications requiring two separate 3 conductor circuits. Will mate with three-conductor jacks having 1/4" diameter sleeves. Molded insulation, black plastic handle notched to indicate polarity. Self-aligning plug sleeves on 5/8" centers. Has two separate cord entry holes and requires "Y" type cord or two separate cords.

PJ-051R — Equivalent WE-310. Formerly ADC PJ-3. Designed for use with 1/4" tip, ring and sleeve jacks. Molded insulation, red plastic shell, three conductor. Is in accordance with MIL-P-642B.

PJ-051B — Same as above except black plastic handle.

PJ-309 — Equivalent WE-309. Three conductor type. Has .207 diameter sleeve (small diameter). Intended for use with ADC PJ-246, PJ-249 and similar three circuit jacks which have .210 I.D. sleeves. Molded insulation — red plastic handle. Designed and constructed per MIL-P-642B.

FOR COMPLETE LINE OF COAXIAL PLUGS, SEE ADC COMMUNICATIONS COMPONENTS CATALOG.

(ADC) Jacks

TELEPHONE TYPE

ADC is recognized as a leading supplier of long frame, telephone type jacks. As evidence of their outstanding quality, ADC jacks are used by the country's foremost manufacturers of communication equipment. The unique, ADC one-piece frame is strong, dimensionally stable and readily interchangeable both mechanically and electrically with commonly used jacks. Plating withstands 50-hour salt spray tests. W. E. #1 gold alloy contacts are welded to nickel silver springs. Lugs are hot tin dipped. Insulation is high grade phenolic.

TWO CONDUCTOR

THREE CONDUCTOR

THREADED SLEEVE AVAILABLE ON SPECIAL ORDER

SPECIFICATIONS:

Frame: Steel, plated to withstand 50 hours salt spray per Mil-STD-202, Method.
Sleeve: Brass, nickle plated.
Springs: Nickle silver with tinned lugs.
Insulators: Phenolic, per Mil-P-3115 B type.

*For use with PJ-309 or other similar type plugs having .207" di sleeves.

**Caution — Because of Stack Height these "A" frame jacks can installed on 5/8" centers. "C" Frame version if not listed can be fur on special order.

TWIN JACKS

ADC Twin Jacks are essentially two jacks wit common mounting frame. Jack sleeves are on 3/8" centers for vertical mounting in standard jack p els. Normal springs are cross-connected or strap Jack sleeves are brass, nickel plated. Die for springs are nickel silver. Frame and hardware steel, cadmium-chromate plated to withstand hours salt spray.

ADC Jack Panels

ADC fers the most complete assortment of jack panels avail e today. ADC panels are used in television and broad sting stations, recording studios, industrial paging syste , and communication equipment of all kinds where there s a need to efficiently switch and distribute audio signa Molded of solid phenolic, reinforced with steel to provi maximum rigidity and strength. Jacks are spaced to pe nit use of any standard double plug with ⅝" spacing. ounting brackets and designation strips* furnished with each panel. All panels designed to fit standard 19" relay rack. Consult ADC for your standard and special jack panel requirements.

*The jack panels as illustrated are equipped with ADC standard designation strips as shown. PJ-30, PJ-35, PJ-36 and PJ-37 type panels can be supplied with the reinforcement strips drilled and tapped to accommodate the Western Electric equivalent designation strips (PJ-899A, PJ-899B, PJ-903A and PJ-903B). The suffix "A" added to the part number denotes panels which are modified to accommodate these alternate type designation strips. Designation strips are to be ordered separately.

SPECI ATIONS

Panels: ded, thermoset plastic per Mil-M-14F, Type CFG, black.
Mounting Brackets: PJ-31 and PJ-33: Die cast zinc, finished black lacquer. PJ-30, PJ-35, PJ-36, PJ-37: Steel, finished cadmium + chromate per Mil-F-14072 #M262, Type II.
Reinforcing Strips: PJ-31 and PJ-33: Steel, finished nickel plated. PJ-30, PJ-35, PJ-36, PJ-37: Steel, finished cadmium + chromate per Mil-F-14072 #M262, Type II.

PJ-30
Double Panel. Holds 52 jacks — requires 1¾" panel space. Double designation strip. Brackets for flush rack mounting. All jack mounting holes on ⅝" centers.

PJ-31
Double Panel. Holds 48 jacks. Holes are spaced to prevent patching adjacent circuits. Requires 2⅛" panel space.

PJ-33
Single Panel. Holds 24 jacks. Holes are spaced to prevent patching adjacent circuits. Requires 1¾" panel space.

FOR LAMP SOCKET AND CAPS, ADC COMMUNICATIONS COMPONENTS CATALOG.

PJ-35 Same as PJ-30, except has 7" standoff mounting brackets.

PJ-36
Single Panel. Holds 26 jacks — requires 1¾" panel space. Brackets for flush rack mounting. All jack mounting holes on ⅝" centers.

PJ-37
Triple - Row Panel. Holds 78 jacks. Requires 2⅝" panel space (1½" standard rack spaces). Provided with brackets for flush rack mounting and PJ-901 designation strips top and bottom.

HOLE PLUG
Molded of black polyethylene plastic. Fits all ADC standard jack panels. Made to plug unused jack mounting holes in jack panels. **PJ-29**

Molded Terminal Blocks 20 pin

Kn wn for their ruggedness, ADC "Christmas Tree" Terminal Blocks have become standards in the Broadcast and Telecommunications Industries. The ADC 20-Pin Terminal Blocks are molded of durable, black, thermo-set plastic per Military specifications MIL-M-14F. Terminals are brass with a tin alloy plating for lasting solderability (see specifications below for details on solderability). The PJ-101 series blocks have terminals graduated in length for ease of wiring. The Figure 2 solderless terminals as furnished on the PJ-161 series blocks are designed to accommodate AMP No. 60197-1 Connectors as supplied by American Micor, Inc. or may be used as regular solder terminals. ADC Terminal Blocks are numbered along the top row for easy terminal identification.

FIG. 1
Solder Type
Mat'l. .040 Thick

FIG. 2
Solderless or Solder.
Mat'l. .032 Thick

SPECIFICATIONS

Terminals: Brass, Tin alloy plated.

Molded Strips and Base: Black Thermoset plastic per MIL-M-14F, Type CFG.

Mounting Strip: Steel, Cadmium-Chromate per MIL-F-14072, #M262, Type II.

Current Carrying Capacity: 5 Amperes.

Insulation Resistance: 1000 Megohms Min.

Dielectric Strength: 2500 V RMS 60 Hz. between terminals.

Solderability: Per MIL-STD-202C, Method 203A Initial: Excellent (over 95% coverage).

After 49 hours salt spray per MIL-STD-202C. Method 1013: good (90% coverage).

After 240 hours conditioning at +150°F and 95-98%. Relative Humidity: excellent.

After 90 days storage at room temperature: excellent.

FOR WRAP TERMINAL BLOCK OR 26-PIN BLOCKS, SEE COMPLETE ADC CATALOG.

HIGH VOLTAGE LEAD ASSEMBLIES AND RECEPTACLES

The CAPITRON Division of AMP Incorporated is the leading manufacturer of high voltage, high altitude, high temperature lead assemblies and receptacles. Custom pre-engineered LGH*high voltage connector products incorporate the advantages of miniaturization and lightweight, and are ideal where reliability and peak performance are essential to the application. They are the result of continuing research and development activities in the connection of high voltage power supplies, modulators, pulse forming networks, high voltage transformers, magnetrons, klystrons, traveling wave tubes, and cathode ray tubes.

GENERAL FEATURES OF LGH COMPONENTS

- Lightweight, space saving, safe
- Wide temperature range: −55° C to +125° C (−67° F to +257° F)*
- Voltage ratings: to 50,000 volts DC†
- Easy to install—no tools needed
- Insulation: extruded silicone rubber
- Receptacles: ceramic or glass epoxy
- Quick disconnect
- High dielectric and mechanical strength
- Hermetically sealed and corona-resistant
- High altitude operation: up to 70,000 ft. without derating
- Meet applicable mil. specs. for shock and vibration resistance
- RFI shielding optional

*Higher temperature components up to +200°C (+392°F) on request

†Special designs to 200,000 volts DC on request

NOTE: See other CAPITRON High Voltage products under Catalog Sections 2100 and 4000.

Sizes and Ratings Available

TYPE	DC VOLTAGE Rating**	CURRENT RATING**
LGH ½	6,000	10 amps DC
LGH ½ L	12,000	10 amps DC
LGH 1	12,000	10 amps DC
LGH 1 L	25,000	10 amps DC
LGH 2	25,000	10 amps DC
LGH 3	35,000	10 amps DC
LGH 4	50,000	10 amps DC

**Peak AC and peak pulse voltage ratings will be somewhat less than DC ratings. Current rating is limited to 7.5 amps AC rms, 60 cycles.

Write on your letterhead for our LGH products catalog

ERMETIC CONNECTORS UP TO 150,000 VOLTS D.C.

JH* Connectors eliminate glass or ceramic insulators

10 PIN CONNECTOR

25,000 Volts D.C. center conductor and 9 low voltage pins

15,000 Volts D.C. Bulkhead Connector

5 PIN CONNECTOR

40,000 Volts D.C. Solder or "O" Ring Mounting

eatures:

- Safe—no exposed high voltage parts
- Space saving—maximum performance from the minimum size and weight
- Color coded for easy identification
- Fast connect and disconnect
- Wide temperature range (–55°C to +125°C)
- Positive mating of lead into receptacle
- R F I shielding—optional
- Fungus, moisture, oil, and chemical resistant
- High altitude operation—up to 80,000 feet without voltage derating
- Excellent mechanical strength—resistant to vibration and shock
- High dielectric strength
- Preassembled—no tools required
- High reliability—operates under extreme environmental conditions
- Versatile—top access, splice, or bulkhead application
- Corona resistant—virtually unaffected by ozone or corona
- Radiation resistant
- Lead wire remains flexible from –62°C to +250°C
- Meets applicable military specifications
- Quick, easy installation

Suitable for:

- Industrial & Military Applications
- Power Supplies
- Radar
- Avionic Electronics
- CRT's
- Medical Electronics
- Laser
- Copying Machines
- Instrumentation
- Pulse Applications
- Oceanography

Let us design an assembly that meets or exceeds your requirements. We're the leading maker of customized connectors. Whatever your connection problem contact us today.

A. Coax plus 20. Series WTB right-angle connector for PC boards. Twenty standard plus 3 or 6 coaxial contacts. **B. Series WTB subminiature right-angle connector.** PC board connector for rack or mother board, with .100″ centers, 2 rows, offset .050″. Series features .030″ dia. BeCu contacts. Sizes: 10,14,20,24,26,30, 36,40,44,50,54,56,60,66,70. **C. Series WT subminiature right-angle connector.** Plug, in-line receptacle with .100″ centers, for PC card to mother board or cable, or cable to cable. Series features .030″ dia. BeCu contacts. All sizes: 1 through 22. **D. Series WTA subminiature, rectangular connector.** Plug and receptacle, .100″ centers, 2 rows, offset .050″, for input/output connectors, cable to PC board and cable to panel or cable. BeCu contacts, .030″ dia. Sizes: 10,14,20,24,26,30,36,40,44,50,54,56,60,66,70. **E. Series K and P Connectors.** Series K features crimp, removable contacts with 50-lb. minimum resistance to push-out. Sizes: 18,34,42,50,66,75,104. Series P features soldercup contacts retained in molding. Rugged .0625″ dia. pins. Sizes: 14,20,34,42,50,50-8,66,75,104. Stainless steel shells, mounting plates, split hoods, and environment-proof feature optional on both series. ■ **For details** call 214-357-0274 or write 2618 Manana Road, Dallas, Texas 75220.

MICROPHONE CONNECTORS

AMPHENOL
THE BUNKER-RAMO CORPORATION

V! Excellite© Microphone Plugs & Connectors

w cost, dependable audio-type connector with latchlock ng. Made of sturdy ABS molded plastic with lustrous plating. Excellite connectors resist denting, chipping, g or tarnishing. They are available in cable plugs and receptacles with 3, 4 and 5 contacts.

ures

NOMICAL — Lower initial procurement cost, less downtime for llation, rewiring, field repairs.

HTWEIGHT — Considerable weight savings over comparable die-cast configurations.

ING — Unitized inserts (shell, button and insert are all one assembly) easily removed and feature screw-machined solder cup type contacts quick, efficient termination.

ITIVE GROUND — In all Excellite latchlock-type connectors, contact engages first for use as ground — eliminating chance of accidental trical damage to solid-state equipment or microphones.

ARIZATION — Key on female connector, lock-in keying on male to ent mismating.

SPECIFICATIONS

- **SHELL AND CABLE CLAMP** — Molded plateable grade ABS (acrylonitrile butadiene styrene) with nickel plate over copper finish.
- **INSERT DIELECTRIC** — Molded type 6 nylon.
- **CONTACTS** — Copper alloy, silver plated and chromate dipped. Screw machine design with solder cup termination.
- **CABLE RELIEF** — General purpose 40-60 durometer neoprene rubber.
- **CABLE CLAMP** — Cable clamp and gland accepts commonly used .250" to 0.313" diameter cable.
- **ELECTRICAL CHARACTERISTICS**

	3 Contact	4 Contact	5 Contact
Voltage	133 V (RMS)	133V (RMS)	133V (RMS)
Current	15 A.	10 A.	7.5 A

- **TEMPERATURE RATING** — −20°F to 160°F
- **DIELECTRIC WITHSTANDING VOLTAGE** — 1400 V at 60 Hz for one minute between any two contacts or between any contact and connector shell.

b available in nickel plating. Substitute N for C in part number.

75 Series Single Contact

Standard type used on microphones, amplifiers, speakers, transmitters, etc. Brass machined shells with chrome finish. Threaded coupling and unique button contact permits plugs to be converted to jacks by removal of coupling ring. Receptacles mount in .385" holes when grounding. .500" holes for ungrounded two circuit operation. Spring cord protection for ¼" cable.

Description	Part No.

** Military version available with silver plated contacts and, where applicable, stainless steel mounting plate. Add suffix "M" to catalog number. Example: 77-MIP-8TM.*

 # Bottom mounted, requires 1¼" chassis holes;

Printed Circuit Sockets

Standard socket series 77MIP and 78S of eight or more contacts for mounting directly to printed circuit boards. Luballoy contact tails are ⅛" long and mount through 1/16" diameter holes.

TO ORDER

Add suffix -WO125 to part number, i.e. 77MIP(X)-WO125 or 78S(X)-WO125.

Wire Wrap Sockets

Standard socket series 77MIP and 78S of eight contacts or more have ½" long contact tails for wire wrap termination.

Standard contacts are .016" thick, rated 3 amps for 22 ga. wire. Heavy duty contacts are .025" thick, rated 7.5 amps, for 16 ga. wire.

TO ORDER

Add suffix -WO500 to part number, i.e. 77MIP(X)-WO500 or 78S(X)-WO500 for standard contact. Add WO525 for heavy duty contact.

Compact "MIP" Sockets

Similar to standard MIP, but smaller. 1⅛" mounting ho Two .136" screw holes on 1 5/16" centers. 8 contacts on Phosphor bronze contacts.

88-8	Octal, Black Phenolic
88-8T	Octal Mica Filled Phenolic
88-8TM	Octal Mica Filled Phenolic with silver plated contacts and stainless steel mounting plate
88-8X	Loctal. Black Phenolic

Saddle Type Octal

Octal socket with 4 ground lugs for below chassis mountir an 2 9/64" holes on 1.312" centers for above chassis mou in Black phenolic dielectric.

168-001	Wrap around contacts, Brass
168-015	Tuning fork contacts, Luballoy

Steatite Magnal Socket

49-SS11L	11 contacts for TV or CRT. Retainer ring mounted in 1⅝" chassis hole. 1 1/16" pin circle

Floating MIP Sockets

Foribration-free operation.

77-MIP-8FK	Octal. Complete with 4 rubber grommets, 2 mounting screws, nuts and washers.
77-3K	Kit for making any "MIP" into floating socket. 4 grommets, 2 mounting screws, nuts and washers. MIP screw holes must be enlarged to ¼" diameter.
77-MIP-8F	Socket only. Same as 77-MIP-8, but with ¼" mounting holes.

MIP, Cloverleaf Contacts

59-103	Octal. Same dimensions as standard MIP. Mica-filled phenolic, stainless steel mounting plate, cloverleaf contacts hot tinned dipped.

Plugs*

Phenolic bodies, nickel plated brass contacts. Polarized to e vent mismating. Mate with tube sockets shown on this pe

CP TYPE
Use with plug caps or mount on panel with retainer ring. Same grooves as 78S tube sockets.

REPLACEMENT TYPE
Removable plate.

Lamp Socket

For medium base prefocused lamps. 1000 watts. 110/250 volts, UL approved.

98-8	Phenolic, to 450°F.
98-1	Steatite, to 1800°F.

Relay Sockets/Industrial Tube Sockets

Heavy duty octal socket with barrier-protected screw type terminals. 1250 V RMS at 5 Amps. Two .156 mtg. holes on 1.688 centers. Molded one piece melamine construction.

146-103

Top Mounting		Bottom Mounting
146-103	No Tie Points	146-203
146-104	With 4 Tie Points	146-204

146-817

146-817 (11 contacts) — Melamine dielectric, phosphor bronze contacts with solderless reversible screw terminals. 600 V (RMS) at 10 Amps. Two .156 mtg. holes on 4.187 centers. May be gang mounted.
59-106 (14 contacts) — Mica-filled dielectric, phosphor bronze contacts.
59-470 (20 contacts) — Diallyl phthalate with beryllium copper contacts.

59-470

59-106

SCR Sockets

Three contact receptacle designed to accept General Electric Company's C106 SCR (Silicone controlled rectifier). Nickel silver contacts. Black nylon insulator. Voltage rating: 500 volts (RMS). Current rating: 5 Amps. Contact spacing: .200" centers. Mating engagement depth: .160" min. Contact length: Approximately .323" x .020" square. Contact tails designed for wire wrap or printed circuit board mounting.

77-115	Press fit style without flange. To fit rectangular panel or chassis cut dimensions .335 ±.005" x .1625 ±.0015".
77-116	Molded mounting flange has two .125" diameter mounting holes on .625" centers. Assembly fits out .325" x .200".

Crystal Holder Sockets

Two contacts, 3/4" centers for 1/8" prongs.

33-2	Black Phenolic
33-2	Mica Filled Phenolic

Crystal Boards

Multi-contact crystal boards molded of diallyl phthalate. Accept up to 20 crystals. May be used as compact test panels. Contact accept .040" dia. pins. Part No. 33-804

Heavy Duty Side Mount Socket

For 4 contact industrial tubes.

22 Series Ultra-Mite Connectors

Square flange plug shell, receptacle insert

Cable plug shell, plug insert

Single hole mount plug shell, plug insert

Cable receptacle shell, receptacle insert

Cable receptacle shell, plug insert

Premium Performance For Every Design Budget

AMPHENOL Ultra-Mite connectors are a complete line of non-environmental (Class N) and environmental (Class P) connectors at prices that fit into every design budget. The connectors are available as straight plugs and square flange, single hole mounting and cable receptacles. Either plug or socket contact inserts may be selected for any of the four available shell styles. High density contact arrangements offer 7, 19, 31 and 61 contacts.

The standard Ultra-Mite insert material is an exceptional low cost plastic capable of withstanding temperature constants of up to 325°F. No-scoop construction, another quality feature, prevents damage to pin contacts in a connector when the mating connector is wiped across its face, as in blind mating connections.

- **Lowest cost** complete High-Density Miniature connector family available.
- High performance-potted constructions meet and exceed MIL-C-26482.
- Completely subminiaturized connectors with high contact density — 61 contacts in a size 18 shell.
- Size 22 Poke-Home contacts
- Lightweight — about 25% that of standard connectors with the same number of contacts.
- All Class "P" receptacles have dynamic O-Ring shell seal.
- Bayonet lock — 3 pin spring loaded coupling ring for quick disconnect.
- Crimp contact terminations.
- 5 key polarization.
- Cable clamps for strain relief.
- Connector identification molded in front and back.
- Natural recess in rear of connector for potting.

Contacts

Ultra-Tac contacts are recommended for best service. Relia-Tac contacts may also be used. See listing on next page for contact specifications.

HARDWARE ACCESSORIES — CABLE CLAMPS

Cable clamps support conductors extending from plugs and receptacles and prevent twisting or pulling of the contact terminations. To order cable clamps, specify the part number of the cable clamp which corresponds to the connector shell size. For example, the correct cable clamp for a 224-16N18-S02 plug is 224-552-18.*

Cable Clamp 224-552-00
Shell Size

POTTING

In "P" connectors, to seal the back of the connectors, potting compound is injected into the back of the shell and allowed to cure. It forms a chemical bond to the inner and outer walls of the connector, to the back of the insert, around the contact terminations and well out along the leads.

Not only is a back shell eliminated, but also the cable clamp. The contact terminations are completely and individually protected by the resilient mass which surrounds them and resists transmittal of vibration to the terminations. The potted assembly is moistureproof and resistant to contaminants.

Ordering Information

CONNECTOR PART NUMBER

To order the 224 Series Ultra-Mite connectors you want, put together the part numbers as illustrated in the following example. All connector part numbers are without cable clamps and potting forms. Order hardware accessories separately.

Plug connectors accept socket contacts only. Receptacle connectors accept pin contacts only. Relia-Tac and Ultra-Tac contacts are not intermateable.

Superior Performance at Low Cost

AMPHENOL Mighty-Mite connectors are low cost, highly reliable micro-miniature connectors designed to serve an exceptionally wide range of cable-to-cable and cable-to-chassis applications.

Mighty-Mite connectors are available as straight plugs, single hole mounting, square flange, and cable receptacles in both standard and environmental constructions. Standard connectors are molded of one-piece, rugged polycarbonate resin. Polysulfone constructions are available for applications involving higher temperatures (up to 325°F) and where repeated contact insertions are required.

Use Relia-Tac pin contacts for receptacles, socket contacts for plugs.

220 Series Contacts

FOR 220, 221, 222, 223, 224 SERIES CONNECTOR

Ultra-Tac Contacts

Top quality micro-miniature contacts. The socket contacts are hooded to resist test prod damage.

Relia-Tac Contacts

Durable, customer-proven contacts.

Wire Form Contacts

The unique 4-member spring design of the pin exerts self-equalizing force on socket wall, reducing contact resistance.

Standard crimp type contacts incorporate gold clad copper alloy wire members in copper sleeves; gold plate finish.

Pin Tail Contacts

Pin Tail Relia-Tac contacts may be used for mounting connectors directly to printed circuit boards. They cannot be used in 224 Series connectors.

Solder Cup Contacts

Can be soldered to leads before insertion or, with proper heat sink, after contacts are assembled.

* Constant to a minimum of 100 cycles of insertion and withdrawal.

Ordering Information

Minimum order quantity is 100 pieces.
Contacts can be supplied on reels for use in semi-automatic crimp machines. Contact factory.

NOTE: Except for the Wire-Form design, all socket contacts are completely shrouded within the plug inserts for optimum protection against damage. Pin contacts are normally exposed when assembled into receptacle inserts. Wire-Form contact pins are to be used in plug inserts and socket contacts in receptacles.

221 Series Strip Connectors

ADAPTABLE TO ANY SHAPE: STACK, CUT, CUT AND STACK, USE AS IS... HIGH CONTACT DENSITY,

(Relia-Tac Contacts Illustrated)

AMPHENOL Strip Connectors are highly reliable, low cost micro-miniatures with great application versatility. They are furnished in 4" and 6" lengths, but you can cut and stack them to whatever configuration you need to satisfy your various application requirements.

If you want, AMPHENOL can do it all for you promptly and economically — cut the connectors to the length you want, make mounting holes, cut leads to length, and crimp, weld, or solder them to the contacts.

Strip connectors use Poke-Home contacts and perform superbly. Where keying is desired, guide pins are inserted in two or more plug strip contact holes.

Because Strip connectors are injection molded, special configurations can be produced quickly and inexpensively.

Strips can be used in stacked arrangement. Should be stacked parallel only.

PC board application using strip connectors.

RELIA-TAC CONTACT OR WIRE-FORM CONTACT
CUSTOM LENGTH
Number of holes multiplied by contact center dimension equals approximate length of strip.

Description	A Contact Centers	B	C	D	E	F Contact Positions

4" Receptacle Strip	.050	.218	—	4.00	.075	80

Ordering Information

Standard and custom lengths.

221 1 5 02

- Series Designation: 221
- Contact Centers: 1—.100 in.; 2—.075 in.; 3—.050 in. (only Nylon)
- Insert Style: 1—Plug, polycarbonate; 2—Receptacle, polycarbonate; 5—Plug, Nylon; 6—Receptacle, Nylon
- Number of Contact Holes needed: from 02 to 60 on .100 centers (standard 6" strip contains 60 holes); from 02 to 53 on .075 centers (standard 4" strip contains 53 holes); from 02 to 80 on .050 centers (standard 4" strip contains 80 holes). **Note:** Must use 2 digits.

Note: Order contacts separately. Use Wire-Form pin contacts for plugs; socket contacts for receptacles. Use Relia-Tac pin contacts for receptacles; socket contacts for plugs.

Strain Relief Strips Protect Wire

AMPHENOL has a solution to the problem of excessive flexing that breaks wire strands in cable-terminated applications. Strain relief strips are available to encase and protect the wire in the crimp area at the rear of the strips. Molded in black Nylon 6/6 material, the strips can be ordered to match any Amphenol strip connector. Held in place by retention pins, which can also be used as a guide pin.

Ordering Information

221-9160—for use with strip connectors on .100 ctrs.
221-9253—for use with strip connectors on .075 ctrs.
221-9380—for use with strip connectors on .050 ctrs.

Mini-Tac Contacts

(Sub-miniature Relia-Tac contacts for .050" center mini-strip connectors only).
Current Rating: 3 Amps.
Wire Size: 26 to 32 ga. stranded wire.

Poke-Home® Guide Pins

Poke-Home guide pins when seated in plug inserts serve functions of polarizing, keying or connector alignment. They can be used in conjunction with either Relia-Tac or Wire Form contacts. Contact factory for information.

LOW PROFILE HOOD

All of the advantages of ribbon contacts apply to Micro Ribbon Connectors. This includes the self-cleaning, self-wiping action of the contacts and extremely low insertion and withdrawal forces. Dielectric is improved diallyl phthalate with high impact strength and low moisture absorbency characteristics. Trapezoidal shells provide polarization, and are made of zinc plated brass with a clear chromate conversion seal. Small size makes the Amphenol Micro Ribbon Connector ideal for high density miniature modules as well as rack and panel applications. Connectors may be top or bottom mounted. Rated 700V DC at sea level; 200 VDC at 70,000 feet.

Rack and Panel and Module Applications. Receptacle mounting plate includes float bushings to allow a float of .020 in each direction. This facilitates blind mating and minimizes the need for critical mounting dimensions.

Cable-To-Panel Application. Panel receptacles are equipped with sturdy spring latches which are guided and retained by cutouts in the plug's flanges. Receptacles must be top mounted. Cable entry at top side, as desired.

SPECIFICATIONS

(Meets requirements of SCL-6020A)

Current Capacity — 5 amps per contact.

Voltage Rating — 700 volts D.C. at sea level.
200 volts D.C. at 70,000 ft.

Operating Temperature — −55°C to +105°C
−67°F to +221°F

Wire Sizes — Solid — 22 gauge max.
Stranded — 24 gauge max.

Contacts — .000030" gold plated over copper flash on cadmium copper base.

Dielectric — Diallyl phthalate per Mil-M-14F Type MDG

Shells — Zinc plated brass with clear chromate coating, trapezoidal shape for polarization. Gold iridescent chrome finish also available.

8	26-182	26-183	—	—	—	—

Tapered design of plug body provides pre-alignment of mating contacts. Dielectric barriers between contacts vary in thickness by minute dimensions to provide polarization. Float bushings allow a float of up to .02 in each direction, facilitating the blind mating common in rack and panel applications. Requires simple rectangular panel cutout.

The eight contact size is also available with a molded key and keyway for polarization. Catalog numbers, 26-182 plug and 26-183 receptacle.

SPECIFICATIONS (Exceed requirements of SCL-6020A)

Current Capacity — 5 Amps per contact
Voltage Rating — 750 volts D.C. at sea level.
300 volts D.C. at 60,000 feet
Operating Temperature — −55°C to +125°C
−67°F to +257°F
Contact Plating — .00002" gold over copper base
Maximum Wire Size — 16 gauge

Plugs and receptacles are molded of high impact diallyl phthalate dielectric with molded-in mounting plates of corrosion resistant passivated stainless steel.

Pin Polarization

26-190-16 26-159-16

Sturdy guide pins pre-align connectors before contact engagement. Pins are of dissimilar size to avoid reverse mating. Float bushings on receptacle allow a float in all directions of .02" to minimize the need for close mounting dimensions and to assist in blind matings. Rated 5 amperes, 750V DC at sea level; 300V DC at 60,000 feet.

Contacts	Plug	Receptacle	DIMENSIONS A	B	C
16	26-159-16	26-190-16	2.442	1.842	2.024

BLUE RIBBON CONNECTORS

AMPHENOL
THE BUNKER-RAMO CORPORATION

26 Series Cable to Panel and Cable to Cable Types

- Low Withdrawal Force
- Low Insertion Force
- Provisions for Safety Wiring
- Secure Spring Latch
- Alternate Positions

Cable-to-Panel Blue Ribbon Connectors include a straight plug, right angle plug, and panel receptacle. The plug is equipped with a spring tension swivel latch to insure mating, even in vibration applications. Provision for safety wiring provides additional reliability.

The nickel plated brass shells are notched to provide keying for alternate positions. The large number of alternate positions available is effectively doubled since the plug and receptacles are available with either a male or a female insert. Add P to the catalog number for a male insert; S for a female insert.

MIN RAC CONNECTORS

AMPHENOL
THE BUNKER-RAMO CORPORATION

17 Series Min Rac® Connectors

- Sub Miniature Rack and Panel
- Choice of Fixed or Removable Contacts.
- Six Styles — Unlimited Variety
- Intermates with all "D" Shaped Sub Miniatures.

A complete line of versatile connectors offering 9 to 98 contacts in a choice of arrangements and dielectrics. Cable housings are available for cable-to-panel or cable-to-cable applications, and several locking devices are offered. These lightweight, miniature connectors are ideal for computers, telecommunications, instrumentation and avionics systems not requiring environmental capability.

Contact Arrangements

FOR ORIGINAL POKE HOME HARD DIELECTRIC FIXED CONTACT AND ENCAPSULATED CONTACT

Contacts

Specifications

ORIGINAL POKE HOME & ENCAPSULATED CONTACT
Temperature Range: −55°C to +125°C.
Current Rating: 7.5 Amps.
Voltage Rating: 500 VAC (RMS) at sea level.
150 VAC (RMS) at 90,000 ft.
Dielectric: Zytel 101 nylon per Mil-P-20693.
Shells: Cadmium-plated cold-rolled steel with clear chromate finish per QQP-416A, Type I. Gold iridite finish available on request per QQP416A, Type II.
Contacts: .00002" min. gold over copper plated brass.
Wire Size: Solder: Up to #20; crimp #20, #22 and #24 AWG.

HARD DIELECTRIC
Temperature Range: −55°C to +175°C.
Current Rating: 7.5 Amps max. (#20 size contacts).
Voltage Rating: 500 VAC (RMS) at seal level.
150 VAC (RMS) at 90,000 ft.
Dielectric: Diallyl phthalate glass-filled per Mil-M-19833, Type GDI-30.
Shells: Same as above.
Contacts: Crimp-type—leaded copper with .00002" min. gold over copper flash plating per Mil-G-45204, Type II. Solder type—brass or silnic bronze with .00002" min. gold over copper flash plating per Mil-G-45204, Type II.
Wire Size: Accepts #20 AWG wire max.

FIXED CONTACTS and POWER & COAX.
Temperature Range: −55°C to +125°C.
Current Rating: 7.5 Amps max.
Voltage Rating: 500V (RMS) at sea level.
125V (RMS) at 70,000 ft.
Dielectric: Glass-filled nylon.
Shells: Same as above.
Contacts: Power—.00002" min. gold over copper plated brass. Coax.—#1 shielded contacts.
Wire Size: Up to #20 wire.

HIGH DENSITY
Temperature Range: −55°C to +135°C.
Current Rating: 3.0 Amps.
Voltage Rating: 500V (RMS) at sea level.
75V (RMS) at 70,000 ft.
Dielectric: Glass-filled nylon.
Shells: See above.
Contacts: Pins—leaded copper with .00002" min. gold over copper flash plating. Sockets—phosphor bronze with .00002" min. gold over copper flash plating.
Wire Size: #24, #26, #28 AWG.

Tools Contact Crimping Tool — **357-100**
Contact Insertion and Removal Tool — **356-200**
Consult factory for proper contact locators and kits for particular contacts being used.

RACK AND PANEL CONNECTORS

AMPHENOL
THE BUNKER-RAMO CORPORATION

126 Series Miniature Rack and Panel Connectors

Heavy duty, reliable, time proven connectors. Dielectric is of melamine. Contacts are gold over silver plated. Voltage rating of types 1 and 2 is 700V RMS between contacts and 600V RMS between contacts and ground with a current rating of 17 amperes. Voltage rating of types 3 and 4 is 600V RMS with a current rating of 7½ amperes.

115 Series

Hinge Action Mating

115-31S 115-30P

Amphenol 115 Series connectors accommodate 50 or 100 No. 16 wires and are nominally rated at 750 volts RMS 60CPS at sea level.

The vise action of the screw lock provides the leverage for easy attaching and disengaging of the plug. The two-piece inserts have molded-in numbers to facilitate wiring and checking of circuits. Receptacle Mounting — the 8-32 assembly screws are located as shown. Panel must be cut out for lead-in at the back of the receptacle

PRINTED CIRCUIT CONNECTORS

AMPHENOL
THE BUNKER-RAMO CORPORATION

2 Series Printed Circuit Receptacles

BURCATED BELLOWS CONTACT PRINTED CIRCUIT CONNECTORS DESIGNED TO MIL-C-21097B
LW MILLIVOLT DROP • NEGLIGIBLE PC CIRCUITRY WEAR

Anenol gold-plated RIBBON contacts — with their smooth glide mating act — incur practically no wear on fragile printed circuitry. Ribbon contac are bifurcated (slit), to guarantee at least two points of electrical contac even with an irregular shaped printed circuit board. The double spring tes n of the ribbon contact, and large mating surface, provides consistent lo ontact resistance, with corresponding low millivolt drop.

.1" CENTERS

Bi cated ribbon contacts are on .156" centers and will accept PC boards of 54" to .071" thickness.

DLLYL PHTHALATE

O piece, flame resistant, glass filled diallyl phthalate. Chamfered throat o ing assists in guiding PC boards to a perfect engagement.

-C-21097B

Aphenol Blue Ribbon PC Connectors represent the most comprehensive nector line designed in accordance to MIL-C-21097B.

LARIZATION

lded keying slots between contact accept polarizing key without loss contact positioning. One nylon key is supplied with each commercial nector.

NTACT ROWS

e Ribbon PC Connectors are available with two rows of separate indeident contacts, or one row of contacts with back-up springs provided proper mating tension. The 43 position size connector is therefore ailable with either 43 or 86 contacts. Double sided contacts with single ls are also available in 6 through 36 sizes.

RMINATION

wide variety of contact tails permit Blue Ribbon Printed Circuit Conctors to be terminated by soldering, or by crimping, of either Poke-Home taper pin contacts.

SPECIFICATIONS

Operating voltage: 600 VAC (RMS) at sea level — 150 VAC (RMS) at 70,000 feet
Current rating: 5 amperes continuous
Test Voltage Between Adjacent Contacts: 1800 VAC (RMS) at sea level — 450 VAC (RMS) at 70,000 feet
Insulation Resistance: 5,000 megohms minimum

Contact Resistance
- Crimp and taper pin terminated — 35 millivolts max. at rated current
- Solder terminated — 30 millivolts max. at rated current

Contact Retention
- Solder terminated — 5 pounds axial load min.
- Crimp terminated — 10 pounds axial load min.
- Taper pin — 15 pounds axial load min.

Dielectric material: Glass fiber reinforced diallyl phthalate — Type SGDF per MIL-M-14
Contact material: Beryllium copper, or phosphor bronze (see below)
Contact plating — .00003" min. gold over copper, or .00005" min. gold over copper.

Dimensions For All Terminations

0	—	Insert less contacts.	—
1	Single row connector with back-up springs.	Insert plus loose contacts for one row plus back-up springs.	Single row connector with back-up springs.
2	Two rows of independent contacts.	Insert plus loose contacts for two rows.	Two rows of independent contacts.
3	Two rows of bridged contacts with two tails.	—	—
5**	Two rows of bridged contacts with one tail.	—	—

** Available in Phosphor Bronze only

CRIMP CONTACT ORDERING INFORMATION
Crimp contacts are available in standard beryllium copper with .000030" gold plating either in bulk or on reels.
Loose contacts—Order part number 225-605-06
Reel contacts (2400 contacts on reel) Order part number 225-605-52400

DEVIATIONS
(115) Deviation is Phosphor Bronze contact material. Available only in solder eyelet.

POLARIZATION (Optional)
If factory insertion of polarizing key is desired, add position of key as suffix here. Key will be inserted to right of contact position shown. Example: 225-20631-10103 (115). Key to right of contact #3).

TAIL STYLE

Digit Group	Style
00	Taper Pin or Crimp
01	Eyelet Solder
03	Straight Dip Solder
05	Right Angle Dip
10	Short Dip Solder
11	Military Dip Solder
12	Open Eyelet Solder

CONTACT PLATING

Digit	Plating
1	.000030" gold over copper (Industrial)
2	.000050" gold over copper (MIL-C-21097)

MOUNTING PROVISIONS

Digit	Provisions
1	.128" clearance holes
2	Float bushings for #4 screws
3	Threaded bushings (4-40)
4	.142" clearance holes (solder type)
4	.250 mounting ears (taper pin)

PRINTED CIRCUIT CONNECTORS

AMPHENOL
THE BUNKER-RAMO CORPORATION

225 Series Receptacles
Solder Termination

AMPHENOL Blue Ribbon Printed Circuit Connectors with solder terminations provide full flexibility of termination th different tail styles—three straight plug-in terminations (.140" and .200" grid), one right angle plug-in termination, and f r e terminations.

Mounting Provision 1

Additional Mounting Provisions

Available in Beryllium Copper

Available in Phosphor Bronze (115)

Taper Pin Termination

AMPHENOL Blue Ribbon Printed Circuit Connectors with taper pin terminations provide flexibility of assembly procedure and ease of circuit modification and repair.

Two arrangement options are available: two rows of contacts for independent opposing circuits or a single row of contacts for single circuits. Single row connectors use separate back-up springs to assure firm mating.

Mounting Provision 1

Additional Mounting Provisions

TAPER PIN TYPE

Tail style 00 accepts #53 pins. Available in beryllium copper only.

Crimp- Poke-Home Termination

AMPHENOL Blue Ribbon Printed Circuit Connectors Poke-Home contacts offer both the economy of crimp tion and the flexibility of removable contacts — an u combination.

Two arrangement options are available: two rows of for independent opposing circuits or a single row of for single circuits. Single row connectors use separate springs to assure firm mating.

Mounting Provision 1

CRIMP POKE-HOME TYPE

Tail style 00 available in beryllium copper only.

64 Series Micro-Edge® Edge Board Receptacles

Micro-Edge contacts will not set. The Micro-Edge will accept even warped boards with firm contact action. Contacts are rounded and will not scrape or injure delicate circuits.

PRINTED CIRCUIT CONNECTORS

AMPHENOL
THE BUNKER-RAMO CORPORATION

133 Series Prin-Cir Plugs

PRIN-R PLUGS flush mount directly to printed circuit boards and elimin any possibility of wear on board circuitry. Used where frequent mating nd disengagement is necessary, or where an unusually low mili-volt d is required. Ideal mating solution for boards of non-standard thickn . Gold over copper plated contacts are on .156 centers and mate with Series PRIN-CIR RECEPTACLES.

The PN-CIR PLUG, when used with the 143 Series PRIN-CIR RECEP-TACL is polarized by removing a contact. Contact removal and the marki of the connector is performed by your AiD, or at the Ampenhol Factor

143 Series Prin-Cir Receptacles

TUNING FORK CONTACT CANNOT BE OVERSTRESSED
.156 CONTACT CENTERS
MATES WITH .054-.070 PC BOARDS OR 133 SERIES PRIN-CIR PLUGS

Tuning fork contact design assures uniform and firm contact action, even with PC boards at extremes of thicknesses.

Gold plated over copper, tuning fork contacts glide over the delicate foil surface of the printed circuitry.

For boards of non-standard thickness, or where frequency of insertion and withdrawal will exceed 500 cycles, it is recommended that the 143 Series PRIN-CIR RECEPTACLE be used with the 133 Series PRIN-CIR PLUG. Contacts are on .156" centers. All sizes are available with a choice of contact tails.

261 Series Low Cost Edgeboard Connectors

True Positioned for Solderless Wrap Termination on Automatic Wrapping Machines

High Performance at Reasonable Cost

These high-performance edgeboard connectors provide dual readout of double-sided printed circuit boards. The pre-loaded cantilever type contacts are assembled into the dielectric with precise spacing to permit automatic solderless wrap termination. The phosphor bronze contacts have a minimum of 50 micro-inches of gold at the contacting surface. This results in extremely low contact resistance and permits over 500 insertion and withdrawal cycles without loss of continuity or significant increase in resistance.

An Extensive Line

- 15 to 43 positions providing up to 86 contacts
- Choice of .100", .125", .150", .156" or .200" spacing
- Choice of tail sizes: .025" sq., .035" sq., or .035" x .050".

Electrical Characteristics

Contact Spacing	Current Rating (Max.) Amps	Contact Resistance (Max.) Milliohms	Voltage Rating (Sea Level)	Voltage Breakdown (Min.)
.100" on Center	5.0	6.0	300 V RMS	1800 V RMS
.125" on Center	5.0	6.0	350 V RMS	2000 V RMS
.150" on Center	6.0	5.5	400 V RMS	2500 V RMS
.156" on Center	7.5	5.0	400 V RMS	2500 V RMS
.200" on Center	7.5	4.5	500 V RMS	4500 V RMS

SPECIFICATIONS

Block Material: Medium impact, electrical grade phenolic.

Contact Material: Grade A Phosphor Bronze with 50 micro-inches minimum thickness of gold on contacting surfaces.

Keying: Available on .200, .156 and .150 centers. On .125 and .100 centers key replaces one pair of contacts.

Tail length: Sufficient for three wire wraps plus space for bussing on PC board next to block. (See dimension G.)

230 and 240 Series Snap-Wrap® and Mini-Wrap® Connectors

Permits Any Configuration Designed

Snap-Wrap (230 Series) and Mini-Wrap (240 Series) connectors are based on a modular design concept which permits AMPHENOL to accommodate practically any configuration as a standard product. Design your own interconnection system using AMPHENOL's building block concept.

The base plate, available in various finishes, can be shaped, formed, notched or have any kind of cutouts or mounting holes you need to fit your space and components. Holes may be punched (or omitted) in many configurations, including either military or commercial patterns with spacing of .200" x .200", .150" x .150", .150" x .075", .125" x .125", .100" x .100" or .100" x .050".

nphenol ASTRO/348 MIL-C-81511* High Density Connectors

phenol designed out the costly space-wasters in removable-tact connectors when we invented Astro/348. Problem-sing metal retention clips for each contact are gone. Instead, single one-piece molded dielectric retention system locks e-Home contacts in place. Originally designed as a high sity subminiature, Astro/348 turned out to be the best h density miniature and standard connector ever made. acks more contacts of every size into standard shells than other design. MIL-C-81511 has established the standard nector family for the next decade.

R EXAMPLE

re's what Astro/348 in a size **18 shell** can give you:

Astro/348	Closest Alternative
85 #23-22 Contacts	67 #22M Contacts
37 #20 Contacts	32 #20 Contacts
19 #16 Contacts	11 #16 Contacts

l at less cost, and in less space, for each circuit carried.

LARGER ON THE INSIDE

The single-piece retention disc gives other excellent advantages in addition to density. Dielectric wall thicknesses in the sub-miniature #23-22 contact arrangements **are equal to standard miniatures.** With greater density, #20's, #16's and #12's provide dielectric separation comparable to standard miniature and and power connectors.

FIGHT SCOOPING

Scooping means that pin contacts in a connector can be damaged when the mating shell is accidentally wiped across the pin connector face. Astro/348 is available in two constructions: "50%" and 100% No-Scoop. 50% No-Scoop means that scooping is impossible when the pin contacts are in the receptacle shell (this is normal usage). In 100% constructions, scooping is impossible whether the pin contacts are in the plug or the receptacle.

The last four lines have 100% No-Scoop Design.

Mated Connectors Dimensions (inches)

Mated Plug and Square Flange Receptacle

Mated Plug and Square Flange Receptacle with Cable Support

Grounding Fingers

Shell-to-shell grounding is estal lished by beryllium spring finger permanently fixed to the 50% No-Scoop receptacle shell and th 100% No-Scoop plug shell. Thes spring fingers, spaced 16 to th inch (Exception: Keyways in 50% No-Scoop), cause contact to b maintained during mating an unmating .090 inch before an after engagement.

Hardware Availability: Straight cable clamps dummy receptacles, caps and chains are available for all shell sizes both 50% and 100% no-scoop.

Tools for contact crimping, insertion and removal available.

HIGH DENSITY CONNECTORS

MINIATURE CIRCULAR CONNECTORS

AMPHENOL
THE BUNKER-RAMO CORPORATIO

48 Series High-Reliability, Environment-Resistant Connectors

MIL-C-26500 PERFORMANCE

48 Series Regular

MIL-C-38300 PERFORMANCE

48 Series Ultra-Mate

Hermetically Sealed Receptacle

SIGNIFICANT ADVANCE IN STATE-OF-THE-ART

On the ground or in space, wherever there is a requirement for superior environmental protection, high reliability, and minimum weight and bulk, 48 Series miniature environment-resistant connectors are the answer.

In developing this series, Amphenol faced the problem of satisfying reliability, logistics, and present and anticipated environmental requirements for connector usage. To solve the problem, Amphenol had to generate advanced design concepts, formulate materials specifically for connector usage, and work out new production techniques. The resulting connectors exceed the stringent requirements of MIL-C-26500 (USAF) and MIL-C-38300 (USAF) for performance and reliability.

FULL PERFORMANCE IN EXTREME ENVIRONMENTS

Advance materials technology and complete environmental sealing enable these remarkable connectors to:

- Operate continuously at 200°C (392°F)
- Withstand thermal shock cycling from −55°C (−67°F) to 260°C (500°F)
- Support 1500V RMS from sea level to 350,000 ft., mated
- Maintain environmental and electrical integrity during and after 0 to 2000 CPS vibration during exposure to 200°C (392°F) and −55°C (−67°F)
- Withstand physical shock of 100 gravity units
- Resist corrosion, ozone, sand and dust

ULTRA-MATE CLOSED ENTRY AND FRONT SERVICING

Ultra-Mate connectors are identical to the other connectors in the 48 Series, but the socket inserts have a hard face of glass-filled epoxy. They are the first to combine the positive reliability of closed entry with the speed and convenience of front servicing. In addition, the MIL-C-26636 contacts are tamper proof. Wrong-size contacts or oversize test prods cannot be inserted in the hard dielectric contact entryways on the socket inserts.

OUTSTANDING DESIGN FEATURES

Complete Environmental Sealing — 48 Series connectors a fully sealed against extreme environmental conditions.

Amphenol-developed, silicone rubber dielectric provid resilience and unsurpassed resistance to tear, compression s fluids and high temperatures.

When the connectors are mated, insert faces compress form a resilient dielectric seal around each individual contac A continuous barrier on the periphery of the socket insert mat with a recess around the pin insert to form an additional con pression seal. A dynamic "O" ring seal between mated shel constitutes still another barrier to dirt and moisture, and pr tects the integrity of the face seals. Together with monobloc construction, this puts void-free, continuous dielectric aroun each contact through the entire connector length.

Monoblock construction, with bonded interfaces between th dielectric components (insert, anti-deflection disc, and grommet eliminates air voids and protects connectors from degradin moisture and altitude conditions. A pressurizing seal aroun each contact at the major O.D. prevents the passage of air o moisture through the contact hole, and triple sealing riser de sign at each wire hole in the grommet seals each individual wire

Go/No-Go Reliability — When an Ultra-Mate connector i mated, you can be sure there is proper contact. The socke contacts are closely surrounded by hard dielectric with a chamfered entry to guide in the pins accurately. However if the pins are bent, the hard dielectric presents a closed entry and prevents mating.

Light Weight and High Contact Density — Connector shells are impact-extruded aluminum forgings with a high strength-to-weight ratio. The insert arrangement is designed for the maximum number of contacts within the area available.

Poke-Home Contacts — Poke-home contacts (from release, rear insertable) provide for easy servicing of connector circuits without disassembling the connector from its mounting, or disturbing adjacent contacts. MIL-C-26636 contacts are crimped quickly, consistently, and reliably with either hand or power tools. They have high electrical conductivity, present a smooth configuration, and completely protect electrical contact pressure-members from environmental and handling damage. The contacts come in sizes 20, 16, 12 and shielded, with rhodium-over-silver plating. (Other platings such as gold are available; write factory for details.)

See Table of available inserts
Hermetics are available in receptacle shell style "X3" (MS24265) and "X5" (MS27034).
The 48 Series part numbers for Ultra-Mate connectors (MIL-C-38300) are 48-XXCXX-XXSX and 48-XXRXX-XXPX(145). MIL-C-38300 connectors are furnished without cable clamp. If a cable support is desired, it must be ordered separately.

Military Standard Part Numbers

You can use MS as well as Amphenol part numbers in ordering 48 Series connectors. The MS part numbers for MIL-C-26500 connectors are worked out on the basis shown in the table below. Whether you order by the MS or the 48 Series number, all qualified connectors are shipped with the MS marking.

The part numbers for MIL-C-38300 connectors start off with the identification M38300/ and take the form M38300/XXXX-XX. To determine the specific M numbers, refer to military specification MIL-C-38300.

Poke-Home Contacts and Tool Applications

CONTACTS — When you order 48 Series connectors with contacts, the contact package contains enough contacts to complete the insert arrangement and have at least 2 spares left. The package also includes enough sealing plugs for at least 15% of the contacts in the insert, in any case a minimum of 3 sealing plugs. To provide proper sealing, insert unwired contacts and sealing plugs in all unused holes. (Use a #12 contact for a #1 shielded hole.) To order contacts and sealing plugs separately use the part numbers in the table below. Contacts may also be ordered in reels for use with automatic crimping tools.

TOOLS — Note that various tools are available for crimping, inserting, and removing each size contact.

THE BUNKER-RAMO CORPORATION

67 Series MinniE Environment Resistant Connectors

Miniature, Quick-Disconnect, Bayonet-Lock Connectors

E
With unitized grommet for individual use seal

P
Includes potting mold

C
Vise action with two screw strain relief

Environmentally Sealed

- Choice of unitized back end grommet or provision for potting. Both exceed moisture resistance requirements of MIL-C-0515.
- Face seal gasket has individual barriers to isolate each contact.
- No derating for altitude is required up to 70,000 feet if the sealed connectors are mated.
- Sealed connectors take 1500 V RMS at 70,000 feet.
- Vibration resistance per Method 204, MIL-STD-202A is 10 to 2,000 cps at 20 G's.
- Temperature cycling range per MIL-C-5015 is −67°F to
- +257°F.

Lightweight and Convenient

- Flattened incline angle of bayonet slots makes mating easier.
- Clamp and grommet combine to form a unitized seal for ease of assembly and maintenance.
- Connectors convert easily from E style to P style and vice versa.
- Yellow ring on receptacle shell gives visual indication of connector engagement.
- Weight is about half that of standard connectors with same number of contacts.
- Seventeen different insert configurations are available.
- Alternate insert positions are available.

Efficient and Long-Lasting

- Spring-loaded coupling ring provides positive locking acti in bayonet slot and a constant compensating force to count act compression set of resilient face seal.
- Stainless steel bayonet slots and pins reduce wear and frictio Three-pin bayonet coupling minimizes rocking action of t mated plug and receptacle.
- Hooded female contacts resist test prod damage.
- Hard insert dielectric and resilient face seal on pin inse positively retain contacts so there is no possibility of the being pushed out of the insert.

Hermetically Sealed

Hermetically sealed 67 Series connectors are available in two shell styles — hex nut mounted receptacles. Each shell style is available in 11 different insert configurations with up to 48 contacts.

Available in hermetically sealed receptacles.
Also available with Poke-Home contact insert.
Current rating—#20 contact: 7.5 amps, #16 contact: 12 amps.
Shielded contact: 7.5 amps.

All inserts listed here are available for all shell styles and classes except hermetics. Inserts available in hermetically sealed receptacles are indicated by an asterisk. (The first two digits of the insert number show the shell size; the 3rd and 4th digits are a code for the insert configuration.)

R.F.I. Shielded Connectors

Special internal hardware enables these 67-06J style connectors to have the braid of a shielded cable terminated within the connector backshell. Alodine plated per Amphenol Specification 617 Type "C", the shell has a conductive finish and acts as a continuation of the cable braid.

The following R.F.I. Shielded connectors are now in production:

67-5009 Size 18 shell with 24 #20 pin contacts
67-5011 Size 20 shell with 37 #20 pin contacts

These two connectors are also available with crimp Poke-Home contacts in the same insert configurations.

The mating receptacles are standard except for the Alodine finish. This can be obtained by ordering deviation (113). For other 67 Series connectors with R.F.I. shielding, consult factory.

67-906 and 67-907 Poke-Home MinniE Connectors

Removable Poke-Home crimp contacts are available in the 67-906 receptacle and 67-907 plug. They use standard 67 Series hardware (67-00E receptacle 67-06E plug, size 14) to take 12 #20 contacts and oversize contact pockets to accept larger diameter wire. The front insert is neoprene and the contact retention disc is nylon.

ALTERNATE INSERT POSITIONS

STANDARD CIRCULAR CONNECTORS

AMPHENOL
THE BUNKER-RAMO CORPORATIO

165 Series Miniature MS-Type Connectors

COMPACT AND CONVENIENT

Connectors in the 165 Series are only about one-third the size and weight of standard MS connectors with the same number of contacts.

Bayonet coupling provides quick disconnect.

WIDELY APPLICABLE

Eight different insert configurations and five different shell styles in two sizes — large and small — provide enough variations for a wide range of applications.

Plugs and cable receptacles are available with either a buil n cable clamp to provide positive strain relief or with provision r potting. On all connectors, alternate insert positions are av.- able for gang mounting.

WEATHERPROOF AND PRESSURE PROOF

When mated, 165 Series connectors are pressure proof and co- pletely waterproof. The connectors using female inserts feat a sandwich construction with the insert spun into a cartridge; t connectors are factory sealed to prevent leakage. O-ring se are used in both plugs and receptacles. They meet the exacti pressure seal requirements of MIL-C-5015, Class C constructi

Connectors with Shielded Contact and Ground Shield

- Important in aircraft and instrumentation applications, for example, fuel gaging.
- Shield continuity was recently upgraded by additon of heat treated beryllium copper finger pressure members to the socket shield.
- Available in a number of shell styles, including potting construction plug and cable receptacle, plugs with spring-loaded coupling ring, and square flange receptacle.
- Available also in combination of environmentally sealed and cable clamp construction.
- Two different insert configurations
  Eight #20 contacts, 1 shielded contact
  Nineteen #20 contacts, 1 shielded contact

182 Series Hermetic Miniature MS-Type Connectors

Mate With 165 Series

Type 2 Threaded Back Shell

Type 1 Solder Flange Shell

HIGHLY RELIABLE

The 182 Series features a rugged compression seal which is extremely strong and highly resistant to thermal shock; it also has very high insulation resistance. To assure strictest adherence to requirements, 182 Series receptacles are tested by mass spectrometer at the maximum sensitivity of the instrument.

WIDELY APPLICABLE

Like 165 Series connectors, 182 Series receptacles come in two sizes — large and small — and are available in most 165 Series insert configurations. There are two shell styles — Type I, Solder Flange, and Type II, Threaded Back Shell, with and without O ring. There are two types of contacts available: solder pocket, and flat and pierced. Alternate insert positions (shown at right) allow for gang mounting.

THERMOCOUPLE CONTACTS (FOR BOTH 165 AND 182 SERIES)

Special Thermocouple contact inserts are available for use in 165 and 182 Series connectors. Consult your Amphenol Sales Representative for any you may require.

NOMENCLATURE

The MS prefix (for example, MS3100) in a connector part n ber indicates an approved connector under the curent mili y specification, MIL-C-5015.

A 97 prefix indicates that the connector is an exclu e Amphenol design of A, B or C construction, probably a c nector with special purpose contacts and a variation from S requirements or one for which no MS part number has t been assigned.

A 246 or 69 prefix indicates an environment resistant c nector with crimp Poke-Home® contacts. These connect which are intermateable and interchangeable with standard S types, offer improved "R" performance over MIL-C-5 requirements.

Interchangeability of MS and AN Connectors. In accorda e with MIL-C-5015, "Connectors bearing an MS part num may replace an AN marked connector of any modificat marking if all other identifying symbols are identical." Howev if a contract requires use of connectors with the formerly proved AN marking, there are still available from Amphen.

FINISHES

The standard finish is cadmium plate with olive drab chrom conversion coating. This finish has excellent conductivity.

INSERTS

The dielectric material used in inserts for A, B, and C constru tions is diallyl phthalate. It has near perfect dimensional st bility, high arc resistance, and maintains high insulati resistance under both humidity and thermal stress.

Insert material in R construction connectors is MIL approv neoprene. This resilient insert material provides an environme tally sealed connector that exceeds MIL-C-5015 performanc

CONTACTS

Standard — MS contacts under MIL-C-5015 are silver plat and have pretinned solder pockets. Amphenol also offers optional a superior gold plating process for MS contacts.

How to Order:

EXAMPLE: To get a straight plug with 35 contacts in a size 28 shell with black anodized finish and contacts to accept taper pins order 97-3106A 28-15S(432) (608).

MS 3101 A 28-21 S Y (847) (639)

SERIES NUMBER
MS—Military Standard for A, B, C, E, & R construction
97 Like MS, but AMPHENOL exclusive design for A, B, & C construction
69 —For E & R construction

SHELL TYPE
3100—Wall Receptacle
3101—Cable Receptacle
3102—Box Receptacle
3106—Straight Plug
3107—Quick Disconnect Plug
3108—Angle Plug

SHELL CONSTRUCTION
A—Solid
B—Split
C—Pressurized
R—Environment resistant
E—Environment resistant
Omitted in ordering construction for potting.

INSERT NUMBER — Consists of

SHELL SIZE
8S, 10SL, 12S, 12, 14S, 14, 16S, 16, 18, 20, 22, 24, 28, 32, 36, 40, 44, 48
(Size is "A" thread in 16ths)

CONFIGURATIONS
Code numbers (from 1 up) for insert configurations.
Note: Code numbers are specific for each shell size. The same code number represents different configurations in different shell sizes.

SHELL FINISH
Omit for standard finish
(604)—Anodized with bichromate seal
(608)—Black anodized
(639)—Clear cadmium plate

DEVIATION FROM STANDARD
Omit this suffix if standard construction desired
(02) —High -temperature silicone compound } Insert Materials
(04) —High-temperature phoenolic (360°F) } Insert Materials
(23) —High-temperature silicone compound } Insert Materials
(115)—Small Flange Receptacle
(231)—Small Flange Receptacle, pressurized
(258)—Connector furnished with protective caps assembled to both ends.
(288)—Connector furnished with protective cap on mating end.
(426)—Gold over silver plating on contacts.
(432)—Taper pin terminal contacts.
(438)—Construction for potting.
(496)—High temperature construction.
(847)—Contacts plated .0001" min. gold over copper, marked with date of manufacture.

ALTERNATE INSERT POSITION
Omit for standard position.
W, X, Y, or Z for alternate positions, depending on insert.

Environment Resistant MS Connectors

This complete line of "E" and "R" environment resistant connectors satisfies aircraft and missile requirements as well as most applications calling for sealed components. The difference in the two types is that the "E" type has an integral MS type cable clamp as part of the connector back shell.

The "E" type meets or exceeds the "E" requirements of MIL-C-5015. Contacts and resilient inserts are factory preassembled in the shell. The integral MS type cable clamp provides extra strain relief.

The "R" type meets or exceeds both the "E" and "R" requirements of MIL-C-5015. Construction of the grommet and back shell assembly provides a great measure of wire support, eliminating the need for a cable clamp in most applications. This design also results in a size and weight reduction.

46, 238 and 208 Series

New AMPHENOL Connector Series with Crimp Removable Contacts for MIL-C-5015E and Many Other Requirements

	246 Series MS340X, Class R	238 Series MS340X, Class K	208 Series Proposed MS340X, Class D and T
Application	General purpose Environmental	Aircraft firewalls and other extreme temperature situations	General purpose. High temperature and/or fluid environments
Special Features	Environmental resistant	Environmental Resistant Withstands 2000°F flame. Resistant to fuels, lubes and contaminating fluids	Environmental Resistant Resistant to high temperatures, fuels, lubes, and contaminating fluids
Overall Specification	MIL-C-5015E	MIL-C-5015E	To be included in MIL-C-5015E
Temperature Range — Extended Operation	125°C (257°F) down to −55°C	Class T: 200°C (392°F) down to −55°C (−67°F) Class K and D: 175°C (347°F) down to −55°C (−67°F)	
Shell	Aluminum — Cadmium plated followed by black chromate conversion	Cold rolled steel — Black Chrome plated over nickel	Aluminum — Black anodized
Dielectric	Resilient parts of special neoprene rubber. Retention disk of nylon	Resilient parts of fluorosilicone rubber. (Class T Vinyl Silicone) Retention disk of high-temperature glass-filled dielectric	
Contacts	Standard MS90453 pins and MS90454 sockets		
Tools	Standard MS3191 crimp MS90455 insertion and MS90456 removal tools		
Versatility	Can be intermated, intermounted, interchanged with any AN or MIL-C-5015 connector

3400 Receptacles

3406 Plugs

How to Order:

To get the specific connector you want, put together the part number as per the following example. For the military part number, use the letters MS as the series designation. For the Amphenol part number, use 208, 238, or 246 as applicable.

246 - 3406 R 28 - 21 P W 101

SERIES
MS—Military Standard
246—General Purpose Environmental
238—2000° Flame Resistant
208—High Temperature Fluid Resistant

SHELL STYLE
3400—Wall Receptacle
3401—Cable Receptacle*
3402—Box Mounting Receptacle*†
3406—Straight Plug

CLASS
R—General Purpose Environmental (MS or 246 only)
K—2000°F Flame and Fluid Resistant (MS or 238 only)
T—High Temperature 200°C (208 or 238 only)
D—High Temperature 175°C Fluid Resistant (208 only)

DEVIATIONS
101—Connector less contacts

INSERT POSITION
Blank for normal position MIL-C-5015E

CONTACT TYPE
P—Pin **S**—Socket

INSERT CONFIGURATION
Per MIL-C-5015E
See above for available inserts.

Note: Cable clamps and accessory hardware are ordered separately or by Amphenol deviation.
*Not available in 238 Series Class K.
†Contact factory for availability.

STANDARD CIRCULAR CONNECTORS

AMPHENOL
THE BUNKER-RAMO CORPORATION

Caps - 97 Series

Two types of protective caps are available for use with MS Connectors:

Cap & Chain — For use when MS Connectors are not in use. The 9760 is made of aluminum with an olive drab chromate conversion seal and is available for either receptacles or plugs. To order the cap less chain, add the suffix G to the catalog number.

Disposable Dust Caps — Expendable polyethylene dust caps provide added protection to precision built MS Connectors during storage or shipment or completed apparatus.

Automatic Ordering — A disposable cap may be ordered with any MS Connector by adding the suffix (288) to the catalog number of the connector.

ORDERING INFORMATION

MS Connector Size	CAP & CHAIN For Engagement On		DISPOSABLE DUST CAP For Mating End	
	Receptacles 9760-	Plugs 9760-	Receptacles 97121-	Plug 97121-
8S	-8	-8P	-208	-308
10S	-10	-10P	-210	-310

Thermocouples - 97 Series

For MS Connectors

Designed to provide a disconnect in thermocouple circuits without the introduction of dissimilar metals.

There are six thermocouple insert configurations. Each of these utilizes an equal number of iron and constantan contacts. However, any MS Connector with size 16 contacts may be ordered with any of the contacts listed at right. For ease in wiring, each thermocouple contact is color coded on the solder cup end of the contact.

Contacts	Description	Color Code
Alumel	94% Nickel, 2.5% Manganese, 2% Aluminum, 1% Silicone, .5% Iron	Orange
Constantan	45% to 60% Copper, 40% to 55% Nickel, 0 to 1.4% Manganese, .1% Iron	Red
Copper	87.5% to 90% Copper, 1.8% to 2.2% Lead, .1% Iron, .5% Nickel, .5% Normal Impurities and balance Zinc	Yellow
Iron	84.4% Iron, 2% Sulphur, .4% Silicone, 2% Carbon, 3.6% Manganese, .6% Phosphor, .1% Copper, .9% Tin	White
Chromel	90% Nickel, 10% Chromium	Green

MS Fittings Cable Clamps, Adapters

AN3057 Cable Clamp — Standard cable clamp, threads onto all MS Connectors with threaded back shell. Provides reliable sturdy support. Illustration does not shown one rubber and two fiber washers which seats clamp to connector.

AUTOMATIC ORDERING — By adding deviation number (559) to the MS catalog number, the correct AN3057 cable clamp will be shipped with the MS Connector.

Basic 9767-X — Identical to AN3057 cable clamp, but the rubber washer and one of the two fiber washers are replaced with a rubber boot. Recommended for applications in which cable is subject to considerable flexing.

9767-X-X Weatherproof Cable Clamp—Same as BASIC 9767-X above with addition fo AN3055 reducing adapter. The inside of the AN3055 is tapered to the same dimensions of the front end of the rubber boot — this providing a weatherproof seal.

AN3055 Reducing Adapter — Permits smaller cable clamps to be used with MS Connectors.

AN3420 Bushing — Rubber bushing designed specifically for MS3057A Cable Clamp. Protects wire bundle and unjacketed cable from possible damage by a cable clamp. Can also be used for a reducing bushing.

MS3057A Cable Clamp — For rubber covered cable or wires protected by tubing. Both clamping halves float so cable is always centered, affording maximum strain relief. With unjacketed cable or wire bundles without tubing, use corresponding AN3420 Bushing.

Common MS Deviations

MS Connectors are available with minor deviations from standard. Deviations are ordered by adding the deviation suffix to the MS part number. Deviation numbers always appear in parenthesis.

(288) Includes 97-121 dust cap for mating end.

(417) Plugs only, type W washer cemented.

(426) Minimum of .00002" gold over .0002/.0003" silver on contacts. Use 97 prefix instead of MS.

(432) No. 16 contact. For use with AMP No. 53 taper pin. Use 97 prefix instead of MS.

(559) AN 3057 cable clamp included with connector.

(639) Cadmium plate finish wtih clear chromate conversion seal. Use 97 prefix instead of MS.

(866) Contacts with minimum of .00002" gold over. 0002/.0003" silver with tinned solder cups.

MS Potting

MS Connectors for potting are available in all connector styles except the MS3102. The back shell of the connector is removed and replaced with a potting mold retainer ring No. 9755-270-XX. (XX indicates connector size.) This describes the basic (438) construction.

ORDERING INFORMATION

Since the solid or split back shell is removed from the connector shell prior to potting, the A and the B is dropped from the part number of an MS potted connector.

For example: 97-3106-18-11P (596) or 97-3101-14S-4P (438)

Since the potting construction does not fall under Military Specifications unless so indicated under the special marking column, the prefix 97 is used.

PECIFY ASTROplate — for BRAWN and BEAUTY in RF Connectors

CAUSE ASTROplate IS SPACE-AGE NEW!

years the industry has searched for a tough finish to replace er plate in commercial instrumentation, communications ipment, cable connections and the countless applications there for RF connectors. Today's applications demand the advant- s of precious metal without its softness and susceptibility to rosion. Now it's here—developed by Amphenol—world lead- n RF connectors. *It's a totally new finish.*

roplate — better than silver

lusive, new, non-tarnish finish. Under salt-spray tests (per L-Std. 202), Astoplated components have been exposed to r 400 hours without evidence of corrosion. Samples have ergone many times the standard four-hour potassium sulfide osure without showing tarnish. Under the same conditions, er tarnishes in less than one-half hour. Excelling also in abra- resistance, Astroplate measures between 200 and 350 on Vickers Hardness Test vs. 70 to 155 for silver plate. Ideal for h temperature applications, Astroplate withstands over 2500°F.

Astroplate — interchangeable with silver

Fully compatible, Astroplate presents no galvanic corrosion problem when mated with silver, and its tested solderability (MIL-Spec QQ-S-365) is equal to that of silver.

recision 7mm Connectors — APC-7

APC-7. Precision 50-ohm connector for use with 7mm (inner liameter of outer conductor) rigid air line and semi-rigid ALJAK) coaxial cable.

Sexless coupling permits interconnection of any two APC-7's. dentical plane of electrical and mechanical contact permits ac- urate determination of the electrical length of a mated pair or f an air line assembly with a connector at each end. All com- onents held captive.

Connectors packaged in pairs in protective wooden box; as- sembly instructions and certified SWR test report included with each pair.

Specifically designed for microwave and precision test equip- ment, manufacturers now using APC-7 fittings include: Alford, Alfred, EG&G, Hewlett-Packard, Maury Microwave, Microlab/ FXR, Narda, PRD, Rantec, and Weinschel Engineering. For further information, request Catalog PIC-2.

CHARACTERISTICS (TYPICAL)

ELECTRICAL (for mated pair): **Impedance:** 50 ohm ± 0.1 ohms. **Frequency Range:** 0-18 GHz. **SWR:** 1.039 max. to 18 GHz. **Insertion loss (in db):** $<7 \times 10^{-3} \sqrt{\text{Freq. GHz}}$ (example: 0.028 db at 16.0 GHz). **RF Leakage:** <signal inside coaxial line by ratio >120 db▲. **Electrical length:** 0.723 ± 0.001 inches (1.836 ± .00254 cm). **Contact Resistance:** inner: <1.0 milliohm, outer: <0.1 milliohm.
▲RF Leakage: Until satisfactory test methods are developed, the maximum frequency of measurement is limited to 6.0 GHz.

ENVIRONMENTAL: **Thermal Limits:** storage: —67° to 158°F (—55° to 70°C) operating: 55° to 91°F (13° to 33°C). **Humidity:** 20 to 80% RH. **Pressure:** 590 to 780 mm Hg. MECHANICAL: **Mating:** sexless, coplanar by means of threaded ring housed within coupling nut. **Life:** >5000 connect/disconnect operations.

MATERIAL: **Coupling Mechanism:** stainless steel. **Body:** gold plated beryllium copper. **Center Contact:** gold plated beryllium copper. **Bead Assembly:** Rexolite insulation.

For use with	Part No.	Maximum SWR For a Mated Pair	Dimensions, Inches a	Dimensions, Inches b
7mm air line	131-1050	1.039 to 18 GHz	5/64	13/16
131-182 (.325) semi-rigid ALJAK cable	131-1019	1.10 to 12.4 GHz	1 53/64	13/16

Short and Open Circuit Terminations

Reflection coefficient 0.9995 minimum. Reference plane for opens is 1.25mm ±0.2mm beyond face of electrical mating plane.

Part No.	Description	Dimensions, Inches a	Dimensions, Inches b
131-1206	short, less coupling mechanism	3/4	11/16
131-1205	short, with coupling mechanism	1 1/8	13/16
131-1204	open, less coupling mechanism	3/4	11/16
131-1203	open, with coupling mechanism	1 1/8	13/16

APC-7 Tool Kit

TOOL KIT 131-2025

APC-N Plugs and Jacks

131-10005

131-10006

131-10003

131-10004

APC-N. 50-ohm connectors. Use interchangeably with APC-7; mate with all other type N's. Their excellent electrical performance will make them an "industry standard" for future equipment. SWR for mated pairs: only 1.06 through 12 GHz; 1.08 through 18 GHz.

CHARACTERISTICS (TYPICAL)

ELECTRICAL (for mated pair APC-N connectors). **Impedance:** 50 ohm ± 0.2 ohms. **Frequency Range:** 0-18 GHz. **SWR:** 1.08 max. to 18 GHz. **Insertion Loss (in db):** $<3x10^{-2}\sqrt{\text{Freq. GHz}}$. **RF Leakage:** <signal inside coaxial line by ratio >90 db▲. **Contact Resistance:** inner: <1.0 milliohm; outer: <1.1 milliohm.

▲**RF Leakage:** Until satisfactory test methods are developed, the maximum frequency of measurement is limited to 6.0 GHz.

ENVIRONMENTAL: **Thermal Limits:** storage: —67-158°F (—55-70°C); operating: 55-91°F (13-33°C). **Humidity:** 20 to 80% RH. **Pressure:** 590 to 780 mm Hg.

MECHANICAL: **Mating:** 5/8-24 threaded coupling. Mating dimensions are MIL-C-39012 Class II nominal with tighter tolerances. The APC-N mates with all existing Type N connectors including MIL-C-71.

MATERIAL: **Body and Coupling Nut:** stainless steel. **Cen Contacts:** gold plated beryllium copper. **Bead Assemb** Rexolite insulation.

For Use With	Con-fig.	Maximum SWR For a Mated Pair	Part No.	Dimensio Inches Lgth.	O

Subminax Series 27

Amphenol's Subminax connectors and Amphenol subminiature coaxial cables provide designers of miniature instrumentation with complete RF series of matched, constant-impedance connectors and cables possessing the same electrical efficiency and reliability as standard-size RF components.

The Subminax line comprises two distinct, non-mating series: the 27 Series and the 5116 Series.

27-70

27-5

CHARACTERISTICS

ELECTRICAL: **Impedance:** 50 ohm, 75 ohm. **Frequency Range:** 0-10 GHz. **Voltage Rating:** 500 volts peak. **Dielectric Withstanding Voltage:** 1,500 volts rms. **SWR (50 ohm):** 1.2 (0-4 GHz); 1.5 (4-10 GHz); 1.3 (UG's) (0-6 GHz); 1.5 (UG's) (6-10 GHz). **Other:** multivolt drop 6 MV. insulation resistance 1,000 megohms.

ENVIRONMENTAL: **Thermal Limits: —67° to 390°F** (—55° to 199°C). **Weatherproof:** all 27 series are non-weatherproof, radial crimp have plastic boot or optional heat shrink tubing. **Hermetic Seals:** pass helium leakage test of 2×10^{-8} cc/sec. **Thermal Shock:** Mil. Std. 202 method 107. **Shock:** Mil. Std. 202 method 202. **Vibration:** Mil. Std. 202 method 204 (test cond. D). **Moisture Resistance:** Mil. Std. 202 method 106A. **Corrosion:** Mil. Std. 202 method 101 (test cond. B).

MECHANICAL: **Contacts:** radial crimp, not cap tivated; quick crimp, full captivated; field servic able, semicaptivated. **Mating:** push-on (snap-on and screw-on, (50 ohm have 10-32 threaded coup ling; 75 ohms, 5/16-32). **Cable Affixment (Braid Jacket):** radial crimp: Quick-Crimp (hex crimp) field serviceable clamp mechanism. **Cable Affix ment (Center Conductor):** solder only. **Couplin Nut:** recommended torque (hex nuts); 50 inch ounces. Axial pull-off force: withstand up t 50 lbs.

MATERIAL: **Contacts:** male and outer (push-on) brass female: beryllium copper. **Other Metal Parts** brass. **Plating (All Metal Parts):** .000050 gold ove copper, (UG's .0001" gold over copper). **Insulators** Teflon, Kel-F-Teflon, glass Teflon (hermetically sealed).

MILITARY SPECIFICATIONS: UG items fully compl with MIL-C-22557A.

Series MB

Very small bayonet-lock connectors with an overall length that, with few exceptions, measures under an inch. Of particular importance to the user are the excellent electrical and mechanical performance parameters offered at low cost. Crimp designs offered require no special crimping tools; a simple pair of standard pliers will do the job. Plugs in this series have female contacts; jacks have male contacts. For further information, request Catalog CC-7.

CHARACTERISTICS, typical

ELECTRICAL: Impedance: non-constant; **frequency range:** 0-500 MHz. **Voltage rating:** 500 v. peak.

ENVIRONMENTAL: Thermal limits: Kel-F: —67° to 390°F (—55° to 199°C); nylon: —67° to 300°F (—55° to 149°C). **Weatherproof:** all MB series are non-weatherproof. **Hermetic seal:** pass helium leak test of 2 x 10^{-8} cc/sec.

MECHANICAL: Mating: 2-stud bayonet lock. **Cable affixment:** hooded, jacket or standard braid clamp and nut; inner jacket crimp.

MATERIAL: Contacts: male: brass; female: beryllium copper. **Other metal parts:** brass. **Plating: all metal parts except contacts:** except as noted, nickel .0001" min. per QQ-N-290. **Contact plating:** except as noted, .0002" silver min. **Insulators:** as noted, Kel-F, nylon or teflon.

BNC/TNC

BNC's are small, lightweight, quick-disconnect bayonet lock coupling connectors. MIL-Crimp BNC's are recommended as the optimum BNC, giving optimum operating performance at low installed cost. Using standard crimping tools, these units can be assembled in a fraction of the time usually required for braid-clamp type connectors by eliminating critical assembly and soldering operations and reducing the parts to handle. Captivated center contacts prevent circuit discontinuity under environmental or mechanical stress. MIL-Crimps are weatherproof; their constant 50-ohm impedance provides excellent performance through X-band frequencies.

Series C

CHARACTERISTICS

ELECTRICAL: Impedance: 50 ohm constant. **Frequency Range:** 0-10 GHz, 1,500 volt type; 0-2 GHx, 4,000 volt type. **Voltage Rating:** 1,500 volts peak—standard; 4,000 volts peak as noted. **Dielectric Withstanding Voltage:** 3,000 volts RMS, 1,500 volt type; 6,000 volts RMS, 4,000 volt type. **SWR:** 1.25.

ENVIRONMENTAL: Thermal Limits: —67° to 390°F (—55° to 199°C). **Weatherproof:** except as noted, all C Series connectors are Weatherproof. **Hermetic Seals:** pass helium leak test of $2x10^{-8}$ cc/sec. **Pressurized:** compression sea

MECHANICAL: Mating: 2-stud bay net lock. **Cable Affixment:** Improved: scre thread nut and braid clamp.

MATERIAL: Contacts: male: brass; female and outer: beryllium copper. **Oth Metal Parts:** brass. **Plating:** .0002" silver min. **Insulators:** Teflon, glas Teflon (herm. sealed). **Weatherproof Gaskets:** silicone rubber.

MILITARY SPECIFICATIONS: Meet applicable sections of MIL-C-3989.

Series N

Medium-size, weatherproof, threaded coupling units that may be used in systems up to microwave. This series was the original microwave connector developed during World War II and SWR is consistently low across this broad frequency spectrum. Available in Regular, Improved and Improved/Captivated Contact constructions and have the MIL-Crimp/MIL-Clamp designs to MIL-C-39012. For further information, request Coaxial Connectors Catalog CC-7, or contact your distributor.

CHARACTERISTICS

ELECTRICAL: Impedance: as noted, 50 or 70 ohms. **Frequency Range:** 0-11 GHz. **Voltage Rating:** 1,500 volts peak. **Dielectric Withstanding Voltage:** 2,500 volts rms. **SWR:** MIL-Crimp/MIL-Clamp: 1-15 (solder) 1.35 per spec; others; 1.25. **Other:** contact resistance 1.0 mv, RF leakage —90db, insertion loss .15 db, insulation resistance 5,000 megohms.

ENVIRONMENTAL: Thermal Limits: Teflon: —67°F to 390°F (—55° to 199°C); Rexolite: —67°F to 185°F (—55° to 85°C). **Weatherproof:** all Series N with gasket are weatherproof. **Hermetic Seals:** pass helium leak test of 2 x 10^{-8} cc/sec. **Pressurized:** compression seal. **Shock:** MIL-Std. 202 method 202. **Vibration:** MIL-Std. 202 method 204 (test cond. B). **Moisture Resistance:** MIL-Std. 202 method 106. **Corrosion:** MIL-Std. 202 method 101 (test cond. B). **Temperature:** MIL-Std. 202 method 102 (test cond. C). **Altitude:** MIL-Std. 202 method 105 (test cond. C).

MECHANICAL: Mating: 5/8-24 threaded coupling. **Cable Affixment (Braid or Jacket):** MIL-Crimp: hex crimp; all others: screw-thread nut and braid clamp. **Cable Affixment (Center Conductor):** MIL-Crimp/MIL-Clamp: 4 indent crimp, hex crimp or solder. All others: solder. **Captivated Contact:** all MIL-Crimp/MIL-Clamp; others, where specified. **Cable Retention:** MIL-Crimp/MIL-Clamp 90-120 lbs. (70 lb. per MIL-Spec). All others 30-70 lbs.

MATERIAL: Contacts: male: brass; female: MIL-Crimp/MIL-Clamp phosphor bronze; all others: beryllium copper; Outer: MIL-Crimp/MIL-Clamp. Improved phosphor bronze, all others: brass or phosphor bronze. **Other Metal Parts:** brass. **Plating:** center contacts, MIL-Crimp/MIL-Clamp: .0001" gold over .0001" copper, all other: .0002" silver. **Insulators:** Teflon (all MIL-Crimp/MIL-Clamp) Rexolite, glass-Teflon (herm. seal). **Weatherproof Gaskets:** silicone rubber (all MIL-Clamp) synthetic rubber. **Crimp Ferrule:** copper.

MILITARY SPECIFICATIONS: MIL-Crimp/MIL-Clamp: MIL-C-39012; Standards: MIL-C-71B.

RF COAXIAL CONNECTORS

AMPHENOL
THE BUNKER-RAMO CORPORATION

Series HN

Amphenol HN Series are constant 50 ohm impedance connectors designed for high voltage applications. Connectors are weatherproof and are available in Regular, Improved and Improved/Captivated Contact constructions.

Amphenol's patented Captivated Contact Design prevents possible contact recession under temperature extremes. Contacts are fixed within the connector body by front and rear contact insulators that butt against metal body parts.

CHARACTERISTICS, TYPICAL

ELECTRICAL: Frequency range: 0 — 4GHz. **Voltage rating:** 1,500 volts peak; **dielectric withstanding voltage:** 5,000 volts rms. **SWR:** 1.3.

ENVIRONMENTAL: Thermal limits: Teflon insulation: —67° to 390° (—55° to 199°C); Rexolite insulation: —67° to 185°F (—55° to 85°C). **Weatherproof:** all HN Series are weatherproof. **Hermetic seals:** pass helium lead test of 2×10^{-8} cc/sec. **Pressurized:** Compression seal.

MECHANICAL: Mating: ¾ —20 threaded coupling. **Cable affixment:** screw-thread nut and braid clamp.

MATERIALS: Contacts: male: brass; female: beryllium copper; **body:** brass; **other metal parts:** brass. **Plating:** .0002" silver min. **Insulators:** Teflon, Rexolite, glass-Teflon (hermetic seal). **Weatherproofing gaskets:** synthetic rubber; silicone rubber.

MILITARY SPECIFICATIONS: HN Connectors meet applicable sections of MIL-C-3643.
